THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27] JANUARY, 1927 [NUMBER 1

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

CONTINUED seasonal contractions in employment were recorded at the beginning of December. The losses however were less than those reported on the corresponding date in 1925, when the index number was considerably lower. The situation was, in fact, better than on December 1 in any of the years from 1921 to 1925. This statement is based on returns received by the Dominion Bureau of Statistics from 5,895 firms each with a minimum of fifteen employees in industries other than agriculture and fishing. These firms employed 832,847 persons on December 1, as compared with 847,282 in the preceding month. The index number (based upon numbers employed in January, 1920, by the reporting employers, as 100), stood at 101.1, as compared with 102.8 on November 1, 1926, and with 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the office of the Employment of Canada indicated a decline in the number of transactions during November as compared with the proceeding month, while an increase is shown when comparison is made with the volume of business in November, 1925. The number of placements effected during November, 1926, was 28,338, as compared with 40,453 in October, 1926, and 25,796 in November, 1925. At the beginning of December 1926, the percentage of unemployment among members of local trade unions stood at 4.7, as compared with percentages of 2.6 at the beginning of November and 5.7 at the beginning of December, 1925. The percentage for December, 1926, is based on returns received by the Department of Labour from 1,501 local trade unions, with aggregate memberships of 149,627 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.18 at the beginning of December, as compared with $11.01 for November; $11.56 for December, 1925; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined slightly to 150.5 for December, as compared with 151.5 for November; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); 223.4 for December, 1919; and 205.6 for December, 1918.

The time loss caused by industrial disputes in December was less than during November, 1926, and also less than during December, 1925. Eight disputes were in progress at some time during the month, involving 167 employees and resulting in the loss of 3,778 working days. Corresponding figures for November were as follows: eight disputes, 902 workpeople and 8,320 working days, and for December, 1925, nine strikes, 1,532 workpeople and 20,903 working days.

Industrial Disputes Investigation Act, 1907

During December the Department received reports from Boards of Conciliation and Investigation appointed in connection with disputes between (1) the Canadian National Railways and certain of its employees in parlour and dining car service, members of the Canadian Brotherhood of Railroad Employees; and (2) the Canadian National Railways and certain of its employees on the Montreal wharf, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. A Board was established during the month to deal with a dispute between the Corporation of the City of New Westminster, B.C., and its employees in the Municipal Fire Department. Particulars of the recent proceedings under the Act are given on page 17.

Combines Investigation Act, 1923

On December 20 the Minister of Labour announced the appointment (P. C. 1876) of Mr. L. V. O'Connor, barrister, of Lindsay, Ontario, as Commissioner under the Combines Investigation Act to investigate the Proprietary Articles Trade Association and the business in Canada of those manufacturers and wholesale and retail druggists who are members of this Association. Following Mr. O'Connor's appointment, Mr. A. R. McMaster, K.C., was appointed by the Minister of Justice to conduct the investigation before the Commissioner.

Hearings were opened in Montreal on January 7, continuing throughout the day. The P.A.T.A. was represented by Sir William Glyn-Jones, assisted by Mr. J. C. McRuer, of Toronto, Mr. F. S. Mearns, of Toronto, and Mr. Alex. Cinq-Mars, of Montreal, barristers, and Mr. Harry Hereford, industrial engineer.

Wages, hours of labour and prices in Canada 1920-1926

Two supplements are included with this issue of the LABOUR GAZETTE. The first deals with Wages and Hours of Labour in Canada, 1920 to 1926, including the following classes of labour: (1) building, metal, printing, electric railways, civic employment, and longshoremen; (2) mining, lumbering, electric power, telephone; and (3) factory labour in various industries. The second supplement deals with the movement of wholesale and retail prices and changes in the cost of living in Canada and various other countries in recent years.

Bulletin on Employment Services Convention

The LABOUR GAZETTE for October, 1926, contained a note on the fourteenth annual convention of the International Association of Public Employment Services, which was held at Montreal on September 16-18, 1926. The Department of Labour has just published and distributed a bulletin containing the proceedings of this meeting. As its name implies, the association is composed of the officials of governmentally conducted free employment offices throughout the United States and Canada. The Montreal convention was the third of its fourteen annual meetings to be held in Canada. The bulletin contains verbatim reports of the papers and addresses delivered to the meeting and a digest of the discussions which took place, including interesting material on a number of phases of public employment office work. A limited number of the bulletins are available for distribution and will be sent to interested persons who have not already received copies, on application.

Home Economics in Vocational Schools

Bulletin No. 18 of the Vocational Education Series has just been issued by the Technical Education Branch of the Department of Labour. This publication is entitled Home Economics in Canadian Vocational Schools and contains descriptive articles and outlines of courses indicating the nature, scope and value of the training and education provided for girls and women in secondary vocational schools receiving grants under the Technical Education Act.

Industrial situation in 1926

A review of employment conditions in Canada during the past year is given on another page. The Dominion Bureau of Statistics, in a general summary of industrial and business situation, stated that the year 1926 ended under conditions much more favourable than prevailed throughout 1925 and preceding years. The factors contributing to this result included the bountiful crops of the last two years, the improved conditions in other countries with which Canadian external trade is carried on, especially the United States, and the rapid development in progress in the power and paper industries. The index of industrial employment was consistently maintained at a high level throughout the year. Carloadings were much above normal during the first eleven months. Construction showed considerable variation even after allowance is made for seasonal tendencies, but on the whole was exceptionally active. The primary iron and steel industry operated at a moderate level somewhat above normal. Bank debits after usual adjustments indicate a high level of business activity during most months. While the crop harvested in 1926 was slightly less valuable than that of the preceding year, it is a rare occurrence for two such bountiful crops to be produced two years in succession. The decided improvement in industrial lines in the last quarter of 1925 was maintained during 1926. This was amply shown by the index averaging 20 per cent more during the first 10 months of 1926 than in the corresponding period of 1925. In manufacturing, the only month during 1926 when maintenance of the high level was threatened was in August. During September and October, the decline of the preceding month

was counterbalanced, and the index for manufacturing attained a higher level than in any other month during the post-war period.

The total value of the imports during the first 10 months of 1926 was more than 13 per cent greater than in the corresponding period of 1925. In view of delay in threshing operations during August and September, caused by adverse weather conditions, as well as the shortage of shipping arising out of the British coal strike, exports of Canadian produce during recent months were less than in the corresponding period of 1925. The total exports during the first 10 months were valued at 2.5 per cent more than in 1925. The railways shared in the prosperity of Canada during 1926. The crop of 1925, one of the largest in the history of Canada, was moved to ultimate markets in part during the first nine months of 1926. Active industrial conditions also contrbiuted to the heavier traffic movement of the year under review.

Canada's mineral industries yielded a new record output in 1926 when the value of production reached $242,886,000 an advance of 7.1 per cent above the total of $226,583,333 reported for 1925, according to the official estimate compiled by Mr. S. J. Cook, chief of the mining, metallurgical and chemical branch of the Dominion Bureau of Statistics. The previous high record of $227,859,665 was established in 1920. Metal mining showed great strength and steadiness throughout the year. Non-metallic minerals, other than coal, at a value of $24,841,000, were up 10 per cent from the total in 1925. Coal production showed a gain of 3 million tons and conditions in the industry throughout the year seemed much improved. There was little loss of time due to strikes, the total under this item standing at about 40,000 man-days as compared with a time loss of 1.57 million man-days in 1925. Employment showed a gradual upward trend in the coal mines of the maritime provinces and only a slight seasonal loss due to lessened production during the summer months from the mines of the prairie provinces.

The volume of construction in 1926 was the largest recorded since the high records of 1912 and 1913 were established. Contracts totalling $372,947,900 were awarded or $74,974,900 more than in 1925, being an increase of 25 per cent.

According to the *Canadian Fisherman* the total catch of Lunenburg fishing fleet, Nova Scotia, was the largest on record, but lower prices for fish and severe weather reduced the profits of the fishermen. The pack of salmon shipped from Vancouver showed an increase of nearly 100 per cent over 1925. The lumbering industry was in a somewhat unsettled condition during the year, the result, it is stated, of over production and price cutting, the market being affected also by the prolonged coal strike in Great Britain.

Workmen's Compensation in Ontario in 1926

In 1926 65,916 accidents were reported to the Ontario Workmen's Compensation Board, as against 60,012 in 1925. The fatal cases increased from 345 in 1925 to 400 in 1926. An investigation of the reports to the Compensation Board shows that a great many more cases have been reported involving medical aid only. From this it appears that many accidents formerly dealt with as first aid cases at the plant are now being reported to the Board for medical aid. In 1926 the total compensation awarded was $5,821,351.90 or nearly $300,000 more than in 1925. During 1926 silicosis and compressed air or caisson disease were added by the Board to the list of industrial diseases and very considerable expenditures were made in 1926 in connection with the payment of claims for silicosis. There has also been a marked increase in the amount paid for medical aid in 1926, the total having been $988,486.70 or slightly over $112,000 more than in 1925. The total medical aid for 1926 amounted to 21 per cent of the benefits awarded by the Board in Schedule 1.

Mr. R. B. Morley, general manager, Industrial Accident Prevention Associations, states that the accident prevention associations formed under Section 101 of the Workmen's Compensation Act plan to continue their work and hope for a continued reduction in the more serious type of accident. Over a period of years, death cases and permanent total and permanent partial disabilities have shown a decrease, which in itself, has encouraged the executive committees of the various accident prevention associations to continue their present plan of campaign.

Injunction confirmed in Vancouver picketing case

The British Columbia Court of Appeal, in a judgment handed down on January 4, sustained the judgment of Mr. Justice Gregory in the Supreme Court last May in the case *Schuberg versus Local No. 118 International Alliance Theatrical Stage Employees et al.* Mr. Justice A. Martin and Mr. Justice M. A. MacDonald dissented from the judgment of the Court of Appeal. An outline of this case in its earlier stages, and of the judgment of the Supreme Court, was given in the LABOUR GAZETTE, June, 1926, page

624. The facts of the case were as follows: Schuberg, the owner of the Empress Theatre at Vancouver had for a long time employed only seven stage hands, and when he gave notice that after a certain date he would employ only five, this announcement proved unsatisfactory to the stage hands and to their local union, and a strike followed. The owner then engaged five new employees, and the union thereupon placed men at the entrance to the theatre, who distributed handbills addresed to the "theatre-going public of Greater Vancouver," stating in large type that "the Empress Theatre is unfair to organized labour." The union also caused motor cars and sandwich men, displaying signs and banners bearing the same statement, to parade before the entrance to the theatre, "watching and besetting" the theatre. During the continuance of these acts the volume of business at the theatre was materially reduced.

Judge Gregory found that the actions of the union were done with the intention of injuring the plaintiff's business and in the hope that to save himself from such injury he would return to the employment of the seven stage hands. He cited the decision of the Alberta Supreme Court in a similar picketing case which was outlined in the LABOUR GAZETTE for November, page 1156, accepting that decision as applicable in the present case. He therefore granted an injunction and $1,750 damages against the union. At the hearing before the Court of Appeal counsel for the union contended that the act relating to trade unions legalized peaceful picketing. On the other hand, section 501 of the Criminal Code made it a crime to watch and beset with a view to compulsion. It was conceded, on behalf of the union members, that they watched and beset the Empress Theatre.

The text of the judgment of the Court of Appeal will be given in the next issue of the LABOUR GAZETTE.

Collection of labour statistics

The government of British Columbia has recently issued regulations under the Department of Labour Act, 1917, prescribing the form in which statistics of wage-earners employed in trades, industries, etc., are to be returned by employers. Employers are to state the total salary and wage payments for the year (1) to officers, superintendents and managers; (2) to clerks, stenographers, salesmen, etc.; (3) to wage-earners (including pieceworkers). The actual number of wage-earners (male and female) on the payroll on the last day of the year is to be given, with the average number for each month of the year. The nationality of employees on the payroll for the week of greatest employment is also to be stated on a special form. A feature of the return is a form that will enable the Department to make an accurate classification of employees in the Province in groups according to the amount of their average weekly rate of wages. Employers must state the number of employees in receipt of wages under $6 weekly; from $6 to $6.99 weekly; from $7 to $7.99 weekly, and so on to the highest paid group receiving $50 weekly and over. The number of employees is to be shown for each sex, subdivided into groups under and over 18 years of age. The number of apprentices is also to be given separately from that of the minor employees. The return calls also for information as to the number of hours per week normally worked by wage earners; and as to the number of weeks in the year in which the industry or trade was active. Another form is to be filled in, showing the normal rates of wages paid to the different classes of male labour employed for the past two years.

Home work in clothing industry in New York

A special bulletin (No. 147) has been published by the Department of Labour of the State of New York which estimates the extent to which home work is carried on in the men's clothing industry, with particular reference to New York City and Rochester. The men's clothing industry is the largest home-working industry in the State. Home work is referred to in the report as one of the "most insidious industrial hazards," because of unregulated hours, low wages and absence of control of child labour. New York and other American States maintain certain legal standards for home work, but in practice such work is difficult to control. Instability of employment is characteristic of home production. In "inside shops" in New York, for example, 33 per cent of the home workers employed at the peak of the fall season are laid off during the slack period which follows, in contrast to 14 per cent of factory workers. In contract shops 43 per cent of home-workers, as compared with 24 per cent of factory workers, are "let out." Per capita earnings of home-workers average from $9 to $13 a week. New York home-workers average $12.11 per week in inside shops, $10.39 in contract shops; Rochester inside shops, pay home-workers an average of $13.76 per week, contract shops, $9.31.

Regulation of home work in Canadian provinces

The Factory Acts of several Canadian provinces regulate the conditions under which home work may be carried on. The Ontario and Alberta acts, for example, contain the following provision:

> Every person contracting for the manufacture of any garment, article of clothing or wearing apparel or any part thereof, or giving out the same to be wholly or partially altered or improved, or giving out for manufacture, alteration or improvement, material from which the same are to be made up or completed, shall keep a written register of the name and address serially numbered of every person so contracted with, or to whom any such garment, article or material is so given out, and of the places where the work is to be done. The register shall at all times be open to inspection by the inspector, and the person required to keep it shall furnish a copy of the register to the inspector.

The Alberta act provides that the registers mentioned in the last paragraph are to be presented monthly, and that notice must be given of any additions thereto. In Ontario the register is to be produced on demand by the factory inspector. The Ontario Act also contains special provisions governing home work in towns or cities having a population of 50,000 or over. Garments may not be received for manufacture, alteration or improvement without a permit from the factory inspector, and no person may expose for sale any garment made in a dwelling house without a permit stating that the place of manufacture is thoroughly clean and sanitary. The permit states the maximum number of persons allowed to work on the premises. Articles manufactured under sanitary conditions may be seized and destroyed. Working places in Alberta may be visited by the inspector, and if conditions are not favourable the inspector may prohibit the manufacture from giving out work to be done in such premises.

The Factory Act of British Columbia provides that employers in any industry coming under the Act who sublet contracts or give out materials to be made, altered or repaired at any place other than a factory, must keep a register of all such work and the location of the place where it is to be performed. The register is to be open to the inspector at any time, and he is expected to see that such work is performed under proper sanitary conditions.

The Industrial Establishments Act of Quebec exempts "domestic workships" unless they are classified by the Lieutenant Governor in Council as "dangerous, unwholesome or inconvenient."

Pensions recommended for public employees

The Citizens' Research Institute of Canada recently completed a survey of municipal affairs at St. John, New Brunswick. The report, which was presented to the Municipal Council by Dr. Horace L. Brittain, makes numerous recommendations, among which is one for the establishment of a pension system for the members of the fire and police departments in which all members of the force would be obliged to take part. It points out that in view of the high proportion of older men on the permanent force, the city would have to make a sufficient contribution to meet any drain on the funds from this cause. At the present time no provision is made for retiring members of the force, or for compensation in case of sickness or accident sustained while on duty. The members however may have a voluntary association governed by a board of trustees.

The report points out that the scale of pay for the firefighters at St. John is similar to the scales at Halifax, Quebec, Montreal, etc., although the conditions of work differ; in Halifax men get one day off in five; in Quebec and Montreal the two platoon system is used. "Call" men receive $225 per year at St. John; foremen receive $240, and district engineers about $300 per annum. "Call" men who work in districts where calls are numerous receive the same remuneration as those who are in districts where calls are infrequent. Permanent men are on duty 24 hours a day, with exception of time off for meals, and receive one day off in eight, with 14 days holidays during the year. They receive one suit and one cap a year, but have to provide themselves with rubber boots, coats, etc., necessary for the fighting of fires.

Accidents to municipal employees in British Columbia

The Workmen's Compensation Board of British Columbia has made a second levy on the cities and municipal corporations of the Province, the two levies however together constituting only one-half the possible rates of assessment. The second levy was necessary because of an increase in the number of accidents among workers in Class 14 ("Municipalities"). The last annual report of the Board shows that in 1925, 312 claims were passed for total temporary disabilities in this class, involving payment of $22,388; for permanent partial disabilities there were ten awards, involving $21,653; and in connection with one death the sum of

$6,063 was paid, the final awards in respect to Muncipal employees involving an expenditure of $50,005. The branch of municipal work most exposed to accident risks is that engaged in "operation and maintenance" of streets, roads, paving, parks, etc., in which there were 187 compensable accidents in 1925; in the construction or extension of waterworks, sewers, electric railways, etc., there were 44, and in the fire and police departments there were 37 accidents (including one death). Any surplus at the end of the year on the second levy will be added to the amount received from the first levy for 1927.

Origins of welfare movement in industry

Professor James A. Coote, of McGill University, Montreal, describes recent progress in the practice of "industrial engineering" in an address reprinted in the *Canadian Textile Journal*. The new science had its origin in the work of F. W. Taylor, an American engineer who died in 1915. As superintendent of the Midvale Steel Company's works he developed new processes in the cutting of metals, and obtained a formula by which the time required for a given piece of work could be predetermined. His chief work in these directions was contained in two papers, entitled "On the Art of Cutting Metals," and "A Method of Shop Management." Mr. Taylor was followed by numerous imitators and "efficiency experts," whose work is passed over lightly by Professor Coote. The chief result of these activities was the discovery of the great importance of "labour turnover" in industry. It was found that in some plants labour turnover amounted to over three hundred per cent a year; that is, in order to maintain a working force of 100 men 300 men were hired in one year. In a Canadian plant, for thirty jobs two hundred and fifty men were hired in six months. It was also discovered that it cost from $30 to $75 to hire and train a new worker to replace an old one, this cost being made up of broken tools, spoiled work and the reduced output due to new and strange surroundings as well as to inexperience.

To the discovery of the importance of "labour turnover" Professor Coote attributes the recent growth of "welfare work" in industry. "The new worker," he says, "is taken to his new surroundings and introduced to his new comrades; the ways of the establishment are explained in a manner to impress him with their reasonableness and not as rules whose infringement brings punishment. Every effort is used to make the newcomer feel at home as soon as possible and shorten the breaking-in period. Everyday conditions must be such that they do not make the worker dissatisfied or cause him to lose interest. Here comes in the effect of good lighting, proper ventilation, suitable toilet facilities, locker rooms for his belongings, etc, etc. These represent the bare necessities. After these come the provision of lunch rooms where the workers can eat their lunch in clean and comfortable surroundings; then the serving of hot drinks, soup, etc.; and then the restaurant serving full meals. The best practice is not to give the workers these things free of charge but to provide them at cost. From these we go on to things that may be regarded as luxuries such as rest rooms, music, games, etc. It is certainly not the duty of industry to provide these things but if their provision is going to make the industrial establishment a place where life is enjoyable instead of drudgery they may be a profitable investment." Professor Coote notes however that "all of those things, important as they are cannot take the place of sufficient wages. If the provision of these service features is intended to make the workers content with lower wages the effort will be wasted. Nothing will take the place of the pay envelope unless it is satisfaction with the job itself."

New principles governing wage rates

A favourable account of the business situation in the United States as the New Year began is presented by Mr. John W. O'Leary, president of the Chamber of Commerce of the United States in the *Nation's Business* for January. Despite depression in some major industries, he finds a higher degree of general prosperity in the country just now than has ever existed in the past. This conclusion was reached after conference with business leaders and with government officials. "There seems," he says, "to be no disagreement on the facts regarding fundamental soundness of business. Credit is ample for legitimate needs. Inventories are low. Economy in national government is releasing funds for reduction of debt and at the same time reducing taxation. Notwithstanding exceptional consumption of merchandise and extension of consumer credit, our savings are growing. Confidence in the honesty and integrity of business is continuing and restrictive laws are giving way to self-regulation.

"Within the memory of the majority of the readers of this article the beginning of a period of deflation or business slump brought first a reduction in wages. The immediate result was a lower cost, but the consequent reduction of purchasing power of the wage

earner soon brought further restriction of volume and consequent increase of cost.

"The new philosophy which appeared consciously or unconsciously at the beginning of the after-war deflation reversed the process of reducing cost. Every factor entering into cost was analyzed, and improvement in method, elimination of waste, and standardization were put into practice. The determination to defer wage cuts until all other factors had been dealt with was uppermost in the mind of the American employer. The employee co-operated with enthusiasm. The resultant team work brought lower commodity prices. We began to understand the differences between money wage and real wage. We developed a new term, 'consumer purchasing power.' We liked it sufficiently to cultivate it. The expansion of a century-old method of merchandising, 'instalment credit,' added to the consumer purchasing power and the prosperity begun under a new wage philosophy was extended.

"The record of the last two years is not an accident. It is not a windfall, a piece of good luck, or an evidence that fortune habitually smiles upon us with special favour. The cold record of statistical facts shows to all who wish to know that for the measure of national prosperity which has come in the last two years we worked hard. We have striven to make each application of labour produce more than it ever produced before. We have been exerting ourselves to get greater efficiency. In that effort the figures show that we have been successful. There is no other possible explanation for the upward course of the wage level in the United States since 1919 and the downward course of the price level. For different industries the federal Department of Labour has been making some studies through which it shows striking increases in productivity. The Secretary of Commerce has pointed out in the report which he published at the end of November that the railroads have recently been performing 43 per cent more work, in ton-miles of freight moved, than in 1913, but with only 2 or 3 per cent more employees."

Effects of power production in industry

The December issue of *Industrial Management* (New York) contains a survey of recent industrial developments, resulting mainly from new applications of mechanical power, together with a series of charts illustrating recent changes in the relative value of horse power and man power, and consequent variation in the rates of production, wages and profits. "Mankind's conception of industry," it is stated," has in very recent years, undergone a revolution." Industrial managers "have outgrown the habit of thinking in a fixed groove of low wages, high prices and plentiful, cheap labour. They have learned that while prosperity may start at the top, it will not long remain prosperity unless it penetrates all along the line down to the great mass of the people. They have discovered the immensely important fact that high prices curtail buying, and that any attempts to lower prices by reducing wages, again curtails buying. Instead of closing their eyes to that obvious fact, and trusting that the lessened purchasing power of their own workers will not affect the incomes of those who buy the product, these men know that the circle is bound to complete itself sooner or later. These are the industrial leaders who are mapping out a substantial, progressive programme for every industry and every plant to follow."

Industrial Management recommends industrial executives, in planning their work for 1927, to turn their attention to extending the applications of mechanical power and specialized machinery. "Each additional horse power provided per worker in industry, has increased over a ten-year period the net annual output value of that worker by thirteen hundred and ten dollars. There is no price inflation in this remarkable figure, the fluctuation of the dollar value of product having been compensated for in arriving at it. Men do not work as hard now nor as long hours as they did ten years ago, yet production per man is thirty-four per cent more than then throughout all industry because we are learning how to utilize power more effectively. Mechanical and electrical power are far more stimulating to production than is man power. Also a horse power can be employed for about one-twentieth the amount of a man's wages. The big problem management to-day and the keynote to the programme for 1927, is to increase the ratio of horse-power to man power and to apply this additional power to production through improved machinery."

Some of the facts that are shown in the charts are as follows:—

Industrial plants are becoming larger, but fewer in number: for 10 plants in 1914 there were only 7 in 1923. The output per worker in 1914 was $5,430, and in 1923, $6,900.

The total "man power" in American industry rose from 7,024,000 in 1914 to 8,778,000 in 1923. Man power increased 24.9 per cent; horse power increased 47.6 per cent, and production increased 58.8 per cent.

For every wage earner at work in American industry 3¾ horse power is also at work. An increase of 18 per cent in horse power per wage earner in 1923 as compared with 1914, resulted in a 34 per cent increase in output per wage earner.

Although production in 1923 was 34.4 per cent greater per worker than in 1914, it was less per dollar of wages paid, because wages increased faster than value of output.

Proposed arbitration acts in Sweden

At the beginning of 1926, the Government then in power in Sweden appointed a committee of nine members, including representatives of the Government, the Federation of Trade Unions and the Employers' Federation, to enquire into the problem of industrial peace. A change of Government which took place in the spring did not affect the enquiry. According to newspaper reports, the present Government intends as soon as possible to introduce proposals for compulsory arbitration in disputes concerning the interpretation of collective agreements. A special Court, it is stated, would be set up for this purpose, and no appeal to a higher authority would be allowed against its decisions except on questions of procedure. The Court would be given power to impose fines and fix compensation which, if need be, would be demanded of the organizations concerned. It would also be entitled to supplement the provisions of existing collective agreements, if these were found to be inadequate or not clear in any particular respect, and in exceptional cases to allow either of the parties to terminate an agreement before the period covered by it has expired, if there have been any important or unexpected changes in the economic conditions on which the agreement is based. For disputes relating to conditions of work, on the other hand, it is not thought that there is sufficient ground for the general adoption of arbitration. Such legislation would be necessary only for disputes involving the vital functions of the community. In such cases, however, the workers would have to be guaranteed fair wages and satisfactory conditions of work, so that the system of arbitration and the consequent prohibition of strikes might not be regarded as a means of preventing an improvement in the workers' standard of living.

Bills embodying these proposals, it is stated, will be introduced in the Riksdag at the earliest possible date, but not before the 1928 session.

Industrial Peace Union in Great Britain

An organization known as the "Industrial Peace Union" has been founded in Great Britain by Mr. J. Havelock Wilson, President of the National Union of Seamen. Its objects are stated to be:—(1) To promote permanent peace in industry, based on justice and sympathy; (2) To foster the spirit of fellowship and co-operation between employers and employed; and (3) To work for the improvement and greater security of the conditions of industry and the maintenance of a satisfactory standard of living.

The Union is stated to aim at securing for every individual who has entered into a contract by collective bargaining the right to work, as well as to withhold his labour by proper termination of such contract by regular legal notice. In the event of any undue pressure being brought to bear by industrial action which threatens the life of the community, the members of the Union are asked to pledge themselves to the support of a constitutional Government for the preservation of law and order. The Industrial Peace Union also intends to undertake educational propaganda (incluing the knowlege of simple economic facts), to co-operate in welfare work, and to provide for the registration of all members of the Union who are willing to help in times of national emergency.

Superior Labour Council of France

The French Superior Labour Council held its 30th Session on November 15, 1926, and the following days. This Council is composed of representatives of employers and workers, with a small number of representatives of the Chamber of Deputies, the Senate, the Chamber of Commerce in Paris, the Sorbonne and the Co-operative societies, the Minister of Labour being the President. It acts as a national consultative committee of the Government on all questions relating to industry and labour. Since the establishment of the Council in 1891 the Government has considered hardly any question relating to the conditions of labour without submitting it first to the examination of this body. On the question of the responsibility of the employer who engages a worker who is already bound to another employer by a contract of service, the Council unanimously adopted the following resolution:—

When a wage-earner wantonly breaks a contract of service and engages himself to another employer, the new employer is wholly responsible for the damage caused to the previous

employer in the following cases: (1) When it is proved that he was directly implicated in the action of the worker in quitting his previous employer; (2) when he has engaged a worker whom he knew to be bound by a contract of service; (3) when he continues to give employment to a worker, after having learnt that such worker is still bound to another employer by a contract. In the third case, responsibility does not lie on the new employer if, at the moment when he is notified, the contract wantonly broken by the wage-earner has expired, or if a period of 15 days has elapsed since the rupture of the contract.

The Council considered the question of restrictions on the activity of a wage-earner after the expiry of his contract of service, and adopted the following resolution on the subject:—

Any clause in a contract of service which forbids the employee or the worker, after the expiry of his contract to carry on an undertaking on his own account, to obtain employment with other employers, or to join an association or partnership with a view to carrying on some personal undertaking, is null and void.

Both during the contract and after its expiry, the employee or the worker must abstain from divulging to a competitior or any other person the manufacturing or business secrets of the employer, or from himself engaging or co-operating in any act of unfair competition.

National Industrial Conference Board of the United States

The National Industrial Conference Board, during the first ten years of its existence, has established itself as one of the chief agencies in the United States for scientific industrial research. Frequent use has been made in the LABOUR GAZETTE of reports published by the Board (May, 1919, page 633, etc.).

The report of the treasurer for the last fiscal year, recently received, indicates the extent of the services rendered by the Board to the managers of industry. "Probably there is no organization in the world," he says, "other than the National Industrial Conference Board, that has been provided with funds, contributed voluntarily, for strictly research purposes as to conditions affecting the national prosperity, to the extent of $300,000 a year." The treasurer points out that it was not until the conference of the International Chamber of Commerce held in Brussels in June, 1925, where certain important work of the National Industrial Conference Board was presented to representatives of other nations, that it was realized that no other country in the world has a similar organization. At this conference there were representatives of about forty nations and discussion among them concerning the work of the Conference Board showed that they fully appreciated its importance to American industry. This feeling was so marked that many of those present expressed themselves as hoping that it might be possible for them to introduce something similar in their own countries. Even in Germany, where every one supposed that complete statistical information as to industry existed, the Dawes Committee found a woeful lack of authoritative data bearing upon German industrial organizations, relationships, production and distribution, costs and profits.

The field of the Board's labours includes every kind of productive activity that is not strictly mechanical. It supplies its supporters with trustworthy information as to industrial progress, the welfare of labour, insurance and distribution, as well as on subjects related indirectly to industry, such as taxation, international indebtedness, agricultural conditions, etc.

The National Industrial Conference Board was organized in May, 1916, for the purpose of bringing the important associations of industrial producers throughout the country into harmonious and effective relationship and co-operation on all matters of economic character and of timely, important concern to American industry. The governing body consists at present of ninety-eight members who are the designated representatives of affiliated organizations, members-at-large, and associate members. This composite membership, drawn from industry's major branches of industry and thus representative of American industry as a whole, gives the deliberations of the Board a practical character, based on wide knowledge and experience.

The officers and executive committee members elected by, and subject to the control of, the Conference Board constitute the directorate and determine broadly the policies and activities of the Board. At the monthly executive committee meetings, advice is sought also from other Board members especially invited because of their interest in the subjects under discussion. The foreword of each report, accordingly, states that, "The publications of the Board thus finally represent the results of scientific investigation and broad business experience, and the conclusions expressed therein are those of the Conference Board as a body."

The Council meets weekly with the president to plan and consider the progress of the various research studies, and those in direct charge of investigations participate when their work is under discussion.

Since its organization, the National Industrial Conference Board has been accumulating a vast store of useful and practical information in the broad field of industrial economics and statistics. During the last few years, the Board's staff has been devoting intense study to the accumulation of date on those subjects that are generally embraced in the term "Industrial Relations." It has collected and collated a large amount of important information on such topics as Industrial Pensions, Group Insurance, Bonus Payments, Profit Sharing, Employee Stock Ownership, Seasonal Employment, Training Methods, Works Councils, Systems of Wage Payment, and similar by-product developments of industrial operation, and many interesting special reports and monographs have been published or are in process of completion. The Board also issues monthly authoritative information on Wages, Hours of Work and Employment in Industry, and on Cost of Living for Wage Earners' Families.

Construction of Canadian highways

The Commissioner of Highways (Canada) recently published a report for the year 1925-26, showing the progress made under the Canada Highways Act of 1919 towards the establishment of a Dominion wide system of main trunk highways connecting up all important centres in the various provinces and serving the great bulk of local as well as through and outside traffic. Under the act each province adopts a connected system of main or trunk highways upon which the federal appropriation is to be applied. Each province endeavours, as far as possible, to design that system so as to reach the industrial centres, to pass through important agricultural communities, and form a connected system within each province, uniting at provincial and international boundaries, thus making a through system of continuous roads.

The total mileage under agreement for federal aid at the close of the fiscal year was 8,524.40, the estimated cost of construction being $48,326,714, of which the aid estimated to come from the Dominion will amount to 40 per cent. During the past year, it is stated, very little change was made in the rates paid for labour and materials. Much of the work was performed by residents of the locality, many of whom, with their teams, have been on the work for four or five years, and their training and experience resulted in better work at lower cost than would have been possible otherwise.

Mr. James Dickson has been appointed to the position of chief inspector of mines for British Columbia, in succession to Mr. George Wilkinson, who died last August. Mr. James Strang, manager of the Extension Mine, Canadian Collieries (Dunsmuir) Limited, has taken the position of inspector of mines, vacated by Mr. Dickson, and Mr. James W. Jemson has been made acting inspector of mines for Nanaimo district.

The city council of Moose Jaw, Saskatchewan has passed a by-law requiring hair dressers who do not occupy regular establishments in the city to pay a license fee of $20 a year before they can follow their trade from house to house. This by-law was the result of a communication received by council from established barbers and hairdressers who objected to the itinerant barbers working in the city.

The Ontario Safety League recently announced the results of a drawing contest for the pupils of all schools in the province, on accidents and fires, and their prevention. The contestants were divided into two classes: Class "A" children of 12 years and under, and Class "B", children 13 to 16 years inclusive. The winners of the first places in each class were: Class "A", Earl Fortney, of Hamilton, ($20); Class "B", George Bounsall, Riverdale, Toronto ($20).

First aid schools are now being resumed at the coal mines in Nova Scotia, having been closed for about two years owing to distributed conditions. The British Empire Steel Corporation is said to be much interested in these schools, and aims at having a school at every colliery, as part of the present efforts for the reduction of industrial accidents.

The Minister of Agriculture (England and Wales) answering a question in the British House of Commons recently, stated that the government had considered the report of the Inter-Departmental Committee on Agricultural Unemployment Insurance, and that they did not see their way to adopt the recommendations of the majority report of the Committee, which were for the application of a special scheme of unemployment insurance to agriculture (LABOUR GAZETTE, November, 1926, page 1047).

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation as reported by the local superintendents of the Employment Service of Canada at the end of December was as follows:—

Although the weather in Nova Scotia had interfered to some extent with fishing, good catches were reported. A partial discontinuance of operations in logging had been caused by the holiday season, but at the end of the month the men were starting back to the bush and activity was fair. Building construction in Halifax was fairly active, but elsewhere throughout the Province this industry was quiet. Some work on a hydro dam at Sheet Harbour was being carried on. Apart from some decreases in activity in the cases of certain firms who had been busy on Christmas stocks, the manufacturing industry was about normal. In the coal mining industry the holidays had interfered to some extent with production, but rather full time with a continuing heavy production was reported. Transportation was fair, while trade for the holiday season was reported to have been good.

As in Nova Scotia the fishing industry in New Brunswick reported good catches. In the latter province activity in the logging industry was brisk, with frequent orders for men being listed at the employment offices. Manufacturing seemed to be experiencing average activity. Apart from the City of St. John, where there was quite a bit of activity in the building and construction group on the finishing of buildings started earlier in the year, this industry seemed to be rather dormant. Transportation showed increased activity throughout the province, with the winter port business of St. John being heavier than during the previous year. Trade was in a very good state.

From the Province of Quebec superintendents reported that farming was seasonally quiet. In the Sherbrooke zone the mines were quiet. Manufacturing in practically all branches throughout the province was shown to be quite active. While demands for workers for the construction industry were few, the volume of work being carried on was rather heavy for this season. Transportation was active. As usual in the City of Montreal domestic workers still fell short in numbers of the demands for their services. With good prospects for the balance of the winter and with fewer unemployed than a year ago, conditions in the Province of Quebec seemed favourable.

Farm orders listed at the employment offices in Ontario were not very numerous. Local shortages of workers for the logging industry were reported by some of the employment offices and others showed heavy demands with sufficient applicants available. While showing no diminution in activity, the metal mining industry did not report any demands for workers. No new construction jobs of major proportions seemed to be developing; yet, the finishing up at several points of jobs undertaken earlier in the year caused activity in this industry to be not unfavourable for the winter season. Apart from temporary shutdowns of factories for inventory purposes, manufacturing showed no slackening of effort; in fact some centres reported increases in staff, with the iron trades in a particularly favourable condition. A spirit of optimism with regard to the manufacturing outlook seemed general. Taken as a whole conditions in Ontario seemed favourable for the season, with less unemployment than is customarily the case at this time of year and with rather bright prospects for the immediate future.

Though the employment offices were not making many farm placements in Manitoba, there was a slight increase in their number. There was an increased demand for logging workers both for wood cutting in Manitoba and for general bush work in North Western Ontario. Construction work, except in Winnipeg, was practically closed down for the winter season. In that city the 1926 figure for building permits issued exceeded that of any year in several preceding years. Very few calls for general labour were reported, but unemployment seemed less severe than for some years past.

While there was not an unusually large number of vacancies for farm workers in Saskatchewan, applicants for this work did not seem to exceed the demands for their services. Very little construction work was being carried on throughout this province. There was practically no demand for bush workers. In spite of the fact that the general conditions seemed to be rather quiet, there did not appear to be any more unemployed than usual for the season.

Farm demands registered with the Alberta employment offices were fair. A satisfactory number of logging placements were being made. The building and construction industry was quiet. With a nominal demand for workers, who are readily available, the coal mining

industry seemed fairly busy. Between the normal slackness of the winter and the interference of the holidays, conditions at the end of December throughout Alberta were rather dull, although, comparatively speaking, they might be regarded as satisfactory.

Partly due to the unfavourable weather, the logging industry in British Columbia was quiet. Coal mining seemed rather busy and metal mining remained normally active but was not employing any additional workers. With more than enough tradesmen in most lines available, the building and construction industry did not show much activity as far as the employment offices were concerned. Shipping, and in consequence longshore work, was fairly busy. Compared with other years at the same season, general conditions throughout the Coast Province might be stated as being rather favourable.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review* §For group figures see articles elsewhere in this issue. **Figures for four weeks ending January 1, 1927, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

EMPLOYERS' REPORTS

Employment as reported by employers showed a further seasonal decline at the beginning of December, when 14,435 persons were released from the staffs of the 5,895 firms making returns, who had 832,847 employees. These losses were smaller than those customarily reported on December 1, and the situation was better than on the same date or, in fact, than in any month of the last five years. The index number stood at 101.1, as compared with 102.8 at the beginning of November, and with 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1925, 1924, 1923, 1922 and 1921, respectively.

Curtailment was noted in all provinces, that in Quebec being most extensive. In the Maritime Provinces, employment showed a further decrease, chiefly in lumber mills and construction. Logging, mining, transportation and trade, however, reported a considerable improvement. In Quebec, the largest losses were in construction and transportation, but manufacturing, mining and services were also slacker. On the other hand, logging and trade registered gains. In Ontario, there were continued but less extensive contractions; construction reported the heaviest declines, but there were also important recessions in manufacturing, chiefly in lumber mills. Logging and trade, however, recorded marked expansion. In the Prairie Provinces, logging, coal mining and trade showed considerable increases, but larger declines took place in construction, and transportation also recorded less activity than in the preceding month. In British Columbia, manufacturing, particularly of food and lumber products, showed a seasonal falling off, as did construction. Transportation and mining were also slacker, while logging and trade shared in the upward movement generally indicated.

Firms in Montreal, Quebec, Ottawa, and Hamilton reduced their staffs, while in Toronto, Windsor, Winnipeg and Vancouver improvement was noted. In Montreal, there were pronounced seasonal declines in shipping and stevedoring. Construction was also slacker and there was a decrease in textiles, but iron and steel and trade recorded pronounced gains. In Quebec, transportation and construction reported reductions in personnel, while manufacturing was rather busier. In Toronto, manufacturing as a whole gained, and substantial increases were indicated in trade. Construction, however, registered a seasonal contraction. In Ottawa, there was a considerable falling off in employment in sawmills and construction, but trade showed a decidedly upward movement. In Hamilton, the greatest recessions were in construction, although manufacturing as a whole was also dull. In Windsor and the Other Border Cities, automobile factories recorded some recovery, while only small changes were shown in other industries. In Winnipeg, trade was decidedly more active, but construction and manufacturing released help. In Vancouver, very little general change was noted, manufacturing showing curtailment while trade reported marked improvement.

The seasonal reductions in employment in manufacturing were less extensive than is usual on December 1 and the situation continued to be better than in the same month of any other year since 1920. Lumber mills reported pronounced seasonal curtailment and there was also a falling off in building material and electric current plants. Boot and shoe, pulp and paper, rubber, tobacco and iron and steel factories, however, recorded heightened activity. There were important additions to staffs in logging, coal mining, and trade. On the other hand, transportation, services and construction released workers, the losses in the last named being particularly heavy; nevertheless, employment in construction continued to be much more active than on the corresponding date of any other year of the record, which was begun in 1920.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of December, 1926.

TRADE UNION REPORTS

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The situation among local trade unions at the end of November, as indicated by reports tabulated from 1,501 labour organizations with 149,627 members, was somewhat less favourable than in October, 4.7 per cent of the members being idle at the end of November as compared with an unemployment percentage of 2.6 in the previous month. The level of employment was, however, higher than in November, 1925, when 5.7 per

cent of the members were reported out of work. Saskatchewan unions were the only ones to register improvement in conditions over the previous month and this was slight. The most substantial percentage reductions occurred among unions in Alberta and British Columbia, practically all of which was due to slackness existing in the coal mining areas of the two provinces. The decline in activity in Ontario was caused by a somewhat adverse situation in the building trades, supplemented by contractions in various trades of the manufacturing industries, and in Quebec almost wholly to idleness among railway carmen. Bricklayers, masons and plasterers and maintenance of way employees in Manitoba were less active than in October, and accounted for the increased percentage of unemployment in that province while in Nova Scotia and New Brunswick the declines were slight. In comparison with the returns for November last year less employment was afforded British Columbia, Alberta and Manitoba unions, but in Quebec the improvement was substantial and in the remaining provinces there were minor gains. Reports which were tabulated from 405 unions of manufacturing workers, with an aggregate membership of 41,357 persons, showed an unemployment percentage of 6.3 as against 3.7 per cent in October and 9.2 per cent in November last year. The greater part of the unemployment as compared with October was due to slackness among railway carmen, especially in the province of Quebec, although there were also contributing reductions among leather and wood workers, paper makers, printing tradesmen and cigar and tobacco workers. Among bakers and confectioners, textile and garment workers, hat and cap makers, metal polishers and glass workers on the other hand, a greater volume of employment was afforded. In comparison with November, 1925, garment and textile trades improved considerably, and moderate declines were registered among cigar makers, wood and glass workers, metal polishers and printing tradesmen. Unemployment in the coal mines of Alberta and British Columbia increased considerably during November as compared with the preceding month, but in the Nova Scotia coal mines there was scarcely any change. Quarry workers in Nova Scotia were again fully employed. In the building and construction trades, seasonal curtailment in operations caused the percentage of unemployment to rise considerably in comparison with October, 12.7 per cent of the members being idle at the close of November as compared with an unemployment percentage of 7.8 on October 31.

All tradesmen in the group, with the exception of bridge and structural iron workers and electrical workers were slacker than in October. In comparison with November last year, when 12.4 per cent of the members were idle, bridge and structural iron workers showed considerable slackness, followed by smaller reductions among carpenters and joiners, electrical workers and granite and stonecutters, while all other tradesmen in the group registered heightened activity. Returns tabulated from 621 unions of transportation workers, with a combined membership of 55,722 persons, indicated an unemployment percentage of 1.5 as compared with 1.6 per cent in October. The situation among navigation workers was much better than in October, but this improvement was almost offset by a slightly adverse situation in the steam railway division, the membership of which constitutes almost 81 per cent of the entire group membership reporting. Conditions were better during November in the transportation group than in the same month last year when 3.1 per cent of the members were idle, navigation, steam and street and electric railway employees and teamsters and chauffeurs all contributing their quota of gain. Retail shop clerks continued to report all members at work. Hotel and restaurant employees were slightly slacker than in October as were also theatre and stage employees, barbers and stationary engineers and firemen. Fishermen registered more unemployment than in October, but among lumber workers there was no idleness.

EMPLOYMENT OFFICE REPORTS.

During the month of November, 1926, the reference to employment made by the offices of the Employment Service of Canada numbered 29,843, while the placements effected totalled 28,338. Of the latter the placements in regular employment were 16,167 of men and 3,380 of women, a total of 19,547 and the placements in casual work were 8,791. Applications for work reported at the offices numbered 42,917, of which 32,310 were of men and 10,607 of women workers. Employers notified the Service during the month of 21,456 vacancies for men and 8,095 for women, a total of 29,551. It will be seen that a decline is recorded in the transactions when the above figures are compared with those of the preceding month, while an increase is shown when a comparison is made with the records of November, 1925, the reports for October, 1926, showing 44,120 vacancies offered, 50,838 applications made and 40,453 placements effected, while in November, 1925, there were recorded 27,211 vacancies,

40,668 applications for work and 25,796 placements in regular and casual employment. A report in detail of the work of the offices for the month of November, 1926, will be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES.

Some figures indicating the recent movements of trade and industry are given in the table on page 12. The Dominion Bureau of Statistics, Canada, reported that production of pig iron in Canada during November totalled 52,345 long tons, a decline of 25 per cent from the 70,124 tons reported for the previous month. In November, 1925, production was reported at 68,535 tons, a drop of 7 per cent from the output in October, 1925.

In the month under review, the output included 24,427 tons of basic iron as against 46,119 tons in October; 686 tons of malleable iron as compared with 954 tons; and 27,232 tons of foundry iron as against 23,051 tons in the previous month.

For the eleven months ending November, the cumulative production of pig iron was 683,532 tons, an increase of 33 per cent over the 515,508 tons produced in the corresponding period of 1925. For the eleven months of 1926, the output included 442,349 tons of basic iron, 199,535 tons of foundry iron and 41,648 tons of malleable iron.

Furnace charges during November included 93,659 long tons of imported iron ore, 58,627 short tons of coke and 28,554 short tons of limestone. For the year to date, furnace charges totalled 1,216,016 long tons of imported iron ore, 762,362 short tons of coke and 369,660 short tons of limestone.

During the month 1 furnace was blown out at Sault Ste. Marie leaving only 5 furnaces in blast on November 30. The active furnaces had a daily capacity of 1,825 long tons or 36 per cent of total capacity of all blast furnaces in Canada and were located as follows: 1 at Sault Ste. Marie, Ont., 2 at Hamilton, Ont., and 2 at Sydney, N.S.

Production of ferro-alloys in November fell off slightly to 3,308 tons from 3,559 tons in the previous month; most of the output was ferromanganese but there was also a small production of ferro-silicon.

Production of steel ingots and direct steel castings in Canada during November at 54,311 long tons marked a drop of 15 per cent below the 63,542 tons reported for October. Decreased production was due entirely to the lessened output of steel ingots which stood at 52,116 tons as compared with 61,415 tons in October; the tonnage of direct steel castings rose slightly to 2,195 tons from 2,127 tons in the previous month.

For the first eleven months of the year the cumulative production totalled 718,395 tons, an increase of 4 per cent over the 690,342 tons reported for the corresponding period of 1925. The output of 1926 included 687,240 tons of ingots and 31,155 tons of direct castings.

Pig iron prices again moved to higher levels during November, No. 1 foundry at Toronto, being quoted at $25.80 as compared with $25.30 in October, and No. 2 foundry $25.30 as compared with $24.80. At Montreal No. 1 foundry was $28.20 and No. 2 foundry, $27.70 in November as compared with $27.70 and $27.20 respectively in October. Basic pig iron at mill advanced from $21 to $22. The Bureau's index number for iron and its products (1913=100) rose from 145.1 in October to 145.7 in November.

Coal Production.—Full statistics of coal production during November are not yet available. The output of coal from Canadian mines during October was 28 per cent more than the production for the preceding month, and 9 per cent greater than the average for October in the past five years. The figures were 1,699,594 tons in October as against 1,406,879 tons in September, and an average of 1,556,968 tons during the five preceding years. All coal-producing provinces except New Brunswick showed a gain in production over the preceding month, and the outputs of Nova Scotia, and British Columbia were greater than the averages for the month in the five preceding years.

Men employed in the coal mines of Canada during October numbered 28,838, of whom 22,389 worked underground and 6,449 on surface, as compared with a total of 27,131 in September of whom 20,954 worked underground and 6,177 on surface. Production per man was 58.8 tons in October as against 51.8 tons per man in September. During October the production per man-day was 2.5 tons as compared with 2.4 in September. The tonnage lost (Table No. 4) was largely due to "lack of orders."

EXTERNAL TRADE.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in November, 1926, the merchandise entered for consumption amounted to $87,656,757, as compared with $75,285,662 in November, 1925. The domestic merchandise exported, amounted to $152,355,795 in November, 1926, as compared with $130,279,870 in October, 1926, and $140,279,235 in November, 1925.

The chief imports in November, 1926, were: Iron and its products, $15,531,548; Fibres, textiles and textile products, $15,009,759; non-metallic minerals and products, $14,345,892, and agricultural and vegetable products, mainly foods, $13,178,349.

The chief exports in the same month were in the group of agricultural and vegetable products mainly foods, $81,027,179, and wood, wood products and paper, $25,353,130.

In the eight months ending November, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $346,643,126; wood, wood products and paper at $194,816,717, and animals and animal products at $114,969,965.

BUILDING PERMITS

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada during the month of November, 1926, amounted to $9,968,937, as compared with $14,614,543 in October, and $7,988,765 in November, 1925. The decrease in the first comparison was $4,645,606 or 31.8 per cent, while the increase in the latter comparison totalled $1,980,162 or 24.8 per cent.

The *MacLean Building Review* estimates the total value of the contracts awarded in Canada in December, 1926, at $13,725,000 as compared with $34,972,800 in November, and with $12,675,000 in December, 1925. During 1926, the value of construction contracts awarded amounted to $372,947,900, or $74,974,900 more than in 1925, being an increase of 25 per cent. Quebec with $151,934,000 had the highest total of all the provinces for the second year in succession, the totals for the other provinces being, $141,929,000 in Ontario; $27,176,000 in British Columbia; $19,186,000 in Manitoba; $14,251,000 in Saskatchewan; $10,058,000 in Alberta; and $8,412,000 in the Maritime Provinces. The value of the construction contracts for the various classes of building in 1926, were as follows:—residential, $109,562,000; business building, $112,409,000; industrial building, $79,690,000; engineering work, $71,288,000.

Strikes and Lockouts

The time loss due to industrial disputes in December was less than during November, 1926, and also less than during December, 1925. There were in existence during the month 8 disputes, involving 167 employees, and resulting in a time loss of 3,778 working days, as compared with 8 disputes in November, involving 902 workpeople, and resulting in a time loss of 8,320 working days. In December, 1925, there were recorded 9 strikes, involving 1,532 workpeople and resulting in a time loss of 20,903 working days. Two of the strikes and lockouts commencing prior to December, 1926, terminated during the month, and the one strike recorded as commencing during December also terminated during the month. At the end of the month, therefore, there were on record five strikes and lockouts affecting 142 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called of.

Prices

Retail food prices were again somewhat higher due mainly to seasonal increases. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities was $11.18 at the beginning of December, as compared with $11.01 for November; $11.56 for December, 1925; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. Eggs again showed a substantial advance, while less important advances occurred in the prices of milk, butter, potatoes, rolled oats and sugar. Slight declines occurred in the prices of beef, mutton, fresh and salt pork, bacon, lard and cheese. Including the cost of fuel and rent with that of foods the total budget averaged $21.41 at the beginning of December, as compared with $21.24 for November; $21.87 for December, 1925; $20.90 for December, 1924; $21.21 for December, 1923; $20.97 for December, 1922; $21.49 for December, 1921; $25.67 for December, 1920; $26.92 for July, 1920 (the peak); $21.64 for December, 1918; and $14.26 for December, 1914. Fuel was slightly higher due to increases in the prices of anthracite and bituminous coal in some localities. Rent was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 150.5 for December, as compared with 151.5 for November; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); 223.4 for December, 1919; and 205.6 for December, 1918. In the grouping according to chief component materials three of the eight main groups advanced, three declined and two were unchanged. The Vegetables and

their Products group declined substantially, due mainly to lower prices for grains, flour and other milled products, and potatoes. The Non-Ferrous Metals and their Products group declined, because of lower prices for copper, lead, silver, tin and spelter. The Fibres, Textiles and Textile Products group was also slightly lower. The groups which advanced were: Animals and their Products, due mainly to higher prices for live stock, butter and eggs; Iron and its Products, mainly because of an advance in the price of steel billets; and the Wood and Wood Products group. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF DECEMBER, 1926

DURING the month of December the Department received two reports from Boards of Conciliation and Investigation established to deal with disputes between (1) the Canadian National Railways and certain of its employees in parlour and dining car service (on former Grand Trunk lines), members of the Canadian Brotherhood of Railroad Employees; and (2) the Canadian National Railways and certain of its employees on the Montreal Wharf, being checkers, coopers and porters, members of the Brotherhod of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The text of each of these reports is given below.

Application Received

During December a Board of Conciliation and Investigation was established by the Minister of Labour on the joint application of the Corporation of the City of New Westminster and certain of its employees in the Municipal Fire Department, members of the City Fire Fighters Union, to deal with a dispute regarding wages and working conditions and concessions similar to those enjoyed by other Fire Departments in the Province of British Columbia and especially by the adjoining Fire Departments of the Municipalities of Point Grey and South Vancouver and the City of Vancouver and the City of Victoria. The Board was constituted as follows: Rev. Dr. Albert M. Sanford, Principal of Columbian College, New Westminster, B.C., chairman, appointed on the joint recommendation of the other two members; Mr. William James Whiteside, of New Westminster, B.C., and Mr. R. P. Pettipiece, of Vancouver, B.C., nominees of the city and employees respectively.

Report of Board in Dispute Between the Canadian National Railways and Its Employees in Parlour and Dining Car Service

The Minister of Labour received on December 23 the report of the Board of Conciliation and Investigation to which had been referred for adjustment a dispute between the Canadian National Railways and certain of its employees in parlour and dining car service (on former Grand Trunk Lines), members of the Canadian Brotherhood of Railroad Employees. The Board was constituted as follows: Mr. E. McG. Quirk, Montreal, chairman, appointed on the joint recommendation of the other two members of the Board, Messrs. Guy Tombs and H. S. Ross, both of Montreal, nominees of employer and employees respectively. As a result of the Board's efforts an agreement between the parties to the dispute was consummated and its terms incorporated in the report of the Board.

Report of Board

MONTREAL, December 22, 1926.

Hon. PETER HEENAN, M.P.,
Minister of Labour,
Ottawa, Ont.

Re Industrial Disputes Investigation Act, 1907, and re differences between the Canadian National Railways and certain of its employees in parlour and dining car service (on former Grand Trunk lines), members of the Canadian Brotherhood of Railroad Employees.

SIR,—The Board of Conciliation established by you on October 21, 1926, composed of Mr. E. McG. Quirk, Chairman, Mr. Howard S. Ross, K.C., and Mr. Guy Tombs, has the honour to submit its report:—

Board hearings and sessions were held in Toronto and Montreal, where a number of witnesses from both sides were heard. Mr. A. R. Mosher, President, and Mr. J. E. McGuire, General Chairman of the Canadian Brotherhood of Railroad Employees, appeared on behalf of the employees. Mr. E. W. Smith, General Superintendent, Dining and Parlour Car Service, with Mr. J. M. Grieve, Superintendent at Toronto, appeared on behalf of the railway company.

The dispute arose out of the removal by the railway company of a number of coloured employees engaged on the dining car service, on former Grand Trunk lines, and the replacing of these employes by white help. The representatives of the employees contended that the removal of these coloured employees from the company's dining car service was contrary to agreement, affecting their status and seniority rights; creating also in the minds of other coloured employees engaged in similar service an uneasiness as to security of position—an uneasiness which might, in the minds of these employees, be attributed to colour prejudice.

The railway contended that the removal of these coloured employees and replacing them by white help was due to no other reason than that of the difficulty it experienced in securing competent coloured help. It strongly resented any allusion as to it being prejudiced towards its employees on account of colour. The Board here unhesitatingly assures the employees that, in its opinion, such prejudice does not exist. It was evident to the Board that a number of these coloured employees have been already placed by the company on other runs, while a few are being carried on payrolls pending assignment to runs or positions. In a measure this was satisfactory. It did not, however, settle or dispose of the matter of seniority rights, or the uncertainty of positions presently held by coloured employees.

Having listened to the respective presentations and arguments, the Board reached the view and expressed the opinion that there exists a common ground whereon the parties —having proper regard for justice and equity —could satifactorily reach a settlement of their differences. The Board suggested further conference which was agreed to by the parties.

The Board was pleased to receive a communication enclosing an agreement signed by representatives of the company and that of the employees, and which is attached. The text of the agreement is written into this report as follows:—

MONTREAL, December 16, 1926.

MEMORANDUM OF AGREEMENT

It is agreed that the dining cars on trains 7 and 8 (Chicago and Port Huron), shall be manned by coloured crews as at present. Should the railway, at some future date, deem it necessary to replace such coloured crews with white help, the committee representing the employees affected will be called into conference with officers of the department and an amicable arrangement made to take care of the employees displaced. It is also agreed that coloured kitchen help will be continued on trains where coloured help is at present employed in kitchens, and in the event of any change the employees' committee will be called into conference and amicable arrangements made in the same manner as herein provided for crews on trains 7 and 8.

Coloured employees who have been removed from positions on dining cars but who have been continued in the service of the company in other positions, or who have been continued on the payrolls of the company without having been assigned positions, or who have been granted leave of absence for sickness or otherwise, will retain and continue to accumulate seniority for the purpose of filling vacancies or new positions on dining cars operated with coloured crews.

Coloured dining car employees who are assigned duties as buffet or parlor car porters will exercise their seniority in retaining or bidding in such positions and will also retain and accumulate seniority to secure and retain positions on dining cars operated with coloured crews.

All employees referred to in this memorandum of agreement who have been, or may be, displaced as a result of the change from coloured to white waiters and have no regularly assigned runs, will be continued on the payrolls of the company at a rate not less than ninety ($90) dollars per month, until such time as they are placed on regularly assigned runs.

FOR THE COMPANY
(Sgd.) W. PRATT,

FOR THE EMPLOYEES
(Sgd.) J. E. MCGUIRE,

The Board is glad to adopt this agreement as its recommendation.

Respectfully submitted,

(Signed) E. McG. QUIRK,
Chairman.

(Signed) HOWARD S. ROSS,
Member.

(Signed) GUY TOMBS,
Member.

Report of Board in Dispute Between the Canadian National Railways and Its Checkers, Coopers and Porters on the Montreal Wharf.

A report was received on December 24 from the Board established to deal with a dispute between the Canadian National Railways and certain of its employees on the Montreal Wharf, being checkers, coopers and porters, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed as follows: Mr. Henry Holgate, Montreal, chairman, appointed by the Minister in the absence of a joint recommendation from the other members of the Board, Messrs. U. E. Gillen, Toronto, and J. T. Foster, Montreal, nominated by the employer and employees respectively. Two hundred employees were stated to be directly affected by the dispute, which related to a demand by the employees for increased wages and changed working conditions. The Board was successful in effecting an agreement between the disputing parties and the terms of the agreement were embodied in the Board's report.

Report of Board

Hon. PETER HEENAN,
Minister of Labour,
Ottawa.

SIR,—

In the matter of the Industrial Disputes Investigation Act, 1907, and of a dispute between the Canadian National Railways, the employer, and certain of its employees on the Montreal Wharf, being checkers, coopers and porters, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

The Board of Conciliation and Investigation, to which the above dispute was referred under the provisions of the Act, was duly constituted and the members duly sworn.

The Board met Monday, 29th November, December 1, 2, 3, 4, 10, 11 and 21. At all of these meetings but two representatives of the employees, officials of the C.N.R., and Mr. F. H. Hall, Grand Vice-President of the Brotherhood of Railway and Steamship Clerks, Freight Handlers and Station Employees, were present. Mr. J. E. McGuire, general chairman of the Canadian Brotherhood of Railway Employees, was present at the meetings attended by Mr. Hall, except December 2. The officials of the company and their employees concerned met by themselves at the suggestion of the Board December 8 and 9.

It was stated at the opening of the inquiry that the dispute was very largely one of jurisdiction between two labour organizations, Mr. McGuire claiming the right to represent the men on account of his organization having been instrumental in making an agreement between the men and the company in 1923. It was however clearly shown that, whereas the men concerned may have at the time of making the agreement been members of Mr. McGuire's organization, they had transferred their membership to that of Mr. Hall's organization. However, the Board took the position that the dispute was one between the employees and the employer, irrespective of any labour organization. It was clearly shown that Mr. Hall's organization had a majority of the men concerned. Mr. McGuire declined to submit any statement concerning his membership, and while not admitting Mr. Hall's statement to be entirely accurate, he did not dispute the general accuracy of the statement.

The employees concerned in this matter, during the season of navigation, work on the Montreal Wharf. When navigation closes, many of these men are transferred to Point St. Charles, doing similar work, and this has been the company's regular practice for many years and prior to the existence of any agreement. Mr. McGuire said that should any arrangement be made through any other organization than his, these men would not be permitted to work in Point St. Charles, because the majority of the men employed in similar work elsewhere on C.N.R. were members of his organization. The Board strongly recommends a continuation of the practice in vogue for many years, of using the men on the wharf or at Point St. Charles as work and circumstances justify—without prejudice to their seniority and pension rights. It was repeatedly stated by officers of the company and employees concerned that it was in the interest of the men and the company that the arrangement continue.

After a full discussion before the Board and after several conferences between the railway officials and the employees concerned, an accord was reached, and it was embodied in a recommendation from the Board quoted below and accepted by both parties to the dispute:—

The Board recommends the acceptance of the following by the employees and employer as satisfactorily disposing of all matters in dispute.

Effective December 15, 1926, the following amendments to the present schedule of rules dated August 2, 1923, will be applied.

HOURS OF SERVICE

The hours of service shall start between seven o'clock a.m. and one o'clock p.m. for men ordered out for day work. Men ordered out to work at night will be ordered for seven o'clock p.m.

The length of meal period shall be as mutually arranged locally between the company representatives and representatives of employees, but in the absence of any agreement to the contrary, the meal period shall not be less than thirty minutes or more than one hour.

If the employees are not relieved for midday and midnight meals beginning between the fifth and sixth hour after commencing work, they shall be allowed time and one-half thereafter until relieved.

Employees ordered to work between seven o'clock a.m. and one o'clock p.m. shall receive a minimum of three hours at the prevailing rate. Employees notified, or called to work, before seven o'clock a.m. or on, or after, six o'clock p.m., or on Sundays or holidays specified in this article, shall be paid a minimum of two hours at the prevailing rate, for which two hours service may be required.

Employees required to work on Sundays or the holidays specified below, shall be paid at the rate of time and one-half, New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. When any of these holidays fall on Sunday, the day observed by the Federal Government shall be considered the holiday.

NEW RULE

Except in the case of heavy freight requiring application of the service of more than one gang, a checker shall not be required to handle more than a single gang.

Accepted on behalf of the employees,

(Signed) T. KENNEDY,
(Signed) F. ROBERT,
(Signed) W. LALONDE,
(Signed) E. SHEEHAN.

Accepted on behalf of the employer,

(Signed) C. F. NEEDHAM,
Asst. to General Manager.

In addition to the above, the officers of the company said in regard to the question of rates of pay: In the event of the Canadian Pacific Railway granting increases in rates to their wharf freight handling staff at Montreal in the near future, the Canadian National Railways will likewise grant similar increases and from the same effective date. The employees expressed themselves as being satisfied with this arrangement.

Mr. Hall and Mr. McGuire, for their respective organizations, and Mr. C. F. Needham, assistant to General Manager, C.N.R., submitted written statements to the Board concerning this dispute. These statements are quoted below and form a part of this report:

EXHIBIT 4

BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES

Submitted on behalf of checkers, porters, coopers, etc., employed on the Montreal wharf by the Canadian National Railways, in the matter of dispute to be brought before this Board of Investigation and Colonization.

Mr. Chairman and Gentlemen of the Board,—The application made by the employees herein represented, for a Board of Conciliation and Investigation, dated September 21, outlined two distinct phases of the existing dispute. Primarily, the matter before your Board is one of proposed changes of working conditions and rates of pay, and we trust that in due course we shall be given opportunity to put before you our contentions in respect to these questions. This statement is intended to deal solely with the secondary features of the dispute, a feature involved through the attitude of the Canadian National Railways in refusing to deal with this body of employees, and because of the representations of the Canadian Brotherhood of Railway Employees, made to the Department of Labour, and perhaps to the railways.

We call your attention, in the first place, to the communication dated October 29, 1926, addressed to Mr. Aristide Paquette, Secretary of the Local Lodge of the Organization to which the men parties to this dispute belong, by Mr. H. H. Ward, Deputy Minister of Labour and Registrar. In the second paragraph of this letter it is stated that the Minister in establishing the Board has taken into consideration statements we have made, to the effect that we were acting on behalf of a majority of the men concerned. We believe it to be a fact that prior to appointing the Board the Department of Labour was satisfied, as a result of investigations made, that the signatories to the application actually represented the majority we had claimed. We now state that we stand prepared to establish to the satisfaction of your Board our authority to proceed on behalf of the employees concerned, by any means you may consider desirable. It should be added that throughout the course of the proceedings with the railways we consistently put forward our preparedness to establish this point beyond all questions or doubt.

We believe this feature as to the authority given by the employees concerned to be of paramount importance. It has been made to appear that the question involved is whether the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, or the Canadian Brotherhood of Railway Employees, should have the agreement with the railways covering this body of employees. We submit that in this particular case, where the men are working under a purely local contract with the railways, the only question involved is as to the right of these men to seek revision of the terms of their own contract. This right was in the first place questioned by the railways. So that you may be fully informed as to the contentions we have put forward in this regard, and the attitude of the railways, we are quoting herewith certain of the correspondence which passed between the railways and representative employees, in the course of the endeavours of the latter to secure conferences with representatives of the railways. Following is a communication addressed

to the railways by a representative employee, at the time of submitting the proposals looking to changes in rates and rules.

100 ASH STREET,
MONTREAL, July 8, 1926.

F. L. C. BOND, Esq.,
General Superintendent,
Canadian National Railways,
Montreal, P.Q.

DEAR SIR,—I am submitting herewith proposed schedule dealing with rates of pay and working conditions to govern the employment of gang foremen, checkers, coopers, sealers and porters employed on the Montreal Wharf.

The proposals contained in the submission attached are to take the place of the contract now in effect which was entered into on August 2, 1923, having been signed by Mr. W. R. Davidson for the Canadian National Railways and by Mr. J. E. McGuire and Mr. A. E. Lawrence for the employees. The required thirty days notice of desire to revise the existing agreement is hereby given.

For your information I might state that the employees concerned are now affiliated with the above organization and the committee which represented them in the negotiation leading to the establishing of the existing agreement has now no authority to act for them. Should it be necessary, I am prepared to furnish evidence of this by producing the authority I have been given to act for the men signed by almost one hundred per cent of their number.

Our Committee will be pleased to have you give consideration to the attached proposals and state a time when it will be convenient for you to meet us with a view of discussing our submission.

Will you please acknowledge receipt at your earliest convenience?

Yours truly,
(Sgd.) ROBERT JEHU,
General Chairman.

This letter was replied to by the railways as follows:—

MONTREAL, July 15, 1926.

Mr. ROBERT JEHU,
General Chairman,
Brotherhood of Railway and Steamship Clerks, 100 Ash Ave., Montreal, P.Q.

DEAR SIR,—This will acknowledge receipt of yours of the 8th instant, enclosing copy of proposed schedule dealing with rates paid and working conditions governing the employment of gang foremen, checkers, coopers, sealers and porters employed on Montreal Wharf.

The existing agreement covering working conditions and rates of pay for these employees is dated August 2, 1923, and was signed by Mr. J. E. McGuire, General Chairman, C.B. of R.E. This agreement of necessity remains in effect until notice of revision or termination is given in accordance with Article 8.

Before we can enter into any negotiations, I would request that you furnish me with satisfactory evidence that you represent the majority of the employees concerned.

Yours truly,
(Sgd.) F. L. C. BOND,
General Superintendent.

Before proceeding further we would state, in connection with the last paragraph of the above communication, that we did, subsequently, and under date of July 22, furnish Mr. Bond's office with a list of names of the men represented. It could be added that, since submitting the list referred to, several more of the men have joined our organization, making the staff in question almost 100 per cent members of the Brotherhood of Railway Clerks.

Pursuant to receipt of this list, Mr. Bond again wrote Mr. Jehu, acknowledging it, and stating that "the matter has been given further consideration, and we cannot do otherwise than abide by decision as given in the second paragraph of my letter as referred to above." This was his letter of July 15.

Before proceeding further, we wish to file with your Board a copy of that which Mr. Bond referred to as "the existing agreement", which was signed for the employees by Mr. J. E. McGuire, General Chairman of the C.B. of R.E. We will also file copies of the proposed revision which we submitted to the Canadian National Railways.

The railways, therefore, apparently took the stand that the existing agreement could only be amended or cancelled by giving notice as required in Article 8, which reads in part as follows,—"This agreement shall become effective June 1, 1923, and shall remain in effect until thirty (30) days after notice in writing is given by either party to the other, of their desire to revise or terminate."

This was considered quite proper by the employees, and it is the contention that this requirement had been complied with in the second paragraph of Mr. Jehu's letter to Mr. Bond of July 8, wherein the following occurs,—"The required thirty days notice of desire to revise the existing agreement is hereby given." However, in order to inform the railways more fully as to the situation, the employees addressed a communication to Mr. Bond, under date of August 17, this being signed by Mr. Paquette, Secretary, and attested by the Local Committee, all of whom are from the body of men concerned in the negotiations, reading as follows:—

With reference to your letter dated July 15, file 36923, addressed to Mr. Robert Jehu, General Chairman, in connection with proposed agreement covering checkers, coopers, porters, etc., on the Montreal Wharf.

Mr. Jehu acted with full authority from the employees concerned. However, in order to clarify the matter, we would explain that almost all the men whom it is proposed the schedule shall cover have now joined the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and Mr. McGuire and the Canadian Brotherhood of Railway Employees are without authority to act on our behalf. Should you desire the signatures of the employees, affirming this statement, we will be pleased to furnish them on request.

In view of the fact that the existing agreement, to which you refer, was signed by the General Chairman and not by any of our Local Committee, we were of the opinion that our present General Chairman's communication to you of the 8th ultimo was in order, and are still of that opinion. However, to avoid further controversy upon this point we herewith give the required thirty days' notice of our de-

sire to revise the existing agreement and request a conference with you at which the proposals submitted on our behalf by Mr. Jehu may be discussed. May we expect to hear from you within the next few days.

In reply the following was sent by Mr. Bond, dated August 20, and addressed to Mr. Paquette:—

I have your letter of August 17 and in reply would point out that we already have an agreement with the employees referred to, and, if it is their desire to give notice in accordance with the last paragraph of the existing agreement, it should be submitted through the medium of the parties thereto, as you will appreciate we cannot have two agreements for the same groups of men on the same territory.

It seemed apparent, from this letter, that Mr. Bond was taking the indefensible and astounding position that employees were not to be recognized as having any right to discuss matters pertaining to their rates of pay and working conditions with their employers, excepting through an outside agency. In brief, the attitude implied that the agreement was between Mr. McGuire and Mr. Davidson (the latter being the person signing for the Railways), rather than between the railways and certain of their employees. The views of the employees were fully set forth in a letter addressed to Mr. Bond, dated August 27, signed by Mr. Paquette and attested by the Local Committee, as follows:—

With reference to your letter dated August 20 in regard to the proposed revision of the Wharf Agreement.

The agreement to which you refer as now being in effect is not, we take it, one between the railways and Mr. McGuire or the Canadian Brotherhood of Railway Employees, but between the railways and certain of the employees working on the Montreal Wharf. Mr. McGuire no longer representing us, we have given the required notice both through our present General Chairman and our own local committee. This, we contend, is quite proper, and we cannot think you wish to imply that either Mr. McGuire or the Canadian Brotherhood of Railway Employees should take any action in connection with an agreement covering employes whom they no longer represent.

The agreement was signed for the railways by Mr. W. R. Davidson, who was at the time General Superintendent, and, if subsequently Mr. Davidson had left the service, the employees would not have insisted that any notice looking to a revision of the schedule should be submitted through him.

Will you please let us know at an early date whether you will meet our committee as we requested, so that we may be governed accordingly?"

From no impartial point of view can the position of the railways in this regard be considered logical or consistent. Railways often aver that meeting an organized body of employees does not necessarily imply recognition of the organization, and this has frequently been the attitude of the Canadian National Railways. Now there has been a refusal to meet employees, an attitude diametrically opposed to former policy. It is true that, while in agreements the name of the organization with which employees are affiliated does not appear in all cases, there is a tacit understanding the agreements are between employers and the organizations. This, however, can only be true in cases where the employees actually are members of the organization or organizations. This explains our use of the term "outside agency" as applicable to the C.B. of R.E., in this attempt to subvert trade union principles, and interfere without authority in relations between employer and employees. We submit, gentlemen, that in signing the agreement dated August 2nd, 1923, Mr. McGuire was acting as a servant of the men, as their agent if you will. They have dispensed with his services, by leaving the organization he represents, he therefore represents them no longer and they have notified their employer of this. It is the contention the railways should now recognize whoever may be designated by the employees as their representative or representatives. Who, other than the employees, should have the right to select their representatives? Are employers to be given the right or arrogate the right to say who shall represent their employees in such proceedings? Yet in this case the railways have said in effect that their employees can only take certain action looking to the securing of improvements in their working conditions through certain individuals or an organization with which they have no connection. We submit, gentlemen, that the attitude of the railways is without parallel, and the contentions made in an endeavour to justify this attitude, without merit. Supposing a corporation entered into a certain contract with another corporation, through the services of a certain firm of lawyers, subsequently desiring and seeking some change in the contract through another firm of lawyers. What justification could be advanced for a refusal of the second corporation to recognize this latter firm as the representatives of the other party to the contract? You will agree with us, there would be none, provided there had been proper and adequate notice from the corporation as to the transfer of their legal business. We believe the position of the railways in this matter to be untenable.

We respectfully submit, gentlemen, that there is no question before you as to which organization these men should be with. There is no question of jurisdiction before you. These questions are decided, and rightly so, by the men affected. If they withdraw from membership in the Brotherhood of Railway Clerks, the brotherhood will withdraw these representations on their behalf. It may be said, but not truthfully, that this brotherhood has been unethical in admitting to membership employees covered by contract signed by officers of another organization. It is true, and significant, that the men came to the Brotherhood of Railway Clerks unsolicited. Later on, we will put before you further details as to why they did this.

What of the stand taken by the Canadian Brotherhood of Railway Employees before the Department of Labour. By establishing this Board, the Minister has recognized that there is a dispute between us and the Canadian National Railways. The Minister points out that representatives of the Canadian Brotherhood of Railway Employees have taken the position that the agreement now in existence is part of a general or system agreement, and they quote article 6 of the agreement to substantiate their claims. However, the Minister establishes

the Board, regardless of these contentions, but, of course, says that opportunity will be given to representatives of the C. B. of R. E. to lay their views before the Board.

We believe it can be shown that the argument put forward by that organization to the Minister is an absurd pretence. What is this Article 6 of which they speak? This article is composed of three paragraphs, and no doubt they have reference to the last paragraph which we will quote:

> Employees holding seniority under schedule for Clerks and Other Classes of Employees, shall, at the close of the season of navigation, be assigned to the positions to which they are entitled under that schedule, according to seniority, merit and ability.

There are perhaps fifteen men out of the two hundred who are interested in the foregoing clause, and the Canadian Brotherhood of Railway Employees argues that, because of these fifteen men and the existence of the clause, the other one hundred and eighty-five men have no right to seek improvements in their conditions through representatives they select. But what of the fifteen? They have been told that, unless they belong to the Canadian Brotherhood of Railway Employees, they will not be permitted to assume their winter positions to which the clause refers and, regardless of this coercion, some of them have joined the organization to which the majority belong. What right or privilege does the clause actually confer? None whatever, because it can be shown that these men were filling the winter positions in question ten years before the clause existed, or before the C.B. of R.E. had an agreement for the men. The C. B. of R. E. has said that the clause confers the right of this winter work, but it can be shown that the men were performing the winter work when they were previously working under a summer agreement between the Brotherhood of Railway Clerks and the railways. The fact of the matter is that the men have established seniority rights to this work, and it cannot be taken from them. If the men were in these positions during former years, when they were members of the Brotherhood of Railway Clerks, and it can be shown they were, are they now to be deprived of the work because they are again members of this brotherhood? We do not think the railways would be party to any such course, but the C. B. of R. E. has intimated that organization would seek to prevent the men asserting their seniority rights unless they were members of the C. B. of R. E. We will here file with your Board a copy of a letter addressed to the employees by representatives of the C. B. of R. E. An original is on our files and at your disposal. It is signed by Mr. Joe Wall, General Organizer of the C. B. of R. E. We will first read this letter so you may grasp its peculiar significance in one or two essential respects.

We will pass over the many inaccuracies of this letter (we are referring to those of statement and not of diction) with the remark that they are very misleading, and, in fact, untrue insofar as there is reference to the Brotherhood of Railway Clerks. While we do not consider it to have anything to do with this case, we stand prepared to prove this. What is significant about the latter is that it admits, in the first place the men are not members of the C. B. of R. E., because it solicits their membership, and secondly, it implies there will be interference with their right to the winter work if they do not join the C. B. of R. E., or if they dare to affiliate with the Brotherhood of Railway Clerks. If this is not coercion, then we do not know the meaning of the word.

Just a word as to what constitutes this winter work. It is our understanding that it is really wharf freight diverted to Point St. Charles during winter months, these men are required to handle. The C.P.R. also diverts some freight from the wharf to Place Viger Sheds during the winter months, and it is there handled by wharf men without question being raised by the regular employees at Place Viger.

We have already put before you our opinions as to the rights of the men to discuss with the management the proposed revision of their own contract. Perhaps a word of explanation as to why the revision is being sought will be of value. It should be first mentioned that the men were formerly members of this brotherhood, the Brotherhood of Railway Clerks, and had a joint lodge with employees of the Canadian Pacific Railway who also work on the wharf. At that time there was a joint contract in effect, between all of these men and the Canadian Pacific and Canadian National Railways. As evidence of this we are filing with your Board a copy of a contract which became effective May 1, 1920. Subsequently the C.N. employees left this organization, and some of them joined the Canadian Brotherhood of Railway Employees. We maintained a contract with the Canadian Pacific, and we are filing with you a copy of that now existing. A comparison of this and the agreement in effect on the wharf for the C.N. employees has convinced the latter that they are not enjoying some things established under the C.P. contract, and in order to standardize their conditions with those of the C.P.R. employees, and in order to solidify their ranks on the wharf, they again joined the Brotherhood of Railway Clerks and sought the revision. As we previously stated, this action of theirs was unsolicited on the part of the Brotherhood of Railway Clerks.

We are filing with you also a copy of the proposals we submitted to the Canadian National Railways. It might be explained that we submitted proposals to the C.P.R. also, having as the object the re-establishing of a higher rate than local freight shed rates, this being a condition which existed prior to the time these men of the C.N.R. joined the C.B. of R.E.

In regard to the claims of the C.B. of R.E., we are sure you will appreciate the essential difference in the question before you, where we have shown we represent the entire staff working under a separate agreement, and any question that might arise or has developed elsewhere, where employees covered by a general agreement have dissociated themselves from the main body and sought a separate contract. In such a case as the latter it would admittedly be difficult to adjudge of the rights of a minority as opposed to the priority rights of a majority. Here is no such question. In this case a body of men, working under a local agreement, are seeking through representatives of their choice to revise the terms of the agreement. Who shall deny this right? For the C.B. of R.E. to do so is a usurpation and for the railways to do so is an unprecedented arbitrariness.

If in this submission we have failed to enlighten you upon any relevant feature, we solicit your inquiries. Knowing as we do that a full investigation can only serve to illu-

strate the fairness and tenability of the position we are taking, we invite any measure of inquiry, and offer our co-operation.

Respectfully submitted,

(Sgd.) F. H. HALL,
Vice Grand President.

EXHIBIT 9

MONTREAL, December 3, 1926.

The Board of Conciliation and Investigation.

Re alleged dispute between the Canadian National Railways and certain of its employees, who are employed as freight handlers on Montreal Wharf during the season of navigation.

GENTLEMEN,—We are glad of the opportunity you have afforded us to reply to the statements made by the representatives of the Brotherhood of Railway and Steamship Clerks, etc., before your Board, and in replying we are confining it solely to a statement of fact and in as brief a form as it is possible, under the circumstances, to do.

We must first deal with the existing agreement covering the positions held by the men in question:

1. The freight handling staff employed by the Canadian National Railways on Montreal Wharf became members of this organization in the early part of 1923. They were organized into a properly constituted division of the Canadian Brotherhood of Railroad Employees and elected from their number a set of officers of their own choice.

2. The officers elected by the said employees approached our General Committee and requested that committee to submit to the railway a proposed schedule of working conditions and rates of pay for their respective positions. Notice of the employees' desire to improve their working conditions and rates of pay was given to the railway on May 15, 1923, and negotiations were entered into at a subsequent date.

3. Throughout the negotiations a committee of the men who were working on Montreal Wharf were present and, before any rule or rate of pay was agreed to, their consent was obtained. During the said negotiations, it was made abundantly clear to the said committee that, in order for certain of the staff to continue to enjoy the privilege of transferring to the Bonded Shed at Point St. Charles at the close of navigation, it would be necessary to link up the Wharf Agreement with the General Schedule covering the same classes of employees all over the system. To this condition they readily agreed and on that understanding the said agreement was consummated with the railway.

4. The agreement embracing the freight handlers' positions on Montreal Wharf was signed at Montreal on August 2, 1923, by Mr. W. R. Davidson, General Superintendent, who was duly appointed by the management of the railway to negotiate the said agreement, and by Messrs. J. E. McGuire and A. E. Lawrence, General Chairman and General Secretary of the General Committee, Canadian Brotherhood of Railroad Employees, representing these classes of employees all over the system.

5. Article 6 of the said agreement gave certain of the employees the privilege of transferring to the Bonded Shed at Point St. Charles after the close of navigation. The employees who were given this privilege of transfer constituted the permanent staff on the wharf and the remainder of the staff has been and is only considered as a floating or temporary staff. A large number of the men forming the floating or temporary staff on the wharf leave the service when navigation closes in the fall, seek employment elsewhere and never return.

It is therefore obvious that we would not give persons employed for a temporary period on the wharf seniority rights elsewhere, and, in view of that fact, the seniority of these wharf men, if they held any, was confined exclusively to the positions on the wharf as long as they existed.

6. The rates of pay provided for these employees in the 1923 agreement were the same as the rates of pay enjoyed by similar classes of employees all over the system at that time. Prior to the said agreement being negotiated, they were receiving on the average about five (5c.) cents per hour less than other employees doing similar work on the remainder of the system.

7. There is practically no difference between the conditions and rates of pay enjoyed by the Canadian National Wharf employees, and conditions enjoyed by similar classes employed by the Canadian Pacific Railway on Montreal Wharf.

I consider it a duty to fully inform the Board with respect to the application of our General Schedule and its relation to the Wharf Agreement, so that you will be in a better position to judge the merits, if any, of the statements and contentions of the applicants.

1. I am filing with the Board copies of our present agreements covering freight handling staffs all over the Canadian National System. I would refer you to Article No. 1, Rule (b) of the said General Schedule, wherein you will note the meaning of the word "employee" as applied under that agreement. By carefully examining the General Schedule and the Wharf Agreement, you will see that unless the two agreements were linked together, that the permanent staff on the wharf would have no right whatever to work at the Bonded Shed at Point St. Charles in the winter months.

I would also refer you to Article 3, Rule (b), of the General Schedule, which reads in part as follows:—

> Employees accepting permanent positions covered by other wage agreements will be dropped from the seniority lists.

We desire to emphasize here that any employee covered by our General Schedule who takes a permanent position covered by another Agreement immediately forfeits his seniority under our General Schedule, and should he again obtain work under our General Schedule, he would start as a new man insofar as seniority is concerned. Therefore, it will be readily seen that Mr. Hall is not competent to interpret the provisions of any of the agreements we hold with the Canadian National Railways.

2. Again it will be readily seen that, unless the two agreements were linked together, the permanent staff on the wharf who transfer to

the Bonded Shed at the close of navigation in the Fall of each year would immediately forfeit any seniority rights they may hold at the Bonded Shed when they go back to the wharf again in the Spring, because of the fact that the work on the wharf lasts for approximately eight (8) months each year.

It is not now, nor has it ever been, the desire of this organization to deprive any employee of any rights he has established, but agreements once made must be respected at all times and under all circumstances. When the Brotherhood of Railway and Steamship Clerks, etc., started to organize the meployees on the wharf this year, we considered it our duty to warn the members of the permanent staff with respect to their employment during the winter months, should the subsidiary agreement covering the wharf employees be terminated. This is what prompted Mr. Wall to write his letter of September 1st, 1924.

The letter dated September 1st, 1926, signed by Mr. Joe Wall, General Organizer of the Canadian Brotherhood of Railroad Employees, addressed to checkers and freight handlers on Montreal Wharf, ironically referred to in Mr. Hall's brief, served two purposes, namely: first, to warn the members of the permanent staff of the impending danger, and secondly, to suggest to the said employees that the Canadian Brotherhood of Railroad Employees was the logical and proper form of organization they should be members of. There is absolutely nothing wrong with Mr. Wall's letter and no fair minded person can take any exception to it.

We take no exception to criticism of our organization, its methods, its officers, its propaganda in the interests of the workers, nor its policy, as a matter of fact we invite it, so long as the criticisms are of a constructive character, but I think that you will agree that an organization with the honourable record of the Canadian Brotherhood of Railroad Employees cannot allow nor afford to permit a foreign controlled body to carry on a campaign of destructive criticism, which is unfair and unwarranted, against the wishes of the Canadian workers. It is, therefore, quite apparent that Mr. Hall does not know the meaning of the word "coercion" as used in his brief respecting the letter of Mr. Wall, and, regardless of anything contained in Mr. Hall's brief, I must again state that the statements contained in Mr. Wall's letter are correct in every detail, and this is substantiated by Mr. C. F. Needham's written statement which he read to your Board on Wednesday last.

The Canadian Brotherhood of Railroad Employees holds agreements with the Canadian National Railways, embracing employees in practically all of its departments. We have through eighteen (18) years of schedule negotiations established our right to represent the classes covered by those agreements, and before that right was established we were obliged to demonstrate to the railways and the Department of Labour (Canada) that we at least represented the majority of the employees of those classes on the entire system. We do not intend, therefore, to relinquish our right to represent those classes on the entire system, because Mr. Hall and his associates succeed in organizing a few men on Montreal Wharf.

I might point out to the Board that it is impracticable and very undesirable to have two organizations endeavouring to represent the same classes of employees in the same territory. Such a condition of affairs leads to endless trouble. When we say so, we are speaking from experience, and this statement is again substantiated by Mr. Needham's declaration of Wednesday last.

Your decision in this case is of paramount importance to the Canadian Brotherhood of Railroad Employees. Our reasons for appearing before your Board are for the express purpose of fully informing you of our position on the matter and at the same time conveying to you the facts of the case as we know them, so that your decision, when made, will be based on the facts of the case and with no other consideration. We must state in closing that your decision will have far-reaching effects on the organization of the Canadian Railway workers, and we ask that you consider and render your decision on the jurisdictional feature of the case before proceeding further.

Respectfully submitted,

(Signed) J. E. McGUIRE,
System Chairman,
Canadian Brotherhood of Railroad Employees.

EXHIBIT 11

BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES

Submitted on behalf of checkers, porters, coopers, etc., employed on the Montreal Wharf by the Canadian National Railways, in the matter of the dispute to be brought before this Board of Conciliation and Investigation.

MR. CHAIRMAN AND GENTLEMEN OF THE BOARD,—With all brevity, consistent with the necessity of laying before your Board our further contentions in the matter before you, arising from the various statements contained in the submission addressed to you under date of December 3 signed by Mr. McGuire of the Canadian Brotherhood of Railway Employees, we put before you the following, being based upon an analysis of that submission.

With regard to the paragraph headed No. 1, we have nothing to say other than to comment that the action of the employees as therein indicated was subsequently reversed when they left the C.B. of R.E. and joined the Brotherhood of Railway Clerks.

The paragraph under the heading of No. 2 cannot be as lightly passed, containing as it does an admission that the Committee of the C.B. of R.E. were requested by these employees to make representations to the railway having as an object the securing of "a proposed scedule of working conditions and rates of pay for their respective positions." It will be noted that the employees did not ask to have their rates of pay and working conditions provided in the General Agreement, notwithstanding the fact that a general agreement was then in effect. There is, therefore, the tacit admission that what was being sought and what was subsequently entered into was a local agreement. As has been devloped in the course of these proceedings, the employees here represented have always worked under local agreements when there have been agreements in effect. The third paragraph of the submission made by Mr. McGuire contains nothing upon which we need comment, other than the reference to the question of the privilege of transferring to the bonded sheds at Point St. Charles,

which is also referred to in paragraph five and with which we will shortly deal.

Paragraph four merely states something which we already know, namely, that the agreement was signed by representatives of the railway and representatives of the employees. It has not been denied that Mr. McGuire had at that time authority to proceed on behalf of this body of men, but we have contended and maintain the tenability of our contention that Mr. McGuire at the time was acting as a servant of the men which he now no longer is. We have given full expression to our views in this regard in our original brief to which we invite your further consideration. If at that time Mr. McGuire was recognized by the railway as representing these men, the railways must have been cognizant of the fact that the men had vested him with this authority, and it seems strange, now that this authority has been withdrawn, that the railways should deny the men the same right of representation now, i.e. the right to designate their own representatives.

Article five of Mr. McGuire's submission is very important, destroying as it does the very basis of the pretentions he has put forward. It states in the first sentence that Article 6 of the local agreement, dated August 2, 1923, gave certain of the employees the privilege of transferring to the bonded shed at Point St. Charles after the close of navigation. If this article did confer that privilege, by what right had the men during many previous years filled these winter positions? That right, gentlemen, was, and is, and must remain, one conferred by their many years of service with the railways, a seniority right if you will. The next sentence in this article of Mr. McGuire's statement is not in accord with the facts. It has been sought therein to make it appear that the employees who had the privilege of transfer constituted the permanent staff on the wharf and that the remainder of the staff has been and is considered floating or temporary. Among the committee of employees appearing before you to-day, are some who have worked on the Montreal Wharf for the Canadian National Railways for the past six or eight consecutive years; others among those we here represent have been similiarly employed over a greater number of years. Can this service be termed floating or temporary? None of the men referred to work at Point St. Charles during winter months must be regarded as permanent employees of the railways. Like Mr. McGuire, we do not think that the question as to the standing of what might be properly determined to be temporary staff, should interfere with this question before the Board as result of action taken by the permanent employees. We trust, however, that representatives of the railways here will take occasion to correct any inference conveyed by the last sentence of Article five of Mr. McGuire's submission, that Mr. McGuire's organization and not the railways or the men's years or service confers seniority rights.

Both Articles six and seven of the submission we pass with the remark that we have filed with your Board copies of our agreement with the Canadian Pacific Railway on the wharf, and we invite your own comparison of them. The employees evidently have not been satisfied as to the comparison or they would not be here before you to-day. The continuing remarks of Mr. McGuire's submission constitute an attempt to draw a "red herring" across the path of this inquiry by frequent references to a general agreement with which we are not concerned. If the relation of the General Agreement to the question before you has any status, we merely ask that it be pointed out to the Board wherein in the General Agreement is there any reference to the wharf conditions. It is the local agreement, Gentlemen, and the revision thereof with which we are concerned and which was dealt with in our application for the Board of Conciliation. Some of the contentions in the submission appear to be without point, or, if they have a point, it is so obscure as to need some elucidation. We do, however, question the statement, and in all consistency, in view of the fact that the men went to Point St. Charles years before the 1923 agreement was entered into, that unless this invisible linking of the two agreements is maintained the men will lose seniority standing.

In our previous submission we referred to a letter addressed to the employees by a representative of the C.B. of R.E., not because it has anything to do with the essentials of the dispute, but to indicate that the Canadian Brotherhood of Railway Employees was seeking to arrogate the conferring of seniority rights. We have said that, while this is not a relevant feature, we stand prepared to prove the lack of truth in the statements made in that letter with reference to the Brotherhood of Railway Clerks.

Just a word, Gentlemen, in connection with the use of the term "foreign-controlled body" and the expression "against the wishes of the Canadian Workers." We do not expect your Board will be influenced by any such extraneous references or considerations. The membership of the Brotherhood of Railway Clerks in this country is not foreign controlled; we have in fact full autonomy in our internal structure and relations with the railways. Our status with our organization is that of Canada to the Mother Country, a help and not a hindrance. Speaking of the wishes of Canadian workers, all of those before you to-day, are, we believe, good Canadians, and it is for the consideration of their wishes that your Board was constituted.

Regardless of Mr. McGuire's opinions as to the impracticability and undesirability of having two organizations endeavouring to represent the same classes of employees, we submit, gentlemen, that it is the employees and not Mr. McGuire or ourselves who should determine the organization they shall employ. Your Board could not, and would not want to if it could, tell these men to reaffiliate with the Canadian Brotherhood of Railway Employees. Yet, in effect, if you destroy their right to a local agreement, a right they have had and exercised for years, you destroy the effectiveness of the exercise of their right to select their own organization and representatives.

We have suggested, Gentlemen, that the question of the revision of this local agreement should be left with this body of employees and their employers. Any other course is an abrogation of their rights, enjoyed, as we have said, for many years, and enjoyed in common with the freight handlers doing similar work on the wharf employed by the Canadian Pacific Railway, and with the steamship checkers, the longshoremen and the ship liners whose terms of employment have always been the subject of local agreement when agreements have existed.

Respectfully submitted,

(Sgd.) F. H. HALL.

EXHIBIT 12

COMPANY'S BRIEF IN CONNECTION WITH APPLICATION FOR BOARD OF CONCILIATION AND INVESTIGATION BY EMPLOYEES ON MONTREAL WHARF, MEMBERS OF THE INTERNATIONAL BROTHERHOOD OF RAILWAY AND STEAMSHIP CLERKS, FREIGHT HANDLERS, EXPRESS AND STATION EMPLOYEES.

For the information of the Board we would like to submit a resume of the schedule developments in connection with the freight handlers—Montreal Wharf.

Prior to 1919 there was no schedule in effect.

In March, 1919, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station employees submitted a schedule of rates of pay, rules and working conditions covering this class of work in the Port of Montreal. No agreement was reached, but the case was finally submitted to the Canadian Railway Board of Adjustment No. 1 jointly by the employees, the Canadian National Railways, the Grand Trunk Railway, the Canadian Pacific Railway and the Dominion Transport Company. The Board issued their decision in case No. 30 of May 8, 1919, and this decision was put into effect.

In June, 1920, the International Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees applied for a Board of Conciliation and Investigation for employees of the C.N.R., G.T.R. and C.P.R. Direct negotiations were resumed and the Board cancelled. The Board was re-established in September, 1920, and induced the parties to negotiate further and an agreement was reached on October, 15, 1920, signed by representatives of employees (no organization mentioned) and both C.P.R. and C.N.R. (covering ex-G.T.R. and C.N.R.).

On May 14, 1921, certain groups of employees covered by the joint C.P.R. and C.N.R. schedule went on strike and the agreement was consequently considered at an end.

On October 8, 1921, a Board of Conciliation was applied for by the Canadian Brotherhood of Railroad Employees. Application was declined on account of the lateness of the season.

In 1922 no schedule was in effect on C.N.R. or C.P.R.

In 1923 schedule was negotiated with the C.N.R. employees through their General Chairman, Mr. J. E. McGuire, of the C.B. and R.E., and the C.P.R. negotiated with their employees through General Chairman Mr. F. H. Hall, of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

In 1924 the 1923 schedule was continued in effect on the C.N.R., and the C.P.R. negotiated a new schedule in August, 1924.

In 1925 the schedule of 1923 was continued in effect on the C.N.R., and on the C.P.R. their 1924 schedule was continued in effect.

In 1926 the schedule of 1923 was continued in effect on the C.N.R., and on the C.P.R. their 1924 schedule was continued in effect. We understand the C.P.R. employees gave thirty days' notice of cancellation of agreement in July, 1926, and that negotiations are now in progress, but that up to the present time there has been no revision in rates and evidently this matter is being held in abeyance pending the decision of the Board of Conciliation which has been established to deal with the general schedule covering these classes of employees on the C.P.R.

The employees in question, as already stated, are covered by schedule agreement which took effect June 1, 1923, and which was negotiated with the committee representing the employees of which Mr. J. E. McGuire was General Chairman, he also being the General Chairman of the committee which represents these classes of employees generally on Canadian National Railways.

Under date of July 8, 1926, a letter was received from Mr. Robert Jehu, over the title of General Chairman, on letterhead of the B. of R. & S.S. Clerks, serving notice of cancellation of existing agreement covering the wharf employees and enclosing copy of a proposed schedule.

Letters were exchanged, the last letter being addressed to General Superintendent Mr. F. L. C. Bond, under date of September 10, 1926, the letter being signed by Mr. A. Paquette as Secretary, and committee consisting of T. Robert, N. Lalonde and B. Sheehan. It is stated in the application before the board that no reply was received from Mr. Bond to this letter. Mr. Bond, on two occasions previous to the receipt of this letter from Mr. Paquette, wrote to him, the last communication, dated September 7, setting forth the company's position and stating that the company did not wish to become involved in any jurisdictional dispute and suggested that in the first instance this feature should be concluded through or with the parties who negotiated the present agreement.

Since the suggestion of Mr. Bond was apparently not being acted upon, he, on receipt of the letter dated September 10, wrote General Chairman Mr. McGuire on September 13 in respect to the matter. Reply was not received from Mr. McGuire until September 21, on which date notice was also received from the B. of R. & S.S. Clerks that a Board of Conciliation had been applied for and under these circumstances it was considered a reply to Mr. Paquette's letter of September 10 was not necessary.

Had the Board not been applied for, the communication of September 10 would have been answered, and if a further conference was desired by the employees concerned this would have been granted by the General Superintendent; as a matter of fact the Company's officers are generally willing to meet the employees to discuss matters affecting them, without regard to their affiliation with any labour organization, and are willing to do so in this case for the purpose of discussing the questions involved and outlining the company's position.

General Chairman Mr. J. E. McGuire, who signed the agreement at present in effect, has protested against any interference with the agreement, contending that he is still the accredited General Chairman of these classes of employees generally on Canadian National Railways, and the railway has no reason to believe this is not correct. However, if the remarks of Mr. Hall are correct to the effect that he expects that at some time in the no distant fuure he will be in a position to satisfy the management of the Canadian National Railways that his committee should be considered as the accredited representatives of these classes of employees generally on the Canadian National Railways, we might offer the suggestion that this jurisdictional dispute in respect to the wharf staff be held in abeyance until that time, when the matter would probably automatically take care of itself.

The present case is to our minds quite clearly a jurisdictional dispute between two labour organizations.

In the briefs which are before the Board, the question has been raised as to whether the existing schedule agreement covering the employees on Montreal Wharf is between the employees and the company, or between the General Chairman and the officer who signed the agreement on behalf of the company. The company holds that this agreement is one between their employees and themselves.

In so far as the company is concerned, the two essential points are:

(1) That a separate agreement be in effect covering these employees, and

(2) That wharf employees be protected in their seniority and working privileges in connection with service at Pt. St. Charles during the winter season.

In respect to the first point. It is generally recognized that owing to the peculiar conditions of the wharf work, separate wage agreements are necessary, and in the case of the Montreal Wharf, the Canadian National freight handlers are working side by side with the Canadian Pacific Railway freight handlers and to ensure harmony, the working conditions and rates of pay should be approximately the same.

In regard to the second point. The seniority and working privileges which the wharf employees enjoy in connection with freight handling staff at Point St. Charles furthers the welfare of the employees in providing more continuous employment for the older employees. This provision is absolutely necessary from the Company's standpoint in order to retain and have available, when required, experienced and qualified men to direct the wharf work. The wharf employees have for many years enjoyed these seniority and working privileges amongst the freight handlers at Point St. Charles.

It will, however, be admitted by all concerned that seniority matters have in recent years been followed up much closer than in the past, and this no doubt was the reason why it was considered advisable to confirm this seniority and working privileges in the schedule effective June 1, 1923, as provided by Rule 6 thereof. The probability is that it would be difficult, if not impossible, to make a mutual agreement at this time covering such an agreement were it necessary to negotiate a wharf agreement with a committee not affiliated with the committee which negotiated the general agreement.

Naturally the company prefers similar classes of employees on the general territory to be represented by the same General Chairman and committee, as this simplifies the handling of matters and prevents grievances.

It might be mentioned that the wharf work is of a seasonal nature, and that the season for this year is about ended. The work necessitates the employment of considerable floating help. In this connection we submit statement showing the labour turnover, that is, the percentage of full time worked from April 26 to September 29; during this period there appeared on the payrolls a total of 335 men, of these men ninety-four worked less that 10 per cent of the full number of days and one hundred and sixty-four worked less than 50 per cent of the full days; we also submit statement which indicates that there are very few of these men with long service; out of the total of 222 men appearing on this statement, it will be observed that there are 99 with service of two years or less, and only 37 with service of ten years or over.

(Sgd.) C. F. NEEDHAM,
Assistant to General Manager.

All of which is respectfully submitted.

(Sgd.) HENRY HOLGATE,
Chairman.
(Sgd.) U. E. GILLEN,
(Sgd.) J. T. FOSTER.

MONTREAL, December 22, 1926.

SETTLEMENT OF DISPUTE INVOLVING TRAIN SERVICE ON RAILWAYS IN CANADA

THE report of a Board of Conciliation and Investigation established under the Industrial Disputes Investigation Act, 1907, to which was referred a dispute involving some 15,000 conductors, trainmen, brakemen, yardmen and switchmen employed on the principal railways in Canada owing to a proposal for an increase, was given in the LABOUR GAZETTE for November, p. 1058, with the minority report of the member appointed on the recommendation of the employees, and the December issue contained a statement that a settlement had been reached early in December, certain increases in wages being agreed to by the railways.

The board report recommended no changes, but the minority report recommended the restoration of the differentials in wages on railroads in Canada over those in the United States, the granting of an increase in wages of six per cent to equal that given in the United States in 1924, and the granting of any further increases which may be made in the United States in the dispute then before an arbitration board.

Early in 1926 the employees has been negotiating with the railway companies for increases in wages and similar negotiations had been carried on during 1923 and 1924 but had been broken off without any changes being made.

The changes in wages and working conditions on railways in the United States since 1917 were discussed to a considerable extent during the negotiations before the dispute in Canada was referred to the Board of Conciliation and Investigation, and also in the proceedings and in both the Board Report and the minority report.

The same classes of employees in the United States had also entered into negotiations with the railways there and some railways agreed

to increases of about five per cent for engine and train service employees, and the dispute with other railways was dealt with by the United States Railroad Labour Board, which granted similar increases in most cases so that the increases became general in 1924. Branches of United States railways in Canada gave these increases and branches of Canadian railways in the United States.

A dispute in regard to further increases for these employees was before the United States Railroad Labour Board when it ceased to exist in May, 1926, on the repeal of certain sections of the Transportation Act, 1920, and the enactment of the "Watson-Parker Railroad Disputes Act, 1926, and the dispute was dealt with under the new legislation. After the renewed negotiations had failed, the newly established Board of Mediation secured an agreement by the two parties to submit it to arbitration and when the Board in Canada reported in November the case in the United States was before the Board of Arbitration.

Early in 1918, there being a dispute between the railways in Canada and their employees as to increases in wages, chiefly on the ground of the steep increases in the cost of living since the middle of 1916, it was agreed to put in force the same increases as were made in the United States. The railroads in the United States had been taken over for operation by the government at the end of 1917, and following an inquiry by the Railroad Wage Commission, commonly called the Lane Commission after the Chairman, the Hon. Franklyn K. Lane, Secretary of the Interior, and formerly a member of the United States Interstate Commerce Commission, the Director General of Railroads, the Hon. W. A. McAdoo, Secretary of the Treasury, issued General Order No. 27, commonly known as the "McAdoo Award," giving increases in wages averaging about forty per cent and establishing the basic eight-hour day. In Canada an Order in Council approved the arrangement for similar increases in wages and improvements in working conditions in Canada and increases in freight rates and other railway charges were approved by the Board of Railway Commissioners to meet the increases in these and other costs. Similarly in the United States in 1920, following the return of the railways by the government to their owners, further increases were made by the United States Railroad Labour Board, averaging about twenty per cent, and the same increases were made in Canada and railway charges were again increased. (LABOUR GAZETTE, August, 1920, p. 1068). From July, 1920, until the middle of 1922 there was a steep decrease in prices and in the cost of living, a depression in industry and much unemployment in all trades during which railway traffic and revenues declined greatly. In the United States the railways applied for a reduction in wages and changes in working conditions and from July 1, 1921, wages were in turn reduced by a decision of the United States Railway Board, the reductions for the various classes being from five to eighteen per cent and averaging about twelve per cent. (LABOUR GAZETTE, July, 1921, p. 906).

This decrease was also effected in Canada, a Board of Concillation and Investigation under the Industrial Disputes Investigation Act, 1907, dealing with the dispute between the engine men, conductors, trainmen, etc., and the railways having recommended that the decreases be made (LABOUR GAZETTE, Nov. 1921; p. 1354). Reductions in freight rates and other railway charges were also effected. In 1922 further decreases in wages of about ten per cent were made for employees in shops, on maintenance of way and for the clerks, freight handlers, etc., but not for engine and train service men nor telegraphers. Maintenance of way employees secured slight increases toward the end of 1922 (LABOUR GAZETTE, April, 1923, p. 404). When negotiations for wage increases in 1923 and 1924 were entered into by engine and train service employees, industrial and traffic conditions were improving and the refusal of the railways to grant the five per cent increase given in the United States was on the ground that conditions in the two countries were no longer comparable. In 1926 when negotiations for increases in Canada were again initiated and in the United States for further increases, conditions had still more improved. It was pointed out in the report of the Board of Conciliation and Investigation that in the United States the cost of living in June, 1926, was three per cent higher than in July, 1921, while in Canada it was three per cent lower. It also mentioned that there were different provisions in the two countries for adjusting freight rates, etc. The minority report stated that before 1918 the employees on railways in Canada had wage rates higher than in the United States owing to the recognition of less favourable conditions due to a northern climate and that these differentials had been dropped in 1918 in accepting the principle of adopting wages and working conditions in Canada similar to those in the United States, and that the employees were entitled to the benefits of changes made in the United States.

Following the issue of the report of the Board the representatives of the two railway employees' organizations concerned, the Order

of Railway Conductors and the Brotherhood of Railroad Trainmen, met in conference at Montreal early in November and decided to have the members vote on whether the report of the Board should be accepted or whether a strike should be declared, the conference recommending against the acceptance of the award. On November 23 it was announced that, by a majority greatly exceeding the two-thirds required, the men had voted to strike unless a settlement satisfactory to their representatives was made. The latter conferred with officials of the railroads and, no settlement being reached, negotiations were terminated; and it was announced that a date had been set on which work would cease unless a settlement was arrived at. Later this date was rumoured to be December 10. The Honourable Mr. Heenan, Minister of Labour, as well as the Honourable Mr. Dunning, Minister of Railways and Canals, met the representatives of the disputing parties and urged the desirability of a settlement to prevent an interruption of the supply of food and fuel to the people. The Minister of Railways and Canals discussed the desirability of reconstituting the Board of Conciliation and Investigation or of appointing a Royal Commission.

The railway employees' representatives did not approve of this proposal, but at the Minister's instance offered to re-open negotiations with the railways. On November 30 the Presidents of the two railways met the officers of the unions for Canada. On December 2 it was announced that the Board of Arbitration in the United States appointed to decide a similar dispute between the conductors and trainmen and the railroads in the Eastern States had awarded an increase in wage rates of 7½ per cent, this being in addition to increases of 5 to 6 per cent given in 1924 which was not given on the two Canadian railways. On December 3 it was announced that an agreement had been reached between the Presidents of the two Canadian railways and the union representatives providing for increases of about 6 per cent, amounting to about half the decreases made in 1921, which were about 12 per cent.

The accompanying table shows the rates of wages provided for by the new agreements, effective from December 1, 1926, and corresponding rates in effect previously from the dates indicated, in Ontario and east, similar changes being made in western Canada.

RATES OF WAGES FOR CONDUCTORS, TRAINMEN AND YARDMEN, EASTERN LINES

	April 1, 1917	July 1, 1918	May 1, 1920	July 15, 1921	Dec. 1, 1926
Passenger Service—					
*Conductors, per mile....cents	3·16	3·35	4·67	4·27	4·47
per day....dollars	4 90	5 38	7 00	6 40	6 70
per month....dollars	147 00	161 50	210 00	192 00	201 00
*Brakemen, per mile....cents	1·89	2·23	3·33	2·93	3·13
per day....dollars	2 93	3 62	5 00	4 40	4 70
per month....dollars	88 00	108 57	150 00	132 00	141 00
*Baggagemen, per mile....cents	2·00	2·28	3·44	3·04	3·24
per day....dollars	3 10	3 87	5 16	4 56	4 86
per month....dollars	93 00	116 20	154 80	136 80	145 80
Through Freight Service—					
*Conductors, per mile....cents	4·00–4·18	4·82–5·04	6·44	5·80	6·16
Brakemen, per mile....cents	2·67–2·84½	3·72–3·97	5·12	4·48	4·84
Way Freight Service—					
*Conductors, per mile....cents	4·50–4·60	5·42–5·54	6·96	6·32	6·68
*Brakemen, per mile....cents	3·00–3·13	4·19–5·42	5·52	4·88	5·24
Yard Service—					
Foremen, per day....dollars	3 60–4 00	4 86–5 20	6 96	6 32	6 64
Helper, per day....dollars	3 30–3 70	4 60–4 94	6 48	5 84	6 16
Switch tenders, per day....dollars	....	....	5 04	4 40	4 72

*Conductors, brakemen and baggagemen, are paid by the mile, with a guarantee of certain minimum amounts per day and per month on the basis of 100 miles per day in freight service, and since 1920, 150 miles per day in passenger service.

STRIKES AND LOCKOUTS IN CANADA DURING DECEMBER, 1926

THE number of strikes and lockouts in existence during December was 8, the same number as in November. The time loss for the month was less than during December, 1925, being 3,778 working days as compared with 20,903 working days in the same month in 1925.

Date	Number of disputes	Number of employees involved	Time loss in working days
Dec. 1926.....	8	167	3,778
Nov. 1926.....	8	902	8,320
Dec. 1925.....	9	1,532	20,903

The Record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting more than one working day. Disputes of only one day's duration, or less, and disputes involving less than six employees, are not included in the published record unless at least ten days' time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 147 workpeople, were carried over from November, and one dispute commenced during December. One of the disputes recorded as being carried over from November, the strike of cap makers at Toronto commencing August 27, 1926, was not reported to the Department in time for insertion in any previous issue of the LABOUR GAZETTE. Two of the strikes commencing prior to December terminated during the month, and the strike which commenced in December also terminated. At the end of the month, therefore, there were on record five strikes and lockouts, as follows: Fur workers, Winnipeg, Man.; ladies' clothing workers, Toronto, Ont.; men's clothing workers, Montreal, P.Q.; men's clothing workers, Toronto, Ont.; and cap makers, Toronto, Ont.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to four such disputes, namely: moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, March 24, 1925; men's clothing workers, St. Hyacinthe, P.Q. (formerly of Montreal), March 19, 1926; and metal polishers at Sackville, N.B., March 15, 1921.

The strike which commenced during December was against decreased earnings at piece work. Of the three stirkes which terminated during the month two ended in favour of the employers and the result of one was indefinite.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

BOOT FACTORY EMPLOYEES, TORONTO, ONT.—This strike, which commenced January 13, 1926, against an alleged change in working conditions in violation of the agreement in force, was called off by the union on December 7, the employer agreeing to take back some of the strikers, and to employ the others whenever openings occurred. The dispute involved about sixty employees at the beginning. The employer replaced these within a short time and from time to time the majority of the strikers secured work with other employers.

FUR WORKERS, WINNIPEG, MAN.—This dispute, commencing in September, for recognition of the union, remained unterminated as one of the employers involved continued to refuse to recognize the union, 25 of the total number of employees involved, 134, being still out.

HAT AND CAP MAKERS, MONTREAL, P.Q.—This dispute which commenced on March 4, 1926, against an alleged violation of the agreement in force, the strikers being replaced, terminated on December 24, 1926, the last of the strikers having secured work elsewhere.

MEN'S CLOTHING WORKERS, MONTREAL, P.Q.—This dispute which commenced July 28, 1926, to secure union wages and working conditions in non-union shops, remained unterminated at the end of December, there being 40 strikers still involved although early in August the majority of the employers signed agreements with the union.

CAP MAKERS, TORONTO, ONT.—This dispute, being a strike for an agreement providing for the employment of union members only,

occurred on August 27, 1926, and was still unterminated at the end of December.

CORSET MAKERS, TORONTO, ONT.—This strike occurred on December 17 and while the information as to the number involved is indefinite, it has been reported that 20 employees stopped work as they were not able to make sufficient earnings at the piece rates in force. They also alleged that the machines provided were inferior to those formerly used, whereas the employer stated that the new machines were superior and would be found more efficient when the employees had become accustomed to them. At the end of the month it was reported that the establishment had been closed down, and the dispute was, therefore, regarded as terminated with an indefinite settlement.

STRIKES AND LOCKOUTS DURING DECEMBER, 1926

Industry, Occupation and Locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and Lockouts Commencing Prior to December, 1926.			
MANUFACTURING—			
Boots and shoes (other than rubber and felt):			
Boot factory employees, Toronto, Ont.	4	24	Commenced Jan. 13, 1926, against changes in working conditions alleged to be in violation of agreement. Terminated, Dec. 7, 1926.
Leather, fur and products:			
*Fur workers, Winnipeg, Man...	25	650	Commenced Sept. 25, 1926, for shorter hours and recognition of union. Unterminated.
Clothing (including knitted goods):			
Hat and cap makers, Montreal, P.Q.	1	24	Commenced Mar. 4, 1926, against violation of agreement. Terminated Dec. 24, 1926.
Cap makers, Toronto, Ont....	12	150	Commenced Aug. 27, 1926, for employment of union members only. Unterminated.
*Ladies' clothing workers, Toronto, Ont.	10	260	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing workers, Montreal, P.Q.	40	1,000	Commenced July 28, 1926, for union wages and working conditions in non-union shops. Unterminated.
Men's clothing workers, Toronto, Ont.	55	1,430	Commenced Sept. 25, 1926, for recognition of union Unterminated.
(b) Strikes and Lockouts Commencing During December, 1926.			
MANUFACTURING—			
Clothing (including knitted goods).			
Corset makers, Toronto, Ont..	20	240	Commenced Dec. 17, 1926, against decreased earnings at piece work. Terminated Dec. 31, 1926.

*Reports indicate that the strikers had been replaced, but there were still a number of employees out and on the strike or lockout benefit list of the union.

Industrial Employment in Japan

The Department of Labour has received an abstract of the annual statistical report of the Department of Commerce and Industry of Japan, containing the statistics of factories and companies in 1924. This is the first of a series of English editions of the reports published by the Japanese Department, which are designed to give foreign readers information on commerce and industry in Japan. The number of persons employed in the factories is given as 1,789,618 (859,783 male and 929,835 female). The preponderance of female labour is due largely to conditions in the textile group, in which 759,730 women are employed out of a total of 935,093 employees. The number of employees in the other main industrial groups in 1924 were as follows:—metal, 95,664; manufacture of machines, tools, implements, instruments, etc., 236,619; ceramic industry, 67,890; lumber industry, 50,196; printing and bookbinding, 47,960; foodstuff industry, 169,214, etc. In the mining industry there were 305,252 employees in 1924, of whom 251,069 were in coal mining and 42,361 in metal mining, in addition, 34,037 workers were employed in placer mining (principally gold). The number of fatalities in the mining industry in 1924 was 772 males and 131 females.

ANNUAL REPORT OF THE DEPARTMENT OF LABOUR OF CANADA

THE annual report of the Department of Labour of Canada for the fiscal year ended March 31, 1926, was issued during the current month. The principal activities of the Department are described under ten heads as follows:—1. Industrial Disputes Investigation Act; 2. Conciliation Work; 3. Fair Wages; 4. Statistics; 5. LABOUR GAZETTE; 6. Combines Investigation Act; 7. Employment Offices Co-ordination Act; 8. Technical Education Act; 9. Government Annuities Act; 10. International Labour Organization.

In addition to the activities under these heads, the report enumerates the following regular annual publications of the Department:—(1) Labour Organization in Canada, (2) Labour Legislation in Canada, and (3) Organization in Industry, Commerce and the Professions in Canada.

"Labour Organization in Canada" is a comprehensive guide to the labour union movement, setting forth the chief activities of organized labour in the Dominion, with complete statistics on the subject, together with information regarding the nature of the organizations with which the Canadian organized workers are identified; also containing a complete labour directory giving the names and addresses of the chief executive officers of all central labour organizations on the continent known to the Department, as well as a list of local branch unions existing in each locality in the Dominion. "Organization in Industry, Commerce and the Professions in Canada" contains full details of organizations other than labour unions. "Labour Legislation in Canada" is a series of publications containing the text of the various acts affecting labour that have been enacted by the Dominion Parliament and by the legislatures of the several provinces. The series started with the publication of a substantial volume "Labour Legislation in Canada as existing on December 31, 1920," published by the Department in 1921. Annual supplements have been issued since that date, each containing a cumulative index which provides a guide to all the labour legislation enacted in Canada up to the date of publication.

Industrial Disputes Investigation Act, 1907

The report contains an account of proceedings under this act during the nineteenth year of its operations, and states the present position of the act in view of its amendment in 1925 and the subsequent legislation in the several provinces. The text of the amending federal act was given in the LABOUR GAZETTE, June, 1925, page 557. The amendment limited the scope of the act to disputes which are not within the exclusive jurisdiction of the provinces, and provided also that disputes that are within provincial jurisdiction could be brought within the scope of the act by special provincial legislation. During the latter months of the fiscal year under review, the legislatures of five of the provinces, namely, British Columbia, Saskatchewan, Manitoba, New Brunswick and Nova Scotia, took advantage of this new provision of the Industrial Disputes Investigation Act and enacted enabling legislation by which the federal statute was made applicable to disputes of the classes named in the Dominion law, but otherwise within exclusive provincial jurisdiction. A bill to the same effect introduced in the legislature of the province of Ontario at its 1926 session was withdrawn on the second reading. The province of Alberta preferred to retain full authority with respect to the settlement of industrial disputes within its exclusive jurisdiction and on April 8, 1926, enacted a Labour Disputes Act, which resembles generally the federal statute. The provincial law relates, however, to all industries and omits any provision prohibiting strikes and lockouts pending the report of a board. No action was taken by the provinces of Quebec or Prince Edward Island with a view to meeting the position arising out of the Privy Council decision.

A review of proceedings under the Industrial Disputes Investigation Act from its inception on March 22, 1907, shows that during this period of nineteen years 642 applications were received for the establishment of Boards of Conciliation and Investigation, and 450 boards were constituted. In all but 37 of the disputes, the threatened strikes were averted or ended through the instrumentality of the Act.

Following the enactment of the 1925 amendment to the Industrial Disputes Investigation Act and prior to action being taken by the provinces looking to legislation investing authority in the federal law, a lull occurred in proceedings under the statute, four applications only having ben received during the fiscal year for the establishment of Boards of Conciliation and Investigation. In three of these cases the disputes were adjusted by mutual agreement whilst steps for the establishment of boards were pending; the fourth case involved a jurisdictional dispute between two unions and no board was established.

32771—3½

Conciliation Work

During the year the services of the Department of Labour were utilized in connection with the adjustment of a number of labour disputes. In connection with two of the four cases of disputes in which application had been made for the establishment of a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, it was not found necessary to proceed with the establishment of a board since the difficulties were adjusted through the assistance of a conciliator. In many of the disputes where a settlement was secured by conciliation and no strike took place, it was deemed desirable to give the matter as little publicity as possible. As a result the best work of the department achieved in this direction often becomes known only to the chief representatives of the disputants.

Fair Wages

The report gives an account of the Fair Wages policy of the government of Canada since the adoption of the resolution of the House of Commons in 1900, which provided that all government contracts and sub-contracts should contain conditions securing the payment of such wages as are generally accepted as current in the trade affected thereby, this policy being applicable further to all work aided by Dominion public funds. In 1903 additional force was given to the fair wages policy by the inclusion in the Railway Act of a section requiring the payment of current rates of wages to all workmen engaged in the construction of lines of railway towards which the Parliament of Canada votes financial aid. An Order in Council was adopted in 1907 requiring contractors to post fair wages schedules in a conspicuous place on any public works under construction and to keep a record of payments made to workmen in their employ, such records to be open for inspection by fair wages officers of the Government.

The fair wages policy was confirmed in 1922 by Order in Council, in order that the fair wages conditions inserted in departmental contracts should be made as nearly uniform in terms and administration as possible.

As a result of experience gained in the administration of the fair wages policy, as set forth in the Order in Council of 1922, certain amendments were made to the "A" conditions by Order in Council of April 3, 1924, on recommendation of the Minister of Labour, which, without altering the scope and intent of the policy, were intended to make its purpose clearer and more definite.

Fair wages officers have been included in the staff of the Department of Labour since the inception of the fair wages policy in 1900, their services being used in the preparation of fair wages schedules and in the adjustment of complaints and disputes arising from time to time as to the proper rates observable under the terms of Government contracts.

During the year 1925-26 the Department of Labour prepared fair wages conditions in connection with the execution of one hundred and twenty-seven contracts. These were divided among the different departments of the Government as follows: Marine and Fisheries, 3; Railways and Canals, 11; National Defence, 5; Indian Affairs, 4; and Public Works, 104.

Statistics

During the year statistics of strikes and lockouts, wages and hours of labour, prices and cost of living, employment and industrial accidents were collected and published regularly in the LABOUR GAZETTE, annual reviews also appearing soon after the close of the calendar year. In accordance with the "Statistics Act, 1918," and under arrangements with the Dominion Statistician, approved by Order in Council dated October 16, 1922, certain classes of these statistics are collected and published in co-operation with the Dominion Statistician, in close association with statistics of general social and economic conditions as organized in the Dominion Bureau of Statistics. The classification of industries and occupations drawn up in the bureau is followed in the compilation of the statistics of labour.

The departmental record of strikes and lockouts in Canada was begun on the establishment of the department toward the end of 1900 and particulars of industrial disputes have been given each month in the LABOUR GAZETTE; also as early in each year as possible a summary statement as to the previous calendar year is printed in the LABOUR GAZETTE with a statistical analysis. The figures are given for the calendar rather than the fiscal year, because in this form they become more easily comparable with statistics on the same subject gathered in other countries, which also as a rule use the calendar year.

The publication in the LABOUR GAZETTE each month of statistics of retail prices of staple foods, and of coal and wood and coal oil, and as to the rentals of six-roomed workingmen's houses in some sixty of the industrial centres of Canada, begun in 1910, was continued. Since 1921 the figures as to food prices have been secured through the Dominion Bureau of

Statistics from representative butchers and grocers in these centres, as well as through the resident correspondents of the LABOUR GAZETTE. The calculation of a weekly family budget of foods, fuel and rent, in order to show the changes in the costs of these items from month to month, was continued, supplemented by information as to the changes in the costs of clothing, boots, etc., secured half-yearly.

Statistics of wholesale prices compiled and published by the Dominion Bureau of Statistics in continuation of the figures published by the Labour Department from 1910 to 1924, have been included in summary form in the LABOUR GAZETTE each month. Index numbers of prices constructed by Professor H. Michell, by the Canadian Bank of Commerce, and by the United States Federal Reserve Board were given in summary form. The movement of prices, wholesale and retail, in other countries has been dealt with in brief notes in each issue of the LABOUR GAZETTE, and extensive tables of index numbers showing the movement in those countries for which figures were available have been given quarterly. A supplement to the LABOUR GAZETTE for January, 1926, contained a review of the prices movement in Canada and other countries during 1925, in addition to the summary tables, there being also included tables giving the figures by groups for the more important index numbers.

Statistics as to wages and hours of labour are secured to a considerable extent in connection with the work of the department on strikes and lockouts, industrial agreements, conciliation and mediation in industrial disputes, proceedings under the Industrial Disputes Investigation Act, 1907, fair wages schedules, and reports of changes in wages and hours. Reports are also secured each year from representative employers in the various industries and from labour organizations as to the rates of wages in effect.

The Department also prepares full statistics of fatal industrial accidents in Canada, which are published quarterly and annually in the LABOUR GAZETTE.

Labour Gazette

The LABOUR GAZETTE was published monthly in English and French during the fiscal year ending March 31, 1926, which was the twenty-fifth year of its existence, the average number distributed each month being 10,564 of the English, and 1,473 of the French editions.

Combines Investigation Act, 1923

Several investigations were carried on under this act during the fiscal year, some of them by the Registrar, and one by a commissioner appointed specially for the purpose. These proceedings have been outlined from time to time in the LABOUR GAZETTE. They included investigations into the marketing of fruit and vegetables in Western Canada, in connection with which a combine was found to exist; into an alleged combine in the distribution of fruits and vegetables produced in Ontario; and into an alleged combine of bread bakeries in Montreal, and into the methods of the Proprietary Article Trade Association.

Applications for investigations were received also during 1925-6 in connection with business in several other commodities, and in addition to the formal applications for investigations, many complaints were made to the registrar regarding so-called unfair practices alleged to be in restraint of trade. Many of the complaints arose from the changing methods of modern distribution, including the development of chain stores, co-operative buying agencies, department stores, mail order houses, etc., and the efforts of certain wholesalers and retailers to maintain the traditional channels of distribution. Frequent complaints were made with reference to the fixing and maintaining of resale prices on different commodities, and also as to the refusal of manufacturers and wholesale houses to supply goods to dealers whom they do not regard as *bona fide* wholesalers or retailers.

Employment Offices Co-ordination Act

The report contains the eighth annual report of the Employment Service Branch, being for the fiscal year ended March 31, 1926.

The primary function of the Employment Service Branch is administrative—that of administering the Employment Offices Co-ordination Act (8-9 George V, chapter 21). This Act empowers the Minister of Labour,—

(*a*) to aid and encourage the organization and co-ordination of employment offices and to promote uniformity of methods among them;

(*b*) to establish one or more clearing houses for the interchange of information between employment offices concerning the transfer of labour and other matters;

(*c*) to compile and distribute information received from employment offices, and from other sources, regarding prevailing conditions of employment.

The employment offices whose co-ordination and uniformity of methods are sought are the employment offices of the various provincial governments. The desired co-operation of the provinces, one with the other and all with the Department of Labour, is obtained by the device of federal subventions for

employment service work provided for in the Act. In view of the close co-ordination of effort which is attained, the employment offices of the several provinces and the federal clearing houses, though each unit retains its individual identity, are considered as a single organization known as the "Employment Service of Canada."

Incidental to the administration of the Act is the supplementary function recited in (*c*) above—that of collecting, compiling and publishing information which sheds light on the currently prevailing trend of the volume of employment. To fulfil this mission two classes of statistics are regularly prepared: (1) administrative statistics—those showing the volume of work performed by the offices of the Employment Service of Canada; and (2) trade union statistics—those compiled on the basis of monthly returns forwarded voluntarily by some 1,500 local trade unions, showing the percentages of their membership unemployed. These statistics are published monthly in the LABOUR GAZETTE.

The Employment Service Council of Canada, a body advisory to the Minister of Labour in respect of the administration of the Employment Offices' Co-ordination Act, held its seventh annual meeting at Ottawa during the fiscal year. The council, which is composed of representatives of the various parties to the agreements, as well as representatives of the railways, organized labour, and employers, dealt with employment matters of current interest and agreed upon recommendations concerning them for presentation to the minister.

Technical Education Act

By the Technical Education Act of 1919 the Dominion Government undertook to assist the provinces in promoting and developing technical or vocational education for industrial workers. Each province has its peculiar problems and has undertaken the work in its own way. There has been no national policy for vocational education nor has any attempt been made to impose a new organization or system of training on any province. The Technical Education Branch of the Department of Labour has recognized the right of each province to control education affairs and has confined its efforts to spreading information about vocational education, assisting local and provincial boards when requested, and confining federal grants to work which is designed to educate people for industrial life. Each province has manifested an earnest desire to carry out the intention of the Technical Education Act. Despite the differences in industrial development, density and origin of population, and educational policies, there has been an increasing tendency towards co-operative action on the part of the provinces. The efforts of the past seven years have been concentrated on expanding and improving school systems. Until recently, little has been done towards promoting training in industry and co-operative action between the schools and industrial organizations. Very promising developments along these lines are taking place in Halifax, Montreal, Hamilton and other cities. It is expected that during the next few years rapid progress will be made in linking the school with industry so that each may do its share in training Canada's future workers. A splendid start has been made in several branches of vocational education, but some important divisions of the work have not yet been started in the majority of the provinces. In no province has a program been undertaken which meets the educational and vocational requirements of all children.

The report contains full information as to existing arrangements throughout Canada for promoting vocational training.

Canadian Government Annuities Act, 1908

From September 1, 1908, the date of the inception of the Annuities Branch, up to and inclusive of March 31, 1926, the total number of annuity contracts issued was 7,210. Of the purchasers of these contracts, 784 have been cancelled, leaving in force on March 31, 1926, 6,426 contracts. The total amount of purchase money received during the same period was $11,701,443.47. During the fiscal year ending March 31, 1926, 329 immediate annuities and 339 deferred annuities, a total of 668, were purchased, amounting in the aggregate to $240,471.83, an average of about $360 per annuitant. The amount of purchase money received during the same period was $1,947,-144.05. The number of annuities in force on March 31, 1926, were as follows: Immediate, 2,187; deferred, 4,239, or a total of 6,426, and the amount of such annuities was $1,957,653.09. The amount received on account of the purchase of annuities from September 1, 1908, to March 31, 1926, exclusive of amounts returned to purchasers, was $11,701,443.47.

The report points out that by the Canadian Government Annuities Act, 1908, and amending Acts, an absolutely safe and immediately available form of investment for protection in old age has been provided the people of Canada, and any person taking advantage of the system will have behind his contracts the security of the whole of the Dominion, which is a matter of paramount importance as the

contracts may extend over a period of 50, 60, 70 or more years.

League of Nations International Labour Organization

The Department of Labour is entrusted with the duties arising out of the relations of Canada with the International Labour Organization. These have entailed much correspondence, not only with the International Labour Office, but also with other departments of the Dominion Government, with the provinces, and with employers' and workers' organizations. Replies have been prepared in the Department of Labour to various questionnaires which were circulated on behalf of the International Labour Office. The performance of these duties has necessarily entailed a close study on the part of officers of the department of the various technical questions which have figured on the various conference agenda and meetings of the Governing Body and of questionnaires received from the International Labour Office.

The report summarizes the action taken in Canada and in other countries to give effect to the various Draft Conventions and Recommendations adopted by the International Labour Conferences. These have been described in previous issues of the LABOUR GAZETTE.

WORKMEN'S COMPENSATION FOR DOMINION GOVERNMENT EMPLOYEES

A STATEMENT showing the number of claims on which payments were made by the Dominion Government under the provisions of the Workmen's Compensation Act (Statutes of Canada, 1918, Chapter 15) is included in the annual report of the Department of Railways and Canals for the fiscal year ended March 31, 1926. The statement covers all departments of government service as well as Canadian Government railways. The majority of the claims have to do with the Government railways, and it was found that the staff of the Department of Railways and Canals charged with the administration of the Act in relation to government railways of Canada, could also handle the claims arising in other branches of government service, the work was turned over to that department in the interests of economy and efficiency.

The Dominion Workmen's Compensation Act of 1918 provides as follows:—

1. (1) An employee in the service of His Majesty who is injured and the dependants of any such employee who is killed, shall be entitled to the same compensation as the employee, or as the dependant of a deceased employee, of a person other than His Majesty would, under similar circumstances, be entitled to receive under the law of the province in which the accident occurred, and the liability for and the amount of such compensation shall be determined in the same manner and by the same boards, officers or authority as that established by the law of the province for determining compensation in similar cases, or by such other board, officers or authority or by such court as the Governor in Council shall from time to time direct.

(2) Any compensation awarded to any employee or the dependants of any deceased employee of His Majesty by any board, officer or authority, or by any court, under the authority of this Act, shall be paid to such employee or dependant or to such person as the board, officer, or authority or the court may direct, and the said board, officer, authority and court shall have the same jurisdiction to award costs as in cases between private parties is conferred by the law of the province where the accident occurred.

The Act was amended in 1925 so as to provide that compensation should include medical and hospital expenses, the new section being retroactive in its operation to May 24, 1918.

The claims and disbursements, by Provinces, were as follows:—

—	Total Claims	Disbursements
		$
Nova Scotia Board	266	31,567
New Brunswick Board	713	61,236
Ontario Board	357	79,933
Manitoba Board	667	57,004
Alberta Board	60	9,789
British Columbia Board	131	16,091
Province of Quebec and Miscellaneous	329	66,760

The accompanying table shows the number of claims and the amount of disbursements in connection with accidents to employees of the various dependants of the government service during the past fiscal year:—

Department	Number of Claims				Disbursements
	Compensation and Medical Aid	Medical Aid only	Pension	Total	
Agriculture	3	2	3	8	2,014 07
Customs and Excise		4	1	5	750 20
Health	1			1	3,060 30
Indian Affairs	2		1	3	1,082 46
Interior	51	32	10	93	14,395 89
Justice			1	1	908 34
Marine and Fisheries	32	18	15	65	20,712 40
Mines	3	1	1	5	1,215 31
National Defence	14	9	7	30	6,222 53
Post Office	1	7	2	10	1,270 94
Public Works	70	37	16	123	14,296 33
Railways and Canals, Canadian Government Railways	1,412	515	138	2,065	235,378 80
Canals	51	9	25	85	16,823 11
Soldier's Civil Re-establishment	7	1	8	16	2,620 50
Soldier's Settlement Board	2			2	470 14
Trade and Commerce	9	2		11	1,159 01
Totals	1,658	637	228	2,523	322,380 33

The total amount paid in compensation, pensions, etc., under the Act from its enactment to March 31, 1926, was $1,464,978.

The amount of disbursements under the Act to the several provinces, balance deposit, etc., during the fiscal year 1925-26 is shown in the following table:—

YEAR 1925-1926

Board	Dominion expenditure including amounts advanced	Disbursements under the Act				Balance on deposit
		Compensation, pensions, etc.	Proportion administrative expenses	Interest	Total	
	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.	$ cts.
Nova Scotia	38,480 23	31,566 96	4,438 72		36,005 68	2,474 55
New Brunswick	66,828 81	61,236 37	5,691 92		66,928 29	*99 48*
Ontario	90,897 28	79,932 65	4,234 18		84,166 83	6,730 45

Totals, year 1925-1926	360,063 71	322,380 33	24,337 82	*944 89*	345,773 76	14,289 95

Theatrical Society at Vancouver

A society has been founded in British Columbia, with headquarters at Vancouver, under the title "Canadian Theatrical Arts and Crafts," its purposes being partly as follows:

The obtaining and maintenance of a fair rate of wages and just and equitable conditions of work for its members, and to ensure by all lawful means that only competent persons who are members of this society are employed as musicians, operators, stage-hands, scenic artists, carpenters, propertymen, electricians, stage-mechanics, flymen, and their respective assistants, or otherwise as artisans, workmen, or performers in or about the various theatres and places of amusement of like character.

To engage in work of an educational, social, or other character calculated to benefit the society or any of its members, or to improve the drama and kindred arts and the conditions and methods of its presentation.

To amalgamate, affiliate, co-operate, or enter into reciprocally helpful relations with any and all other societies, associations, or organizations throughout the world having objects wholly or in part similar to those of the society.

To promote and carry on these objects in any part of the world in conformity with and subject to any legislative conditions or restrictions which may be applicable.

SUNDAY WORK IN PROVINCE OF QUEBEC

Sunday League reports on Conditions existing in Pulp and Paper and Other Industries

THE text of the report of the provincial commission appointed early in 1926 to study the problem of Sunday labour in the Province of Quebec, with special reference to the pulp and paper manufacturing industry, was given in the LABOUR GAZETTE for October, 1926. Following the report was the text of a letter subsequently sent by the Honourable Premier Taschereau to the pulp and paper manufacturers, intimating that the provisions of the federal Lord's Day Act were thenceforth to be enforced. The effects of the report of the commission and of the Prime Minister's letter in regard to the practice of Sunday labour were summarized in a report made at the annual meeting of the Sunday League, held at the City of Quebec on December 5. The substance of this report was as follows:—

Three Rivers District.—The Saint Maurice Pulp and Paper Company ceases production at midnight on Saturday, for 24 hours, but on Sunday cleaning work is done from 12 to 6 a.m., and from 6 p.m. until midnight preparations are made for resuming production.

The International Paper Company ceases production of paper from midnight to midnight, but about 50 men are engaged from 8 a.m. until midnight in repairing machines. Manufacture of pulp starts at 4 p.m. on Sundays, this being stated to be necessary in order to permit of the resumption of paper manufacturing at midnight.

The St. Lawrence Paper Company suspends production on Sundays from midnight to midnight, but repairs are begun at 8 a.m., and continue the whole day.

The Wayagamack Company suspends paper production from midnight to midnight, but pulp production continues as formerly before 8 a.m., and after 3 p.m.

The Laurentide Company (Grand'Mère) suspends production for the entire day, making only essential repairs. This company, the report states, makes more serious efforts than the others to comply with the requirements of the law.

At Shawinigan, the Belgo-Canadian Pulp and Paper Company suspends ordinary work on Sundays from midnight to midnight, but the number of employees on repair work seems excessive.

Saguenay District.—In the Saguenay District the production of pulp and paper is generally suspended from midnight to midnight, but unnecessarily large forces appear to be kept busy throughout the day on repair work, in addition to the men who must be in their places before midnight in order that the machines may start running at that hour. At Chicoutimi, Port Alfred and Val-Jalbert, work is suspended not only on Sundays but on holy days, while at Jonquières, Kenogami and River Bend the plants run at full capacity on religious festivals. The report points out that while regular Sunday work may be stopped, it is usual to carry on special operations on that day. For example a new machine was lately installed on Sunday at the plant of Price Brothers at Kenogami. Construction work is done on Sundays, for example, at Arvida and at Chute-à-Caron, where forces of men were employed all summer in grading, carting, etc. Sunday work, in fact, is stated to be almost general at Chute-à-Caron.

Hull District.—The Eddy Company was the first in this district to change its practice in conformity with the Prime Minister's letter. Towards the end of September the directors posted notices that beginning Sunday, October 3, work would cease from midnight to midnight. All went well for some weeks, but a reaction set in among the men, with the approval of the management. Petitions were circulated asking for a return to former practices, and a division of opinion revealed itself, the employees who were members of the International Brotherhood of Pulp and Paper Mill Workers appearing to favour Sunday labour, while the members of the National and Catholic Union of Pulp and Paper Workers were opposed to the practice. For some weeks the Eddy Company's employees have ceased work at 2.30 a.m. on Sundays, but cleaning work that might easily be done on week days is carried on from 8 a.m. to 2 p.m. Elsewhere in the Hull district the violation of the Sunday law is reported to be flagrant and continuous. The International Paper Company employ thousands of men every Sunday in its construction camps at Chelsea, Farmer's Rapids and East Templeton. The Hull plant of the Canada Cement Company continues work on Sundays. The Booth pulp and paper mills at Ottawa, 90 per cent of whose employees reside at Hull, cease work only in the forenoon on Sunday.

Sherbrooke District.—At Windsor Mills the Sunday law was made effective on November 7, and although some opposition developed, having spread from Hull, it remained effective

as regards production, but repairs are done on Sundays, when the men detailed for this work commence at 9 a.m.

At East Angus the workmen are divided into three shifts of eight hours each. One shift still begins at midnight on Saturday, continuing until 8 a.m. on Sunday. Throughout Sunday repair work on machines is carried on to enable work to be resumed at midnight on Sunday. No attention, the report states, is paid at this plant to the Prime Minister's message.

At the Bromptonville plant of the same company 41 employees cease work at 7 a.m. on Sundays, returning at 11 o'clock on Sunday night. Considerable numbers of men are employed throughout the day on repairs, cleaning, etc.

Two shifts work the mine at Asbestos. The day shift starts on Monday morning, and the night shift stops at 6 a.m. on Sundays. Urgent repair work is also carried on on Sunday during summer.

Joliette District.—At Crabtree mills, near Joliette, production stops at midnight on Saturdays, but cleaning work which was formerly done during the week is now done during the early hours of Sunday. Regular work re-commences at 11 on Sunday night. (The League had received no report concerning the practices at the Beauharnois mills, owned by the same company). The McArthur Paper Company at Joliette carries on production until 6 a.m. on Sundays.

Quebec District.—Since November 7 the Donacona Pulp and Paper Company has stopped production at midnight on Saturday, starting up again at 10 o'clock on Sunday nights. The Anglo-Canadian Pulp and Paper Company carry on active construction work at their plants on Sundays.

The report of the Sunday League concludes by noting a lessening in the observance of Sunday throughout the province, particularly in connection with works of construction. In the field of commerce infractions of the Sunday law occur mostly in connection with the sale of so-called refreshments, under cover of which all kinds of commodities are sold to the public.

Adjustment of Trade Disputes in Germany

The German Federal Ministry of Labour has recently issued the annual returns for 1925 relating to the work of conciliation committees and individual conciliators, appointed in accordance with the Order of October 30, 1923, relating to conciliation. In 1924, 16,480 disputes were considered by conciliation committees, and 2,095 by individual conciliators. In 1925, the numbers were 12,360 and 1,058 respectively. In 1925, 338 disputes were withdrawn before the conciliation authorities took action, and these are not included in the above figures. Of the 12,360 disputes considered by conciliation committees in 1925, 692 were settled by the parties concerned before a date for conciliation proceedings had been fixed; 1,519 were settled during preliminary proceedings; 9,617 were dealt with by adjustment boards, and the remaining 532 were otherwise disposed of. Of the 1,058 disputes brought before individual conciliators, 172 were settled before or during preliminary proceedings, 803 were acted upon by adjustment boards, and 83 were otherwise disposed of.

Of the 9,617 disputes dealt with by adjustment boards, one or both parties refused to accept arbitration awards in 4,629 cases. In such an event, the Order provides that, if the settlement contained in an award appears just and reasonable with due consideration for the interests of both parties, and if its application is desirable for economic and social reasons, it may be declared binding by the competent conciliator or the Federal Minister of Labour. This course was followed in 601 cases in all.

Printing as a Profession

The Massachusetts Institute of Technology proposes, with the co-operation of the printing and allied trades, to establish a Department of Graphic Arts, Research and Engineering, international in scope, the purpose of which is as follows:—

(1) To establish a basis of graduate training uniting technology, engineering and art with the aim of creating a profession of printing equal in status with the professions of architecture and engineering.

(2) To provide adequately trained graduates for filling executive and similar responsible positions in the graphic industries.

(3) To supply instructors for other schools of printing who will be well grounded not only in the arts and engineering of the graphic arts but in the ascertainment of costs of production and of business administration.

(4) To make accessible to printing and its allied arts the existing complete research facilities of the Massachusetts Institute of Technology including its faculties and research Laboratories relating to chemistry, metallurgy, illumination, air conditioning, sanitation, and all applicable phases of engineering; and to conduct such research work under the direction of the various scientific faculties in co-operation with students.

FIVE DAY WEEK IN AMERICAN INDUSTRY

THE December issue of the *Monthly Labour Review* (published by the United States Department of Labour) contains a survey of the industries in the United States in which the 5-day week is now in force. The inquiry was suggested by the recent announcement by Mr. Henry Ford that the shorter week was to be regularly established in the industries with which he is associated (LABOUR GAZETTE October, 1926, page 927). A summary of the results of the inquiry is given in the *Review* as follows:—

Of the larger industries in the country, the regular full-time 5-day week is most prevalent in the manufacture of men's clothing. Here, according to the recent study by the Bureau of Labour Statistics, no less than 45 per cent of the establishments covered, and almost one-third of the employees, were working a 5-day week. The 40-hour week, however, was not common, the average hours being 44.3 per week.

The 5-day week has also made considerable progress in recent years in certain other branches of the clothing trades. Thus, under recent agreements, most of the fur workers (an industry employing about 14,000 persons) are working on a 5-day 40-hour week basis, but with provision for some Saturday work in the busy fall season. Similarly, the organized workers in the cloth hat and cap industry in New York and Philadelphia have agreements calling for a 5-day 44-hour week, to be reduced to a flat 40-hour week in 1927. The organized cloak, skirt, and dressmakers, of Boston; waterproof garment workers, cutters, pressers, and buttonhole makers of New York; the cloak, skirt, dress, and reefer makers' unions of New York; and the ladies' tailors and custom dressmakers' local, also of New York—all have the 5-day week and in most cases the flat 40-hour week.

Among some of the building trades the 5-day week is fairly well established, more than 6 per cent of the union membership in all the trades covered by the bureau's 1926 study working on a flat 5-day week basis, the trades most affected thereby being lathers, painters, and plasterers. In addition, the 5-day week for part of the year occurs not infrequently among the granite and stone trades.

In the printing and publishing of newspapers, especially those in foreign languages, a working week of 40 hours or less, but worked variously in five or six days, is quite frequent. In total, about 5 per cent of all the newspaper printing trades covered by the bureau's 1926 study were found to be on a working basis of not over 40 hours a week. In the book and job branch of the printing industry, the 5-day 40-hour-or-less week was infrequent, but was found to occur in a few cities.

Other organized trades covered by the bureau's recent study in which the 5-day week existed to a greater or less extent were: Bakers, 1.4 per cent of those covered by the study, and laundry workers, 7.8 per cent of those covered by the study.

In the large manufacturing industries covered by the regular wages and hours surveys of the bureau the 5-day week as a regular working practice was found, to a greater or less extent, in the paper box-board industry, in foundries and machine shops, and in the iron and steel industry. In the paper box-board industry the bureau's study made in the spring of 1925 found that in 60 per cent of the establishments, employing about two-thirds of the total working force canvassed, the productive forces were working on a regular 5-day-week basis.

In the foundries and machine shops covered by the bureau's study 3.8 per cent of the plants, employing 3.5 per cent of the working force, had a regular 5-day week. In addition, about 1 per cent of the plants and employees covered alternated between a 5-day week and a full 6-day week as the prevailing working basis for the majority of the employees. The actual weekly hours were usually in excess of 40, although a few plants limited their working time to a flat 5-day 40-hour week.

The iron and steel industry as a whole still has many employees on rather long hours, but the 5-day week exists in certain occupations in certain plants. Thus, the 1926 survey by the bureau found that 2.1 per cent of all the employees covered worked a regular 5-day or 5-night week. Most of the 5-turn workers were in the bar mills (13 per cent of the total employees therein) and in the puddling mills (6 per cent of the total employees therein).

In addition to the adoption of the 5-day week as a regular practice in certain industrial establishments, as described above, there has been, of recent years, a significant extension of the practice of Saturday closing in the summer months. The practice is most extensive in retail stores and offices, but is known to exist also in other lines of business, although no very satisfactory data are available on this subject.

Opinions on Mr. Ford's Policy

Mr. Ford, in the course of an authorized interview with a representative of *World's Work* for October, said:—

"The country is ready for the 5-day week. It is bound to come through all industry. In

adopting it ourselves, we are putting it into effect in about 50 industries, for we are coal miners, iron miners, lumbermen, and so on. The short week is bound to come, because without it the country will not be able to absorb its production and stay prosperous. The harder we crowd business for time the more efficient it becomes. The more well-paid leisure workmen get the greater become their wants. These wants soon become needs. Well-managed business pays high wages and sells at low prices. Its workmen have the leisure to enjoy life and the wherewithal with which to finance that enjoyment.

"Just as the 8-hour day opened our way to prosperity, so the 5-day week will open our way to a still greater prosperity. Twenty years ago," Mr. Ford continued, "introducing the 8-hour day generally would have made for poverty and not for wealth. Five years ago, introducing the 5-day week would have had the same result. The hours of labour are regulated by the organization of work and by nothing else. It is the rise of the great corporation with its ability to use power, to use accurately designed machinery, and generally to lessen the wastes in time, material and human energy that made it possible to bring in the 8-hour day. Then, also, there is the saving through accurate workmanship. Unless parts are all made accurately, the benefits of quantity production will be lost—for the parts will not fit together and the economy of making will be lost in the assembling. Further progress along the same lines has made it possible to bring in the 5-day week. The progression has been a natural one. The 8-hour day law to-day only confirms what industry had already discovered. If it were otherwise, then the law would make for poverty instead of for wealth. A man cannot be paid a wage in excess of his production. In the old days, before we had management and power, a man had to work through a long day in order to get a bare living. Now the long day would retard both production and consumption. At the present time the fixing by law of a 5-day week would be unwise, because all industry is not ready for it, but a great part of industry is ready, and within a comparatively short time I believe the practice will be so general in industry that it can be made universal."

On the other hand, the opinions of about thirty manufacturers in different branches of industry in the United States appeared recently in the *Pocket Bulletin,* the official monthly publication of the National Association of Manufacturers. These opinions were generally opposed to Mr. Ford's new policy for various reasons, of which the following are examples:—

The effect of the 5-day week would be to increase wages to meet the added expenses incurred by the workers through the additional holiday; an increase of wages of about 10 per cent would make American products more vulnerable to the economic designs of Europe; the present need in the world being for increased production there should be no decrease in the hours of work; while a man may do as much work in eight hours as in ten there is no reason to think he can do as much in five days as in six; the capital invested in manufactures cannot afford to be utilized only for 40 hours a week, and the shortening of hours would inevitably lead to increased cost of living without any assurance that there would be an increased wage; production would be curtailed and costs increased, the public would necessarily suffer and industrial progress would be retarded.

(The recent resolution of the American Federation of Labour in favour of a progressively shorter working week was noted in the November issue of the LABOUR GAZETTE, page 1089.)

Child Labour in Canneries in U.S.A.

The fourteenth annual report of the Children's Bureau of the United States, recently published, states that the most extensive undertaking of the industrial division of the Bureau during the past year was a study of conditions in regard to child labour in fruit and vegetable canneries in six states of the east and middle west. The study brings out the following facts:

Children under 16 are very generally employed in the canning industry. In some States, because of the exemption of canneries from the laws regulating the work of children in other manufacturing industries, many children are employed without adequate legal protection; even in States where laws exist for their protection a very considerable number of children are employed in violation of these laws. However, when the figures obtained in the inquiry are examined separately, they show a great variation between the several States in the extent to which children are employed in violation of the prescribed legal standards. For example, the proportion of children under 16 who are employed below the legal working age, which is about one-third of the total number, varies from 43 per cent in one State to 2 per cent in another, and the proportion of minors employed in violation of the State hour standards varies from 11 per cent to 92 per cent.

LEGISLATIVE DEMANDS OF ORGANIZED LABOUR

Proposals Submitted to the Dominion Government by the Trades and Labour Congress of Canada

THE legislative program of the Trades and Labour Congress of Canada was submitted to the Dominion Government on Dec. 15, 1926, the views of the Trades Congress being presented by its executive officers—Messrs. Tom Moore, president; J. T. Foster, James Simpson and Robert Tallon, vice-presidents; and P. M. Draper, secretary-treasurer. In addition to the executive of the Trades Congress the delegation was composed of the following: A. Bastien, general representative, American Federation of Labour; Leon Worthall, general representative, Journeymen Barbers' International Union; W. G. Powesland, vice-president, International Brotherhood of Blacksmiths; A. E. W. O'Dell, general representative, Boot and Shoe Workers' Union; J. D. Corcoran, general representative, International Union of Brewery, Flour, Cereal and Soft Drink Workers; Geo. Ashley, general representative, International Association of Bridge, Structural and Ornamental Iron Workers; W. Thorne, International Union of Bricklayers, Masons and Plasterers; Frank McKenna and J. Corbett, vice-president and chairman C.N.R. Central Region, respectively, Brotherhood of Railway Carmen; Arthur Martel and Jas. F. Marsh, executive board member and general representative, respectively, United Brotherhood of Carpenters and Joiners; E. Ingles, John Noble and James P. Broderick, vice-president and general representatives, respectively, International Brotherhood of Electrical Workers; Frank Healey, general representative, International Union of Steam and Operating Engineers; A. D. Dear, vice-president, International Association of Fire Fighters; F. W. Bush, executive board member, United Garment Workers of America; S. Polakoff, executive board member, International Ladies Garment Workers' Union; Jas. Somerville, vice-president, International Association of Machinists; W. V. Turnbull, grand vice-president, W. Jewkes, secretary, and W. Crampton and S. Burns, assistant chairmen (C.P.R. System Federation), and R. Hessel, vice-chairman (G.T.R. System), Brotherhood of Maintenance of Way Employees; A. J. Crawford, general representative, International Association of Sheet Metal Workers; Jos. P. Hunter and Fred Molineux, vice-president and general representative, respectively, Brotherhood of Painters, Paperhangers and Decorators; J. Ward, vice-president, International Association of Plasterers; J. W. Bruce, general representative, United Association of Journeymen Plumbers and Steamfitters; Maurice Labelle, vice-president, International Brotherhood of Pulp, Sulphite and Paper Mill Workers; Geo. R. Brunet, general representative, International Printing Pressmen and Assistants' Union; R. Trepannier, vice-president, Amalgamated Association of Street and Electric Railway Employees; W. P. Covert, vice-president, International Alliance Theatrical Stage Employees; J. G. A. Decelles, executive board member, Commercial Telegraphers' Union; J. A. P. Haydon, legislative vice-president, Ontario and Quebec Conference Typographical Unions; Walter Barrett, field secretary, International Allied Printing Trades Association; Thos. Black, Montreal Allied Printing Trades Council; John J. Manning, secretary-treasurer Label Trades Department, American Federation of Labour; Alex McMordie and W. D. Rehder, secretary-treasurer and 2nd vice-president, respectively, Federated Association of Letter Carriers; John F. Thompson, secretary, London Trades and Labour Council; John Munro, Toronto District Trades and Labour Council; E. Hamelin, National Association of Marine Engineers of Canada; Miss Mary McNab representing *Canadian Congress Journal.*

The members of the Cabinet present to hear the submission of the legislative proposals of organized labour were: the Prime Minister, the Right Honourable W. L. Mackenzie King; Honourable Peter Heenan, Minister of Labour; Honourable Ernest Lapointe, Minister of Justice; Honourable J. C. Elliott, Minister of Public Works; Honourable P. J. Veniot, Postmaster-General; Honourable P. J. A. Cardin, Minister of Marine and Fisheries; Honourable James Malcolm, Minister of Trade and Commerce; Honourable Dr. J. H. King, Minister of Health and Soldiers' Civil Re-establishment; Honourable Charles A. Dunning, Minister of Railways and Canals; Honourable W. D. Euler, Minister of Customs; Honourable Lucien Cannon, Solicitor-General; Honourable W. R. Motherwell, Minister of Agriculture; Hon. Col. J. L. Ralston, Minister of National Defence; Honourable Senator Raoul Dandurand, Minister without portfolio.

The Prime Minister, in reply to the agenda submitted by the deputation, promised that the proposed legislation would receive the careful consideration of the members of the

Government; that each Minister would make a careful study of the proposals affecting his particular department, and that the entire proposed legislative program would be then discussed at a meeting of the Cabinet with a view to ascertaining what subsequent action would be taken thereon.

The proposals submitted were divided into three sections, viz: (1) summaries of subjects detailed in previous presentations; (2) new briefs on union label registration, old age pensions, senate reform, picketing and injunctions, election act amendments and immigration; (3) references to subjects for subsequent departmental discussion. It was pointed out in the introduction to the memorandum that the legislative proposals submitted were based upon the decisions of the 42nd annual convention of the Trades and Labour Congress of Canada, which was held in Montreal in September, 1926. As several of the proposals dealt with in Part One of the memorandum (containing summaries of subjects detailed in previous presentations), were published in the full issue of the LABOUR GAZETTE for April, 1926, only passing reference is made to such proposals in this article. The demands made in regard to the subjects dealt with in Part One, were as follows:

Eight Hour Day.—Urging that effect be given to the eight-hour day convention of the Washington (1919) International Labour Conference in so far as it lies within the jurisdiction of the Dominion authorities with particular regard to: (*a*) all those employed in works governed by the Fair Wage regulations of the Dominion Government; (*b*) all those employed on works carried on direct by the Federal Government or in the employ of any Government Department.

One Day's Rest in Seven.—Attention was again directed "to the inadequacy of the Lord's Day Act to provide for all workers enjoying one day's rest in seven."

British North America Act Amendments.—These included: (1) The fostering of "national unity" by giving greater powers to the Federal Government to deal with social and labour legislation; (2) The abolition of appeals to the Privy Council, and the establishment of the Supreme Court of Canada as the highest court of appeal; (3) Giving the Federal Government the undisputed powers to administer effectively throughout Canada the Industrial Disputes Investigation Act and its subsequent amendments; (4) To bring about such changes in the constitution of Parliament as may be necessary to make the decisions of the elected representatives of the people paramount.

Criminal Code and Immigration Act Amendments.—Amendments were sought "which would restore the former provisions of these Acts and take from them the pernicious clauses inserted by Parliament in 1919 which discriminate against British-born Canadian citizens as regards deportation without trial and seriously restrict the rights of freedom of speech, press and assembly."

Unemployment and Unemployment Insurance.—In regard to this subject a scheme of unemployment insurance, such as was outlined in the legislative program of the Congress of 1924 and 1925, was again advocated.

National Fuel Policy.—The memorandum emphasized that definite measures "should now be inaugurated which would ensure proper development of the coal resources of Canada."

Militia Act Amendments, Military Training, Etc.—The proposals on these topics were a reiteration of previous requests, urging action (1) to prohibit the maintenance by industrial corporations of armed forces; (2) to give the Federal Government discretionary powers regarding the requisitioning of troops by provincial or municipal governments; (3) to discontinue government aid for the encouragement of military training in public schools.

International Labour Organization.—Under this heading it was again urged that the Federal Government give effect to a number of recommendations resulting from labour conferences on questions concerning: (1) limiting the hours of work in industrial establishments to eight in the day and forty-eight in the week; (2) the use of white lead in painting; (3) weekly rest in commerce and industry; (4) the simplification of the inspection of immigrants on board ship; (5) seamen's articles of agreement; (6) unemployment, etc.

In addition to the above subjects recommendations were submitted as follows:—

(1) that the Canadian Government Merchant Marine be given the contract to carry on the trade with the West Indies, as called for in the West Indies Treaty, that the Canadian coast-wise laws be revised and that a duty be placed on ships used exclusively in Canadian trade;

(2) commending the activities of the Research Council and directing attention to the advisability of providing a National Research Institute;

(3) amending the Bankruptcy Act so as to give priority to wage claims;

(4) urging full reimbursement of Home Bank depositors;

(5) requesting that organized labour be given representation on the Dominion Advisory Tariff Board;

(6) advocating the simplification of legislation relating to and for the encouragement of co-operative societies.

Part Two of the memorandum containing demands for legislation was as follows:—

Memorandum re Senate Reform.—By continued maintenance of the Senate as a non-elective body, having absolute veto power over legislation enacted in the House of Commons, a form of Government exists which is contrary to real democracy.

For many years representations have been made through the Trades and Labour Congress of Canada for action to be taken which would abolish the Senate as a non-elective body and make it responsive to public opinion.

Over a long period of years the Senate has shown itself as definitely opposed to permitting the enactment of social and labour legislation of benefit to the masses. Without enumerating in full all the measures which, after having been passed by the elected representatives of the people in the House of Commons, have been rejected by the Senate, attention is particularly directed to the following:—

Bills to amend the Immigration and Emigration Act so as to repeal the amendments to that Act introduced at the 1919 sessions of Parliament have been rejected by the Senate five times. On the first occasion, in 1920, this was a Senate Bill introduced by the Hon. Senator G. D. Robertson, and was defeated in that Chamber by 22 votes to 21. In four subsequent years, namely in 1921, 1923, 1924, 1926 Bills were introduced in the House of Commons by the respective Ministers of Immigration and though they passed that Chamber practically unanimously were nevertheless rejected by the Senate.

Bills to amend the Criminal Code so as to restore the provision existing prior to 1919 in respect to fredom of speech, press and assembly have passed the House of Commons during four different sessions of Parliament but each time been rejected by the Senate.

Bills to permit the registration of Union Labels; amend the Industrial Disputes Act; provide reimbursement of certain Home Bank depositors, are further measures which have been passed by the House of Commons and rejected in the Senate.

In addition to these the Senate's action last year in defeating the Old Age Pension Bill as presented to it from the House of Commons aroused Dominion-wide resentment. All these actions emphasize that whatever progress may be made in the elected House of Commons is futile so long as the present veto power of the Senate remains in effect.

Faced with a similar situation in Great Britain changes were brought about there which curtailed the powers of the second Chamber, the House of Lords—to the extent that measures which pass three successive sessions of the House of Commons become law over-riding the veto previously exercised by the non-elective second Chmber.

Similar changes must be secured regarding the Canadian Senate, if confidence is to be restored in constitutional form of government as a means of giving effect to the expressed will of the people.

We venture to assert that such a change would be supported by public opinion throughout Canada as evidenced by the expressions of numerous other public bodies, by press editorials, etc.

Whilst continuing to hope that more general and drastic changes in the constitution of the Second Chamber will ultimately be brought about, we confine our requests at this time to the minimum reform above outlined, namely: "That the veto of the Senate should be made inoperative in respect to legislation which has passed three different sessions of the House of Commons," and urge that steps be taken during the present session of Parliament to give effect to the same.

Memorandum Re Electoral Reform and Election Act Amendments.—Believing that the system which prevails of demanding that those accepting Cabinet Portfolios return to their constituencies to seek re-election immediately after a general election is a waste of time, money and energy, we would ask that the necessary legislative changes be enacted which would abolish this practice where such promotions are made within two years subsequent to a general election.

In making this request it is not intended that those who may be appointed to Cabinet positions and have not, at the time, a seat in Parliament should hold such offices without securing election as Members of Parliament.

The change herewith submitted would make possible a much freer choice of Cabinet Ministers according to their suitability and qualification of the office instead of such choices being governed, as we believe has often been the case, by their ability to retain the constituency for the party in power.

From time to time cases arise which emphasize the need for some change in the method of appointment and control of returning officers and their subordinates charged with the conduct of Federal elections. These circumstances we believe can be attributed to the present practice of making appointments

of returning officers a matter of party patronage. Feeling that they owe their appointment to the political party to which they belong, the same practice is followed by them in making their appointments of poll clerks, etc.

This interjection of political partyism into what should be an impartial state function not only lends itself to the arousing of suspicion as to unfair practices but also, in the case of elections following each other in close sequence, leads to inefficiency through the replacement of returning officers before they have had a fair opportunity to become fully acquainted with their duties.

By the legislation enacted in 1920 provision was made for the appointment of a Chief Electoral Officer and for the safeguarding of his administrative authority against undue political interference. The success which has attended the removal of this important office from the field of party politics leads us to express the opinion that the extension of similar protection to the positions of returning officers, would remove much of the dissatisfaction as to the conduct of elections which now exists.

We recommend that all official election appointments should be made on a non-political basis and that the incumbents should be thereafter under the full control of the Chief Electoral Officer, Returning Officers not to be subject to removal from office except for just cause and on the recommendation of the Chief Electoral Officer.

Under the present system of representation, the House of Commons bears very little comparison to the actual numbers casting their ballots in favour of the respective political groups and as a step towards making it more representative of the people we would ask for changes in the Election Act so as to provide for proportional representation in group constituencies and the use of the transfer.

During the 1925 session of Parliament an amendment to the Election Act was passed by the House of Commons providing for a half day holiday on Election Day, but this failed to become law owing to an error in the same not being incorporated in the Bill sent to the Senate. In view of this, the Government passed an Order in Council providing for a half day holiday for the Federal Elections held in 1925. This Order in Council was not clear, however, as to whether the holiday should be an extension of the provision for two hours time, with pay, which exists in the present Act and a certain amount of dissatisfaction and confusion arose therefrom. We would now request that the Election Act be amended so as to make it compulsory for employers to grant a half day holiday, with pay, to all workers on Federal Election Day.

The platform of the Liberal Party, adopted at the National Convention in 1919, contains a plank reading as follows:—

> Restoration of the control of the executive by parliament, and of parliament, by the people through a discontinuance of government by order in council and a just franchise *and its exercise under free conditions.*

We desire to point out that there is a growing practice by a number of public authorities to impose restrictions which prevent their employees from exercising their full political rights as citizens and we believe this is in contradiction to the declaration above quoted and would therefore urge the enactment of such legislation as would prevent the continuance of interference of this nature.

The forfeiture of election deposits as called for in the present Act creates a hardship and is in the nature of a penalty on poverty. In a free democracy integrity and ability should supersede wealth as a qualification for election to Parliament. We would, therefore, ask for the abolition of all election deposits and forfeiture of same, and the substitution thereof of a qualifying requirement that a candidate should secure a stated number of signatures of electors before his nomination can be accepted.

Repeated requests have also been made for the repeal of clause 10 of the Franchise Act, 1920, which prohibits unincorporated associations, such as trade unions, etc., from making voluntary contributions towards election campaigns and Clause 11 of the Franchise Act, 1920, which prohibits any person not being an elector and who resides without Canada, from assisting in any manner in election campaigns. It is true that these clauses have not been strictly enforced. This, however, only creates a lack of respect for the law as a whole and we venture to assert is an added argument for their repeal which we again reiterate.

Memorandum re Registration of Union Labels.—Considerable satisfaction was expressed during our recent convention that after many years of effort progress had been made to the extent that a Bill was again introduced during the last session of Parliament which aimed to give effect to our oft repeated requests for legislation which, by allowing of their registration, would protect the union labels, shop cards, etc., of labour unions against their unauthorized use and infringement. This was modified, however, by the knowledge that the Government of the day

had not seen fit to sponsor this Bill and in that way make sure of its coming before Parliament for consideration. This is all the more regrettable because of the fact that this Bill would not have raised any party issues as was assured by the personal promises of members of every political party to give it their support.

Measures similar to Bill 204 of the Session of 1926 have been passed previously by the House of Commons though later rejected by the Senate. The last occasion of such action being during the session of 1906.

In 1919, at the instigation of the Government, the matter of the registration of union labels, etc., was the subject of a joint conference held in Toronto at which the Government, employers and workers, were represented. At this conference a Bill similar to the one now under discussion was approved but no action taken to have it submitted to Parliament until last session.

We now ask the Government to reintroduce Bill 204 during the present session of Parliament and use its full influence to the end that it may be enacted into law.

Memorandum re Immigration and Emigration.—The general policy of the Trades and Labour Congress of Canada respecting immigration and emigration is briefly summarized in the following declarations adopted at this year's convention of the Congress:—

1. For the peopling of Canada, through immigration, by a free, enlightened, moral, energetic and law abiding class of citizens; all false inducements to secure immigrants to be prohibited and the fullest accurate information freely circulated in the countries from which they come. Whilst regard should be had for the welfare of those who seek our shores, the first consideration should be the Canadian people and the betterment of our common country, therefore, nationalities and classes of people who either by temperament, non-assimilative qualifications, habits, customs or absence of any permanent good which their coming brings to us are not a desirable acquisition to our citizenship.

2. For strict application of the laws concerning the admission and control of Orientals, pending the enactment of legislation for total exclusion.

3. Abolition of all bonuses or grants to private agencies, and that the British Government be requested to assume fuller supervision and control over emigrant booking agencies operating in the British Isles.

4. For the prohibition of entry of "Contract Labour," unless certified as necessary by, and secured through, the Employment Service of Canada and for the prohibition of entry of labour engaged to replace workers during industrial disputes.

5. For the maintenance of the Department of Immigration under a separate Minister of the Crown, and for the creation of Dominion Advisory Council on Immigration on which Labour shall have representation, and which would co-ordinate federal, provincial and other immigration activities, prevent overlapping of same, and formulate policies suitable to conditions as they exist from time to time.

6. That in order to relieve congestion in industrial centres, land settlement and colonization schemes should be made widely known in Canada and the same opportunities and assistance offered residents of Canada as are given to those of the British Isles and foreign countries.

7. For the continued prohibition of the admission of child immigrants under working age, unless accompanied by or coming to join their parents or other responsible relatives.

8. That representation be made by the Dominion Government to the United States Authorities with the object of restoring equal rights of entry to the U.S.A. to all Canadian citizens, irrespective of their places of birth.

9. Repeal of 1919 amendments to the Immigration Act which discriminates against British-born citizens, and which bring within prohibited classes these exercising reasonable right of assembly and freedom of speech.

10. For international exchange of migration statistics and compliance with 'Recommendation" of the International Labour Office (1923) to compile and publish statistics regarding emigration from Canada, as well as immigration to Canada.

11. For medical and other examination of emigrants to take place, as far as possible, at port of embarkation.

12. For deportation of those entering Canada, under assisted immigration schemes and exempt class regulations and who, within twelve months, seek or accept employment in other occupations.

In respect to Clause 4, numerous cases have been brought to our attention where the importation of labour by the employers concerned could not be justified on the grounds of being unable to secure such labour in Canada. Neither is it likely that the men so imported could be assured a lengthy enough period of employment to allow them to reasonably establish themselves in Canada, unless this was given to them by the discharge of other workers. The regulations now asked for were enforced by the government up to a few years ago and we are of the opinion that permission to import these workers would not have been granted had this past policy of the Government been followed, and the statement from the Minister of Labour, who is charged with the administration of the Employment Service Act, first been necessary.

Because of the injustice which the present practice inflicts upon both the resident Canadian workers and the imported immigrant we strongly urge the adoption of the recommendation embodied in this Clause.

Respecting Clause 5, we are pleased to note that the Department of Immigration is now under the administration of a separate Minister of the Crown. We would strongly urge, however, the adoption of our recommenda-

tion to create a Dominion Advisory Council to assist the Minister, somewhat along the same lines as the Employment Service Council and the Health Council now act as advisory bodies to the Minister of Labour and of Health.

We are strongly of the opinion that the creation of such a Council would aid in formulating and putting into effect a Migration policy which would receive the support of the great majority of Canadian citizens.

In elaboration of Clause 6 of our Recommendations, it has been noted that the plan of settling Canadian farm lands with immigrants from the British farm training colonies is claimed to be meeting with considerable success. These immigrants were not originally farm workers but were drawn from the industrial centres of the British Isles and we see no reason why, if these claims are found to be justified, that similar training colonies could not be established for the benefit of those at present living in the industrial centres of Canada.

It might be possible to use the Dominion and Provincial Experimental Farms for a beginning of this experiment and if those who qualify could be assured of financial assistance to establish themselves on Canadian farm lands we are convinced that this would lead to a relief of the congestion which often occurs in the industrial centres of Canada and be a beginning of a genuine "back to the land" movement.

Attention has been drawn in another section of our legislative programme to the injustice which still exists against British-born citizens by reason of the refusal of the Senate to accept amendments to the Immigration Act repealing those of 1919 and we trust that these efforts will be persisted with and similar legislation again introduced during the present session of Parliament. In this connection we would respectfully point out that three present Ministers of the Government, namely the Minister of Railways, the Minister of Immigration and the Minister of Labour, being British born, may be liable to arbitrary deportation, without due trial, under the Act as it now stands.

We desire to direct your attention to the resolution adopted by the Dominion Council of Health at its last meeting and which reads:

> That in the opinion of this Council all immigrants should be medically examined as near as possible to their homes by medical officers paid by our Government; that in cases where persons are admitted under bond the Government of the provinces involved be notified of the destination of such persons.

This supports our recommendation in Clause 11 and we urge that effect be given to the same.

Without elaborating further on the other clauses of the programme submitted we would urge that favourable action be taken thereon.

Memorandum re Criminal Code Amendments Affecting Picketing, Injunctions, etc.— In pursuance of powers granted to the Federal Government under Section 91, Clause 27 of the British North America Act, the Criminal Code has been enacted, Section 501 of which prohibits watching or besetting certain places with certain objects therein set out. Interlocking with this, Section 92 of the British North America Act, gives certain powers to the Provincial Governments respecting property and civil rights in the provinces, under which powers numerous injunctions have been issued seriously interfering with the right to peacefully conduct a strike. While these two subjects are very closely related yet we appreciate that the Federal Government can only take action within the limits of their own jurisdiction.

The right to peacefully picket was defined and made legal by Section 12, Chapter 173 of the Consolidated Statute 1876 but when the Criminal Code 1892, Chapter 29 was compiled this provision legalizing peaceful picketing was omitted and has not yet been reinserted.

In representations previously made to the Government, the Executive Council of the Trades and Labour Congress of Canada has pointed out the necessity of amending the Criminal Code to adequately protect trade unions and trade unionists in their right to peacefully picket during strikes. In reply to these representations we have been told that the provisions of the Criminal Code are adequate to afford the protection asked for, despite the fact that these provisions lack the clarity of definition common to British law. Events which have occurred during the past year only serve to strengthen the conviction previously expressed that the Criminal Code should be amended to prevent recurrence of the action of the Courts in restraining trade unionists from peacefully picketing.

A large number of cases could be cited in which legal decision both favourable and unfavourable have been rendered, but as this has been dealt with in detail on previous occasions, we do not consider it necessary to do so at this time. The right to strike must carry with it the right to persuade the unorganized to organize and join the organized in strikes and to employ methods such as picketing without which the right to strike

becomes ineffective and valueless. British law has always recognized that a strike must be effective to be of any service and in the 1906 "trade disputes act" the clause of the 1875 Act legalizing picketing merely for the purpose of obtaining or communicating information was repealed and the following clause enacted:—

> It shall be lawful for one or more persons acting on their own behalf or on behalf of a trade union or of an individual employer or firm in contemplation or furtherance of a trade dispute to attend at or near a house or place where a person resides or works or carries on business or happens to be, if they so attend merely for the purpose of peacefully obtaining or communicating information or of peacefully persuading any person to work or abstain from working.

The Criminal Code of Canada did originally contain somewhat similar provisions. These were not taken out by any Act of Parliament, but, as previously stated, arbitrarily omitted when the Criminal Law was codified in 1892.

We again, therefore, reiterate our request for amendments to the Criminal Code which would restore the right previously held by organized labour in this respect.

We desire further to direct attention to our request for repeal of Sections 97a and 97b which were inserted in Chapter 146 (the Criminal Code) in 1919. These sections give power to seize without warrant persons or property of those belonging to associations which seek to bring about "governmental, industrial or economic change" by the use of "force, violence or physical injury to persons or property." We have no desire to seek privilege to commit any unlawful act and our contentions that the repeal of these sections would not give this privilege to anyone is supported by the fact that up to 1919 the property and persons of all the citizens of Canada were amply protected through the provision of Section 69 and other clauses of the Criminal Code.

The insertion of the word "force" in addition to violence and physical injury, etc., has lead to much abuse. Some judges held that a sympathetic strike comes within the definition of "force" and that sufficient terror may be created in a person's mind to force them to do something that they otherwise might not do if, during industrial disputes, they have their "motions watched and have to encounter black looks," (Justice Metcalf, Russell case, Winnipeg). Similar views were also expressed in a memorandum issued by the then Minister of Justice, the Hon. C. J. Doherty, to the Trades and Labour Congress of 1921.

We appreciate that measures to remove the cause of this later complaint have been introduced to Parliament by the Government during the past few years and that they have passed the House of Commons but have been rejected in the Senate, and we would urge that efforts to secure these amendments be renewed at the present session of Parliament.

Memorandum re Old Age Pensions.—We desire to express our appreciation of the efforts made by the Government in the last session of Parliament to have legislation enacted which would meet, in some measure, the needs of the aged workers of this country who find themselves without means of support in their latter years.

The Bill as passed by the House of Commons last year provided for the cost of old age pensions to be borne equally by both Federal and Provincial authorities, although the cost of administration would be chargeable to the provinces.

After having the opportunity of discussing this matter with members of the Dominion Cabinet before its introduction into Parliament at its last session we reached the decision to lend assistance towards having the Government Bill passed into law although we did, at that time, express grave doubts as to whether the provisions of the Bill would meet with the same public approval as might have been the case had our own proposals been accepted. When this Bill was under discussion in the House of Commons, the official Opposition strongly objected to it on the grounds that it would discriminate between citizens living in a province which had accepted the provisions of the measure and those resident in any province which had not done so. In the Senate the same objections were raised and it was stated that this was one of the chief reasons for its rejection by that body.

Since then a Federal election has been held and the subject of old age pensions been a matter of public discussion on many platforms in all parts of the country. It has been made very clear that there is strong public support for any measure which would apply equally to all Canadian citizens irrespective of the province in which they reside, and that this could be best brought about by the Federal Government assuming the whole responsibility for the cost of such pensions.

The question of whether existing provincial machinery or a new national administration should be created is one that could be more easily dealt with than that of obtaining consent of all provincial legislatures to agree to the financial responsibility incurred by the

acceptance of the Bill as introduced in the last session of Parliament.

There is also undoubtedly strong public support for much more liberal provisions being made to those to whom the Act should apply, both as regards the age at which they would become eligible and also as to the amount of additional income which the recipients of old age pensions may be possessed of.

Organized labour strongly objects to the tendency to pauperize old age pensioners, neither does it believe that the savings of workers should be made a disqualification for state pensions, at least not until a much higher standard is reached by the combined pension and whatever income the pensioner may possess, than that which is set out in the Bill considered in the last session.

In view of these circumstances, we press for the enactment of a federal law under which pensions would be payable upon reaching the age of 65 years and after 15 years domicile *anywhere in Canada.* The sum of such pensions to be not less than $30 per month and payable to those whose income shall not exceed, including the old age pension, the cost of living as published in the official Labour Gazette of the Dominion Government.

Part Three of the Legislative program of the Trades Congress referred to subjects for discussion with certain of the members of the Cabinet. The memorandum submitted to the Minister of Labour subsequent to the main interview was as follows:—

Industrial Disputes Investigation Act.—It having been made clear that the amendments to the Industrial Disputes Act of 1925 do not provide for the granting of a Board without the formality of taking a strike vote, we would, therefore, repeat our previous request that Clause B of Subsection 2 of Section 15 of the Industrial Disputes Investigation Act be amended by substituting "A declaration of failure to reach agreement by direct negotiations" for the present oath which reads: "To the belief of the declarant a strike or lockout will be declared." The reasons for the suggested change are that the taking of a strike vote many times acts as a deterrent to conciliation.

Fair Wages Policies.—That the present Fair Wages Regulations be amended:

(*a*) By repealing the latter part of Clauses 2 and 3, Schedule A of Order in Council amending same April 9, 1924, and which refers to certain conditions under which the powers of the Minister of Labour shall not be exercised;

(*b*) That provision be inserted for moneys collected under Section D, Clause 4 of Schedule A shall be paid direct by the Government to the workers and also for the collection of penalties from contractors violating the fair wage regulations;

(*c*) That Clause 1, Schedules A and B be amended to provide for hours of labour "not to exceed eight hours per day" instead of "such hours as are customary in the District, etc.;"

(*d*) That Clause 5, Schedule A, providing for clerks of works or inspectors to ensure due observance of the fair wage provisions of the contract be fully enforced;

(*e*) That these regulations, with amendments recommended, should be embodied in an Act of Parliament so as to definitely ensure their application to all government works undertaken by commissions or other similar authorities where government funds are provided partly or in whole, or where guarantees may be given by the government for the raising of moneys in connection with such works.

Fair Wage Officer.—The requests of the New Brunswick Federation of Labour and the St. John Trades and Labour Council that a Fair Wage Officer be appointed for the Maritime Provinces are endorsed.

Government Plant Conditions.—It is urged that established standard working conditions should be observed in Government plants manufacturing uniforms or doing other similar commercial work and we suggest that this will be best assured by the adoption of such conditions as will enable the union label to be fixed on these products.

Hiring of Labour During Trade Disputes.—Action is requested which would ensure the observance by existing private employment agencies of the same regulations as apply to those operated under the Employment Service of Canada and that employers advertising in the Press for Labour during trade disputes shall be required to make known the existence of such disputes.

The memorandum to the Postmaster-General made the following demands:—

Power of Civil Service Commission.—Requests are reiterated for the repeal of Section 45B of the Civil Service Act 1919. This is considered as the best means of overcoming the arbitrary powers now conferred on the Civil Service Commission respecting classification and fixing of salaries of postal employees.

Departmental Councils.—It is further respectfully urged that machinery be established, either through the Industrial Disputes Investigation Act or by the setting up of Departmental Councils whereby classification, fixing of salaries, adjustments of grievances, etc., arising therefrom, may be dealt with promptly and with justice to the men concerned.

Salary Revision.—Salaries paid to Letter Carriers have not been increased commensurate with the increased cost of living since 1918 and it is urged that the long delayed upward revision of salaries paid this class of workers be immediately made effective.

Penalties for Theft.—Our attention having been directed on several occasions to the severity of the minimum penalty to which a postal employee is subject for theft, and without wishing to appear as condoning theft, and whilst giving full recognition to the importance of maintaining public confidence in the Postal Service, it would appear that where an offence is of a minor nature that the trial judge should have some discretionary powers allowed to inflict less than the present minimum penalty, namely, three years' imprisonment, and we therefore ask that the Criminal Code be amended accordingly.

Christmas and New Year's Holidays.—As Christmas and New Year's Day are recognized legal holidays enjoyed by the great majority of the people of Canada, it is requested that all delivery of mail by letter carriers be suspended on Christmas Day and New Year's Day.

Representations to the Minister of Marine and Fisheries were as follows:

Shipping Act Amendments.—In the event of the new Shipping Act as prepared by the Department of Marine and Fisheries in 1914 not being proceeded with this session it is requested that the present Act be amended to include the following:—

That provision be made in articles for repatriation of all members of crews to place or places of their engagement after they have completed their duties.

Cancellation of the Masters present authority to discharge without justification, any member or members of the crew under the jurisdiction of the chief engineer, without consulting the chief engineer.

That after official discharge books are issued and in operation no man shall be available for re-engagement on any Canadian vessel until his discharge book has been duly stamped up to the date of discharge from last engagement by the proper authority.

That the chief engineer and his engine room staff sign articles on separate sheets from the Deck Department.

Regulations for discipline, Article 3, to be amended so as to specifically include ALL engineers, as a protection from insulting or abusive language, instead of the master and mate only as at present.

Articles to be published both in the English and French languages.

That a qualified marine engineer be appointed to sit as a commissioner with the Wreck Commissioners upon all cases.

That a health inspector be appointed at each important port in Canada for the purpose of inspecting health conditions on Canadian ships.

That all mechanically propelled ships, of whatever capacity plying for hire, either in the freight or passenger service, must carry certified engineers.

That the system of computing the capacity of the power now used on steamships, and known as nominal horse-power, be abolished and in its place the indicated or actual brake horse-power be used, known as standard horse-power, and for the purpose of accommodating our present laws and regulations to conform with this standard horse-power, the ratio be calculated on the basis of 100 nominal horse-power, equal 500 standard horse-power.

Equalization of Wages.—That steps be taken to equalize wages paid to the marine engineers by the different departments of the Government throughout Canada.

Pensions.—That employees in the Marine and Fisheries and Public Works Departments of the Federal Government who were eligible for superannuation or pension under the Calder Act be made eligible for the same privileges under the Civil Service Act.

Requests presented to the Minister of Public Works were the following:

Marine Engineers Conditions.—That co-operation be given to the Department of Marine and Fisheries in giving effect to the changes in wage rates, provision for pension, etc., as outlined in the requests submitted to the Department of Marine and Fisheries on behalf of the National Association of Marine Engineers of Canada.

Federal Office Cleaners Conditions.—That Federal Office cleaners be paid on an annual salary basis as permanent employees, including privileges of sick leave and holidays with pay and superannuation.

To the Minister of Railways a demand was made that the Railway Act be amended so as to provide that employees be paid every two weeks on a regular pay day. The present system of paying twice monthly, bringing the pay day on different days of the week, is held to cause very great inconvenience to these employees.

Request of Organized Labour for Provincial Legislation

Saskatchewan.—The Provincial Executive of Saskatchewan, which is the provincial adjunct of the Trades and Labour Congress of Canada, waited on Premier Gardiner and his Cabinet, and presented to the Saskatchewan Government proposed legislation affecting labour.

Among the delegation were: Alex. M. Eddy. Executive Chairman; C. G. Greene, H. D. Davis and H. Perry, Executive Committee; A. Higgin, vice-president, Inter. Association of Fire Fighters.

The Legislative program, as submitted by the delegation, was as follows:—Eight-hour day; Old age pensions; Reduction in hours worked by probationary nurses to at least ten; Abolition of use of injunctions in industrial disputes; Two platoon system for fire fighters; Enactment of minimum wage legislation to cover male workers; Placing of beauty parlour operatives under the Minimum Wage Law; Regulations to govern all trade schools; Regulations to control the use of paint spraying machines; Compulsory liability insurance to be carried by auto owners to be administered by the government.

Alberta.—A delegation from the Alberta Federation of Labour waited on Premier Brownlee and his Cabinet and laid before them proposed legislation which had been endorsed by the federation at its last convention held in Calgary on November 22-24, 1926.

Among the delegation were: Fred. White, M.L.A., president of the federation; J. J. McCormack, vice-president; Alderman A. Farmillo, president of the Edmonton Trades and Labour Council; Angus Morrison of the United Mine Workers of America; P. M. Christopher, M.L.A.; Fred. Smeed and R. Livett.

The requests, as presented to the Government, are embodied in the convention proceedings of the Alberta Federation of Labour, which appeared in the issue of the LABOUR GAZETTE for December, 1926.

Premier Brownlee, in replying to the delegation, promised that the representations made would receive the earnest and searching consideration which they deserved.

Legislation Sought by Organized Catholic Workers

A delegation of the Federation of Catholic Workers of Canada waited recently on the Hon. L. A. Taschereau, Premier of Quebec, and members of his Cabinet, and placed before them the following requests:

Requesting the amendment of the Women's Minimum Wage Act, according to the memorandum submitted last year;

Requesting the holding up of the Workmen's Compensation Act until the act has been amended so as to be in conformity with the recommendations of the labour representatives on the commission appointed to inquire into the application of that act;*

Requesting the province to appoint a Superior Trades Council;

Requesting the amendment of the Disputes Conciliation Act so as to provide for a more disinterested board and to make clearer the clauses concerning the payment of costs of investigation;

Requesting that compulsory effect be given to the Compulsory Arbitration Act as regards municipalities and employees of their public services;

Requesting the appointment of a judge from the Superior Court to hear disputes between unions regularly incorporated under the Professional Unions Act† and their employers arising out of the execution of a contract or some other question under the said Act, and that such cases be given the priority in Court;

Requesting that car owners be compelled to take out accident insurance;

Requesting that a bonus of $25 be paid to poor families that will apply for it at the birth of each child after the fifth;

Requesting the Government to control and supervise the use of painting devices in order that the health of the workers may be protected;

Requesting the repealing of the tax for workers of the province in all parts of the province;

Requesting that steps be taken to put into effect in a general manner the Act relating to Sunday rest, particularly in bakeries;

Requesting the adoption of the eight hour day for women in industrial occupations;

Requesting the amendment of the Stationary Engineers' Act so as to be in conformity with the representations made by the convention last year;

Requesting the amendment of the Industrial Establishments' Act so as to provide for the stopping of machines during the noon hour in the textile industry;

Requesting that the Women's Minimum Wage Act be put into effect as soon as possible in the textile industry;

Requesting that inspectors of labour be instructed to conduct an inquiry on the conditions of labour in the lumber camps;

Requesting the government to abolish private employment offices that are not operating on a social basis;

*LABOUR GAZETTE, February, 1925, page 150.
†LABOUR GAZETTE, April, 1924, page 303.

Requesting that provincial employment officers offer work only at union wages;

Requesting that every city of 20,000 be requested to appoint a sanitary officer taken from experienced plumbers.

Requesting the necessary amendment of legislation so as to provide for the placing of a first-aid kit on all construction works.

NOTES ON LABOUR UNION ACTIVITIES

United Mine Workers of America, District 18

A special convention of the United Mine Workers of America, District 18, was held in Calgary, Alberta, on November 26, 1926. President R. Livett, in his address to the convention, reviewed the conditions in the district since the last special convention in May, and informed the delegates that not only was there an increase in membership but also a gain in the number of locals. In speaking of the southern part of the district, President Levitt stated that a number of miners at Coleman and Blairmore had signed up with the United Mine Workers of America, while others had withdrawn from the Canadian Miners Union, but as yet no locals of the International had been established. There was, however, a local formed at the Ideal Mine of Wayne, which it was stated, was preliminary to the complete organization of that particular field. The president stated that it was through the co-operation and assistance of Dai Morgan, ex-president of the Canadian Miners Union, that the establishing of the aforesaid local was made possible.

After a lengthy discussion, in which many of the delegates took part, a temporary policy for the district was decided upon, providing for the appointment of a District Secretary-treasurer and one board member for each sub-district. Mr. A. J. Morrison was appointed District Secretary-treasurer with offices at 408 Burns Building, Calgary, Alberta. There was a rearrangement of sub-districts and the delegates from each sub-district were allowed to choose a board member, which resulted as follows: Drumheller, Jas. Conroy; Wayne and Rosedale, J. E. Gordon; Edmonton and Brule, George Ungarian; The Northern Field, Thomas Hill; for Crow's Nest Pass, the delegate is to be appointed at a later date.

In thanking the convention for the co-operation and support he had received at the hands of the delegates, President Levitt urged every delegate, on his return home, to advocate the policies of the U.M.W. of A., believing it to be the only organization at the present time that can protect the interest of the miners in District 18.

Among the resolutions adopted were: (1) Instructing the District Officers to co-operate with any legitimate body organized for the purpose of increasing coal markets; (2) Permitting the District Officers to make a grant to the Public Relief Fund at Coleman for the relief of destitute miners at that place.

Amendments to Ontario Compensation Act to be sought

On December 14, 1926, there was held in Ottawa a conference of labour representatives called for the purpose of considering the matter of amendments to the Ontario Compensation Act. The meeting decided to appoint a committee to examine the act and report to a subsequent conference as to what amendments should be sought. The committee appointed was as follows: James Simpson, Toronto, vice-president of the Trades and Labour Congress of Canada; H. S. Mitchell, Hamilton, chairman of the Ontario executive committee of the Trades and Labour Congress; Wm. L. Best, Ottawa, legislative representative of the Brotherhood of Locomotive Firemen and Enginemen, and T. J. Coughlan, Ottawa, legislative representative of the Brotherhood of Railroad Trainmen, representing the railroad running trades. John Munro, Toronto, business agent of the International Association of Machinists, and John W. Bruce, Toronto, organizer for the United Association of Journeymen Plumbers. Mr. Best and Mr. Simpson were subsequently elected chairman and secretary respectively of the committee.

Another Labour Congress Proposed

As an outcome of a meeting of representatives of organizations unaffiliated with the American Federation of Labour or the Trades and Labour Congress of Canada it has been decided to call a convention for March 15, 1927, for the purpose of establishing an organization to be known as the All-Canadian Congress of Labour. A committee was appointed to draft a constitution to be submitted to the March convention.

Physicians Form Union

What is perhaps the first union of physicians in North America to be affiliated with the trade union movement has been formed in Chicago by more than 125 doctors employed in the city health department. The members of

the new union ask that their monthly rate of $100 be increased to $200 and that the city pay for the upkeep of the automobiles they use when calling upon city patients.

Labour Radio Station

On December 17, 1926, radio station WCFL, located on the municipal pier, Chicago, and owned by the Chicago Federation of Labour, was officially opened by the mayor of the city. The station maintains a radiogram service and is forwarding messages to Detroit, Cleveland, Buffalo, Columbus, Duluth and other cities.

Death of A. E. King

Mr. Albert Eugene King, general secretary and treasurer of the Brotherhood of Railroad Trainmen, died at Cleveland, Ohio, on November 28, 1926. He was born at Norwich, New York, and after his student days he entered the railway service, first as brakeman and later as baggageman. His connection with the Brotherhood dates from September 4, 1892, when he became a member of Parlor City Lodge, No. 36, located at Binghampton, New York. He was serving as treasurer of this local lodge, when, at the Toronto convention in May, 1897, he was elected to the Grand Lodge Office of which he was the incumbent at the time of his death, being elected at each recurring convention. In addition to serving the Brotherhood in this official capacity the late general secretary and treasurer was chairman of the General Grievance Committee of the Delaware, Lackawanna and Western Railroad System.

Injunction Against Canadian National Telegraphs

Mr. Justice Lennox, on December 22, on application of W. E. Easum and Henry Lynch, who acted on behalf of a number of commercial telegraphers employed by the Canadian National Telegraphs, granted an injunction which restrained the Canadian National Telegraphs until December 30 from negotiating with or entering into any agreement with C.M.C., C. McMahon or any officials of the Commercial Telegraphers' Union of America as claiming to represent the majority of the employees of the company. Mr. Lynch claimed that McMahon represents a minority of the telegraphers and that a committee of the majority has been discriminated against. The matter involved the formation or proposal of a Canadian union.

On December 31 Mr. Justice Grant refused a request for the further continuance of the injunction.

Mr. Chas. J. Lammert, who has filled the office of secretary-treasurer of the Brotherhood of Painters and Decorators for the past six years, died in Lafayette, Ind., last month. The funeral took place at his former home in St. Louis, Mo.

According to reports from local unions of the result of the election for officers of the United Mine Workers of America, held last month, John L. Lewis, president, Thomas Kennedy, secretary-treasurer, and other officials of the union have been re-elected.

John Fahy, one of the founders of the United Mine Workers of America, died suddenly last month in Columbus, Ohio. He was at one time president of District No. 9, and later served as statistician for the general organization.

Abstract of Labour Statistics of the United Kingdom

A new edition (the eighteenth) of the *Abstract of Labour Statistics* of the United Kingdom (Cmd. 2740) has been compiled by the Ministry of Labour and is now on sale. Before the war, the *Abstract* was published at intervals of approximately one year, but the present edition is the first to appear for nearly twelve years, publication having been suspended, after the issue of the seventeenth edition early in 1925, on grounds of economy. During the long period which has elapsed since the publication of that edition the need for a volume containing a summary of the principal statistics relating to labour had become increasingly apparent, and the present volume has accordingly been prepared.

The statistics are presented in 14 main sections, dealing respectively with Population; Employment, unemployment and unemployment insurance; Wages and hours of labour; Profit-sharing and labour co-partnership; Wholesale and retail prices and cost of living; Strikes and lock-outs; Industrial accidents and diseases and workmen's compensation; Trade unions, trades councils, and employers' associations; Co-operative societies, friendly societies and building societies; National health insurance; Old age pensions; Poor-law relief; Migration; Building plans approved.

The figures summarized are largely compiled from information collected by the Ministry of Labour; but summaries are also given of statistics relating to labour matters published by other government departments. In the case of serial tables the figures cover, so far as possible, the years 1910-1925.

DOMINION CIVIL SERVANTS DECIDE ON REPRESENTATIONS TO BE MADE TO THE GOVERNMENT

A CONFERENCE of Civil Service organizations, convened by the Civil Service Federation of Canada, was held in Ottawa on December 11 and 12, 1926, practically every association or body of Dominion Government employees being represented. In his opening address, Mr. T. R. L. MacInnes, president of the Federation, referred to the speech of the Prime Minister, the Right Honourable W. L. Mackenzie King, in Ottawa on September 11, 1926, and quoted extracts therefrom relative to superannuation, salary revision, the merit system and civil service councils. The president characterized the Prime Minister's pronouncement upon these subjects as "the most comprehensive and satisfactory enunciation of civil service policy ever made by a Canadian Prime Minister," and pointed out that the fulfilment of the assurances made would depend largely upon concerted and united effort by the service itself through its organizations.

The chief features of the conference were the discussions and the resolutions adopted concerning superannuation, civil service councils and salary revision. The decisions and recommendations of the conference on these matters are to be submitted to the Federal Government. In regard to the subject of superannuation the policy adopted by the conference thereto was as follows:—

1. The minimum return by way of benefits to each employee or his dependents should not in any case be less than the amount contributed by the employee and that benefits in event of death, ill health, voluntary retirement or retirement on account of marriage be determined on the same principles for periods of service under ten years, however short, as for periods of service over ten years.

2. That contributors who have been compelled to pay contributions on arrears on account of living allowance, and who are not in receipt of a living allowance when retired, to superannuation, shall receive the benefits of the extra contributions.

3. That as the imposition of interest at the rate of 4 per cent on arrears of contributions is a real hardship which in many cases makes the election to come under the act prohibitive, its removal is requested.

4. That if a widowed contributor dies while in receipt of superannuation allowance and leaves an unmarried daughter who has taken the mother's place in the household, a certain adequate allowance should be provided for her.

5. That the Act be amended to clearly provide that periods of prior service in the North West Mounted Police, Royal North West Mounted Police and Royal Canadian Mounted Police shall be deemed to be service under the Superannuation Act.

6. Periods of active service overseas on the military forces or active service in His Majesty's Naval Forces or any other Allies of His Majesty during the Great War to date of demobilization, shall be deemed service within the meaning of the Superannuation Act.

7. That in the event of the total period of service exceeding thirty-five years and the contributor electing to pay arrears to the full amount of the deficiency of the non-contributing period, such arrears shall be computed from the date of first appointment.

8. That Superannuation for temporary employees as provided in Parts 4 and 5 of the Act be clearly defined to include all those so-called temporary employees who are being or have been retained in the service by authority other than the six months' certificates from the Civil Service Commission and to include those paid at daily rates.

9. That the period during which a Civil Servant may elect to come under the Act shall be extended for a period of one year from the passing of the amending Act and contributors shall be permitted to alter the form of election.

10. That the permanent employees of the Public Works or other Departments who are paid a fixed yearly salary, based on prevailing rates, be permitted to contribute and to receive benefits under the Superannuation Act.

11. That the Act be so amended to provide that any contributor, who, on account of disability, is on leave of absence without pay, and who subsequently accepts superannuation, shall receive superannuation allowance based on the salary that would have been paid to such contributor had he been able to perform his duties.

12. That additional benefits or a reduction in contributions be made applicable to the women and unmarried men of the service, so that the benefits they enjoy under the Act may bear the same relation to their contributions as the benefits enjoyed by other employees bear to the contributions made by them.

13. That part 2, Section 16, be amended to read: The average salary of the last three years shall be taken as the basis on which the allowance shall be computed.

14. That the Act be amended to provide for the retirement of the employee at his option after thirty-five years' service.

15. In respect of periods of past services for which employees have not made any contribution or have not made the full contribution, they are required by the Act to contribute for the full period or not at all. This is a matter of great importance to men who have spent many years in the Outside Service. Many of those men who have been in the service twenty years or longer have found it impossible to pay back the abatements on the full half of the non-contributory period and have consequently been obliged to surrender credit for half their time of service.

We recommend that employees be given the right to contribute for any portion of such periods of service, the benefits to depend on the period for which contribution is made.

16. That the Act be amended to provide for the appointment of a Board to administer the Act and that the Civil Service have representation thereon.

Dealing with the question of civil service councils, the conference decided to approve the policy adopted by the Civil Service Federation of Canada at its last convention, held in October, 1926, and which was as follows:—

1. That this Federation in convention assembled should reiterate its stand in favour of the establishment of Civil Service Councils, composed of representatives of the Government and civil servants.

2. That as a preliminary step toward the establishment of such councils the Government be requested to appoint a committee to draft a constitution for a National Civil Service Council.

3. That the Government be requested to have the said committee composed of fourteen members, seven of whom are to be named on behalf of the Government and seven to be named as representing the various Civil Service organizations.

4. That the Government be requested to take action as expeditiously as possible after the aforementioned committee shall have reported.

5. Your committee further recommends that the functions of the Council should embrace the following:

(*a*) Consideration of the question of remuneration of classes common to the service.
(*b*) Provision of the best means of utliizing the ideas of the staff.
(*c*) Means for securing to the staff a greater share in the determination of the conditions under which their duties are carried out.
(*d*) Consideration of general principles governing conditions of service.
(*e*) Encouragement of the further education of civil servants.
(*f*) Improvement of office organization.
(*g*) Proposed legislation so far as it has a bearing on the Civil Service.

6. The Committee would suggest that the executive be instructed to prepare a memorandum on the matter of Civil Service Councils, to be circulated to all Civil Service organizations.

Discussion on the matter of salary revision concluded with the adoption of a resolution containing three recommendations. The resolution was agreed to by all representatives with the exception of those of the Professional Institute of the Civil Service of Canada who did not vote. The recommendations adopted were as follows:—

1. That a flat increase of $300 per annum, effective April 1, 1926, be given to all civil servants, thereby increasing the minimum and maximum of each class.

2. That the amount of bonus included in salary at the present time be deducted from the flat increase.

3. That in consideration of the great need for higher remuneration on account of increased duties or anomalies in classification, that this flat increase is not to prejudice the claims of the persons or groups concerned.

Prior to adjournment, the chairman stated that he understood it to be the feeling of the conference that the carrying out of the decisions reached and the submission of representations to the Government pursuant thereto, be left to the Civil Service Federation of Canada.

Civil Service Association of Alberta

The seventh annual convention of the Civil Service Association of Alberta was held in Edmonton, on November 26-27, 1926, forty-one delegates, from various points in the Province being present.

President J. W. Dodds reviewed the activities of the organization since its last convention. He stressed the fact that it was the aim of the association to make civil service work a real profession, and to do so, there must be (1) adequate remuneration; (2) recognition of the principle of promotion within the service; (3) competitive examination for entry into the service; (4) prescribed age limits for such entry.

The report of Secretary-Treasurer H. T. Sullivan showed that the total membership was 636, an increase of thirteen per cent during the year. The activities of the Alberta Civil Service Joint Council was reviewed in the report of Secretary G. W. Waistell, while the annual report of the Superannuation Board was presented by the Association's representative, P. N. Johnson.

A number of questions with reference to the service, which were under advisement by the convention, were answered by Hon. R. G. Reid, Provincial Treasurer, during the course of his address. Premier Brownlee, who was present at one of the sessions of the convention, gave an informal address, in which he asked for some suggestions which would enable him to have the contact with the employees which he required when vacancies or promotions were being considered.

Amendments were made to the constitution to provide (1) That the provincial executive shall have power to add one or more members to their number as found desirable; (2) That all grievances, presented in writing, shall be investigated by the local grievance committee and their finding sent to the provincial executive, if further action required.

Among the resolutions adopted were the following:

Recommending that a plebiscite be held on the question of affiliating with the Trades and Labour Congress of Canada, and that a two-third majority be required to decide;

Instructing the provincial executive to encourage the establishment of a joint commit-

tee on standardization, composed of government and association representatives, to deal with the matter of salaries, subsistence allowance, etc;

Recommending that appointments to positions in the civil service, except in the case of Deputy Ministers, shall be by competitive examination;

Recommending that a system be instituted whereby salary adjustments shall be dealt with immediately, when justly required;

Urging the government to place the proposed civil service bill before the legislature at the forthcoming session;

Recommending that all employees in provincial institutions be entitled to five days off in every calendar month;

Instructing the provincial executive to ask for an amendment to the superannuation act providing for an increase in the minimum annuity, which is at present $20 per month;

Urging the government to recognize the principle of salary increases based on efficiency ratings.

The officers elected were: President, G. W. Waistell; First vice-president, R. W. McWilliam; Second vice-president, A. C. McFayden; Secretary-Treasurer, H. T. Sullivan, Court House, Edmonton.

Women in the United States Government Service

Women's Bureau of the United States Department of Labour has issued a bulletin (No. 53) on the status of women in the service of the Federal Government. The Bulletin presents the results of an investigation of the records of recent appointments in the departmental service of executive establishments. All examinations for civil service appointments were opened to women in 1923, and the principle of "equal compensation for equal work irrespective of sex" was established in 1924. On this basis the "Personnel Classification Board" in 1924 defined the various positions in the service and determined the rates of pay for each position. The act which established the Board fixed the minimum salary for positions requiring "professional, scientific, or technical training equivalent to that represented by graduation from a college or university of recognized standing" at $1,860 per annum. The results of the study show, it is claimed, the beginners' chances and the actual possibilities of advancement for women in the executive establishments (which exclude the external service) in the District of Columbia.

Some of the facts brought out in the report are as follows:—

Almost one-half of the employees in the departmental service of the seven independent establishments and six departments whose records were reviewed in their entirety were women. A little more than one-third of all employees in these services received salaries of $1,860 and over per annum; 21 per cent of these receiving such salaries were women; 79 per cent were men.

Stated in terms of the total number of men and women reported, nearly one-sixth of the women and approximately one-half of the men employed in these establishments received $1,860 or more a year.

The beginning salary of clerks and typists usually is $1,140; the beginning salary of stenographers, $1,320. The highest salary paid to men or women in these positions was $2,700.

The beginning salary for all occupations classified in the scientific or professional service is $1,860. The highest salary received by a woman in this service (exclusive of the heads and assistant heads of scientific and professional bureaus) was $5,200; the highest received by a man was $6,000.

Measured by actual numbers who get beyond the $1,860 base line, stenographic and clerical positions offer opportunity for advancement in the departmental service to the larger number of women. Measured by the proportion who reach the base line and salary range beyond, the greater opportunities for women lie in professional and scientific fields.

In the positions paying $1,860 and over in which both women and men were employed the proportions of women were always greater in the lower salary groups and smaller in the higher salary groups than the proportions of men.

In all positions paying salaries of $1,860 and over in which women and men were employed, 45 per cent of the women employees, as compared with approximately 15 per cent of the men in like positions, received just $1,860 a year. Almost 40 per cent of the women employees and 24 per cent of the men employees received between $1,860 and $2,400. Fifteen per cent of the women and 61.5 per cent of the men were paid $2,400 or more per year.

In clerical occupations almost 53 per cent of the women with salaries of $1,860 and over, as compared with 31 per cent of the men received just $1,860.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Relation between Schools and Industry in Great Britain

THE need for co-operation between schools and industry is clearly indicated by the report of the Committee on Education and Industry appointed last year by the Minister of Education and the President of the Board of Education for England and Wales to study the relationship of education and industry. The first part of the report, issued in December, deals with juvenile employment and presents suggestions and recommendations of which the following are of interest to Canadians.

The existing provisions of section 107 of the Education Act, 1921, which give to local education authorities the power to make arrangements for advising juveniles and placing them in employment (hereafter termed "Choice of Employment") and in conjunction therewith to undertake the administration of Unemployment Insurance for juveniles, should be maintained.

The present system under which the responsibility for the administration of Choice of Employment and Unemployment Insurance for juveniles is shared by the Board of Education and the Ministry of Labour should be terminated and the Ministry should assume central responsibility for the two services.

The Ministry should leave local education authorities as far as possible to conduct and develop their Choice of Employment work on individual lines and in a manner consistent with their general educational policy.

Consideration should be given to the desirability of setting up a National Advisory Council for Juvenile Employment on which local education authorities should be strongly represented.

Steps should be taken to secure the closest possible co-operation between neighbouring areas in regard to the placing of juveniles in employment and to other aspects of Choice of Employment, and for this purpose juvenile employment committees and juvenile advisory committees responsible for neighbouring districts in a well-defined industrial area might institute some system of formal co-operation.

Local education authorities should make the fullest use of the labour clearing arrangements established by the Ministry and designed to facilitate the rapid and equitable absorption in employment of juveniles residing in neighbouring areas.

While it is too early to judge of the applicability to the ordinary work of choice of employment of psychological tests designed to determine the suitability of particular juveniles for particular employments, these tests should be encouraged, provided that skilled investigators are available.

Arrangements to meet the special needs of boys and girls from the secondary schools seeking employment should ordinarily be made by the Minister of Labour or the local education authority as the case may be. For this purpose they should have the assistance of representative head teachers of secondary schools.

The Ministry, or the local education authority, as the case may be, should consider the establishment of special arrangements in all areas where such arrangements are not already in force, for assisting mentally and physically defective juveniles to obtain suitable occupations.

There should be close co-operation between juvenile employment and juvenile advisory committees and local organizations concerned with the welfare of juveniles.

Steps should be taken to increase the volume of information as to industrial conditions which is available to school children or juveniles and to their parents.

The question of transferring juvenile labour from one area to another in order to secure more effective correlation of industrial supply and demand should be the subject of a special inquiry at an early date.

The Ministry and the local education authorities concerned should investigate the possibility of forming special classes for unemployed juveniles, if possible in the daytime, in existing educational institutions in those areas where no juvenile unemployment centre exists.

Wide discretion should continue to be given to local education authorities in regard to the organization of the centres and the choice of curriculum.

In view of the fact that the juveniles attending the centres are liable to leave at any time when employment offers, formal courses of vocational instruction should not be attempted in centres of the existing type, but the possibility of providing trade training for unemployed juveniles might be the subject of a Departmental inquiry.

Compulsory attendance at the day school after the statutory school-leaving age and pending employment should not be instituted, though voluntary attendance in these circumstances may be encouraged at the discretion of local education authorities.

The necessary legislation should be introduced as soon as possible to give effect to a scheme of working certificates, under which it would be a statutory obligation on employers before engaging juveniles, who are exempt from obligation to attend school and are below the age of entry into Unemployment Insurance, to require from them the

production of a working certificate issued by the Exchange or Bureau, or evidence that they possess such certificate, and a statutory obligation on every such juvenile seeking employment to attend a Juvenile Unemployment Centre or other approved course of instruction when required to do so, the issue, return, etc., of working certificates to be dealt with by regulations made under the Act.

Subject to the requisite financial safeguards, grants in aid of juvenile unemployment centres and the administration of the working certificate scheme should be such as to repay local education authorities for their approved expenditure on these services. Grants in aid of choice of employment work should be paid by the Ministry of Labour at the same rate as that at which they are now paid by the Board of Education.

The Ministry should undertake an inquiry into the subject of casual juvenile labour.

The Ministry should confer with industrial organizations and with local education authorities and juvenile advisory committees, so far as they are concerned, in regard to questions of retention of employment and should use their influence to secure the satisfactory absorption of juveniles in adult occupations.

Apprenticeship and Education

The following paragraphs form part of an address given by the State Supervisor of Apprenticeship before the Wisconsin Federation of Labour's Educational Conference held at Milwaukee in April last.

It cannot be said that we have a true understanding of apprenticeship until we consider it a form of education. Any other viewpoint is a distorted one. What else can it be? The same motive that prompts some to enter higher institutions of learning prompts other young men, less fortunately situated, to enter apprenticeship. That motive is nothing other than the prospect of increased earning ability. If that incentive were suddenly removed by some magic power, if those who never attended college were allowed the same earning capacity as those with a university degree, our universities would soon be emptied of 75 per cent of their students. The rest would remain for the cultural advantages gained by college attendance.

The sacrifices a young man makes in order that he may learn a trade are just as great, and often much greater, than others make who go through college. The student has his way well paved through school. Step by step he is carefully guided through the course. The city and state spend enormous sums to make it possible for those who can afford it to complete their education in the schools. But let the student drop his studies to become a worker and we turn our backs on him. From that moment on he must rely entirely on his own resources. In the industries he finds that no one has organized a course of instruction for him. If in time he finds his way to the top he has no one to thank but himself. Perhaps those conditions exist because of the impression that there is less to learn in the industries than there is in school. But is that true? It might have been one time, but not so at present.

Only a few years ago one went to college with the intention of entering the professions. To-day, when you walk through almost any manufacturing plant, men in overalls with greasy hands and faces will be pointed out to you with the explanation that they are college graduates learning the game from the bottom up. One concern in this state alone employs around seventy-five such men as special apprentices. They are not there because the professions are overcrowded, but because they see a promising future in the industries. There is some significance attached to the fact that so many college men are now to be found in the shops. It means that there is a change going on in the industries. Men in executive positions to-day must have a far wider range of knowledge than was the case only ten or fifteen years ago. New sciences and new methods are being introduced that were undreamed of a few short years ago. I can see the effect of this change gradually reaching down to the mechanic himself. Men with the combination of brains and skill are going to be more and more in demand as the time passes. Even among the apprentices it is to be noted that a far greater percentage of high school graduates are entering the trades than there were only a half dozen years ago. Employers want them. In other words, the trend is upward. All indications point to an awakening of the fact that in the industries there is a vast amount of technical and other knowledge to be gained in order to succeed. This mass of knowledge is still in a chaotic state as compared to the orderly and well-planned curricula of our schools. In most industries the idea still prevails that the young man entering them as a life's work must rely on himself alone to learn the business. If he has the right stuff in him he will succeed, and if not he will remain at the bottom. Because of that theory, the theory that he must leave all guidance and encouragement behind him when he leaves school, many remain at the bottom, to the detriment of the industry.

It is easy to see why college men are now being so warmly welcomed into manufacturing

establishments. It is to offset, in a way, the results of the lack of foresight in training their own employees. Trained men can not be developed without a training program. Some men will succeed solely on their own initiative just as some men have become great engineers without ever attending college. But the results are unsatisfactory as applied to the average man. What a joke our schools would be if pupils, after becoming thoroughly versed in the lesson assigned them, had to argue with the teacher and threaten to quit school before being allowed to proceed with the next lesson. But isn't that exactly what is going on in many places of employment where minors enter with the understanding that there they may learn a trade or business? The answer some might have for that is that our schools exist solely for the purpose of teaching and that they are not interested in the production of things. That is not an answer to the question. Training and production cannot be separated. Apprenticeship is no less important to a trade than are the tools used. The employer or the industry with the best training program is the one that will be most successful. It is nothing more than a matter of dollars and cents. It is money in the pocket of the workman, the consumer, and the employer. All benefit by it.

Vocational Day Schools in South Africa

Regulations enabling the Minister of Education to make grants to vocational day schools under the Higher Education Act of 1923 have recently been passed. Under these regulations the Minister of Education may authorize a council constituted under the Act to conduct a school or schools, intended for pupils between the ages of fourteen and eighteen, whose curriculum is framed with special reference to their probable future occupations in industry, commerce, housecraft, or needlecraft. The curriculum and the conditions of admission to the school must be approved by the secretary for education. Grants made to such schools are not to be more than £16 and not less than £5 for each pupil in average attendance during the calendar year next preceding the commencement of the financial year in which such grant is paid, provided that in the first year of the grant the Minister may determine on what number of pupils it shall be computed. The rate of the school grant is to be determined by the Minister after consideration of the nature of the course and the efficiency of the instruction. In determining the average attendance for the purpose of the school grant, no pupil will be included after the end of the school term or vacation in which he attains the age of eighteen years or whose age is less than fourteen years, or who has not satisfied the conditions for exemption from compulsory attendance operative in the area in which the school is situated.

Among other provisions, the regulations stipulate that the school year in respect of which grant is made must include not less than 1,000 hours of instruction, except that a lower number of hours may be approved for a school of domestic science. The minister may award bursaries providing free tuition, but the number of such bursaries shall not, except with the consent of the Treasury, at any time exceed one-fourth of the whole number of pupils in respect of whom the school grant is paid. The minister may award boarding bursaries not exceeding in each case £30 per annum to pupils who would otherwise be prevented by distance from attending the school, and may also award transport bursaries to pupils whose residence is more than four miles from the school.

C.P.R. Scholarships

Two free scholarships at McGill University are being offered by the Canadian Pacific Railway, each scholarship being for one year's tuition in the Faculty of Arts and four years' tuition in architecture, chemical, civil, mechanical or electrical engineering. The scholarships are offered by the company, subject to competitive examination to apprentices and other employees enrolled on the permanent staff of the company and under 21 years of age and also to minor sons of employees. Scholarships will be renewed from year to year to cover a period not exceeding five years if at the close of each session the holder is entitled under the rules to full standing in the next higher year. Where a scholarship holder finds it necessary to interrupt his course for a year or longer, notice must be given at the close of the session to the railway company and to the Registrar of McGill in order that the scholarship may be open to other applicants.

Mr. J. M. Grieve, Superintendent of Sleeping, Dining and Parlour Car Department, Toronto, has been appointed as one of the members representing the railways on the Canadian National Railways Employees' Board of Adjustment No. 2, in succession to Mr. W. A. Kirkpatrick, Saskatoon.

EDUCATIONAL WORK OF LADIES' GARMENT WORKERS' UNION

THE International Ladies' Garment Workers' Union has given increased attention during recent years to the subject of education. In its early stages "workers' education" was intended merely to qualify members of the union for taking part in propaganda work, and it was therefore comparatively superficial in its character. However, at the convention held at Cleveland in 1914 the union adopted a more liberal policy, declaring that the time had come "to dwell particularly upon the more solid and preparatory work of education," and a committee was appointed to draw up an educational plan. The Education Committee, from the outset, emphasized the part which Workers' Education ought to play in developing intelligent, well-informed leaders within the union. Their policy was based on the opinion that "the members of any union have a right to expect that their officers be fully acquainted not only with the problems of their own organization, but with social, industrial and labour problems in general. Indeed, they have always insisted that the workers' classroom should be a kind of clearing-house where the worker could bring his problems for discussion, where he might learn more about the aims and policies of his own industry, and where he might familiarize himself with some of the more outstanding aspects of modern civilization. To this end they have consistently maintained that Workers' Education should not only be controlled by the unions but it should instill in the worker a strong sense of loyalty for his or her organization and desire for constructive leadership."

Following these principles the Union in 1918 adopted an educational plan which aimed, first, to enlighten the members on general labour questions and on "the functions, aims, possibilities and limitations of a trade organization." and, secondly, to train the ablest men and women of the organization for duties as officers. A general education committee was named, the international board was authorized to appoint a director of education, and all local unions were recommended to organize local educational committees. A recent bulletin published by the Educational Department of the union describes its activities as follows:—

1. *Unity Centres.*—The Unity Centres are evening classes organized exclusively for members of the International. These classes are conducted in public evening schools in the City of New York. In each Unity Centre there are two kinds of instruction. The first is English. The teachers are assigned by the Board of Education. The second consists of classes in the history of the labour movement, social sciences, applied psychology, physical training.

2. *Workers' University.*—The Workers' University consists of classes of advanced intruction on labour, cultural subjects and social sciences. Those who attend these classes have had preliminary training in the Unit Centres or elsewhere.

3. *Exetension Division.*—During the past years, the union has extended its educational facilities to those members who cannot attend regular classes, by offering them courses and individual lectures at local meetings, in local offices and wherever they could be found in organized groups. It is intended to spend much effort in developing these so-called extension activities, in addition to the regular classes, as in this way many more workers can be made better informed trade unionists.

(*a*) Courses for groups of members are given in offices of local unions, where members meet for organization purposes.

(*b*) Lectures and talks are given at business meetings of local unions. Members attend these meetings, and listen to the lectures before beginning the business of the evening.

Both the courses and lectures are given in the language best understood by the group—English, Yiddish, Russian or Italian.

(*c*) The Educational Department also arranges social activities. Weekly musical and social gatherings for members and their families are held in different sections. Group singing is a feature at these events. Prominent speakers address the audience on social and labour problems. Excursions, hikes, visits to museums, etc., for members of the Union and their friends, are also arrangeed.

During many strikes conducted by the International Union, the Educational Department co-operates with the speakers and entertainment committees in providing proper recreational and educational activities for the strikers, such as lectures, concerts, and exhibitions of motion pictures. By means of printed literature the attention of the strikers is called to the opportunities offered by the union's educational department. Educational activities are conducted for members in various cities, under the general direction of the Educational Department. In Boston and Philadelphia special arrangements are made with the local labour colleges for the education of the members there. The Educational Department makes special arrangements by which tickets to musical and dramatic performances

are sold to members of the International Ladies' Garment Workers' Union at reduced prices. It also assists members in selecting books which are furnished to them at minimum prices.

4. *Students' Councils.*—Each class elects two members to serve on a Students' Council. This Council aids the Educational Department to keep in touch with classes, and selects three of its number to sit with the Executive Committee of the Faculty. They express the wishes and sentiments of their fellow students in the choice of subjects, etc.

EMPLOYEES' BONUS AND BENEFIT SCHEMES

BONUSES were given by a large number of employers to their workpeople during the past Christmas season. A few recent employees' benefit schemes are noted in the following paragraphs:—

Canadian General Electric Company

The Canadian General Electric Company lately announced the inauguration at the New Year of a scheme to enable their employees to purchase cumulative preference stock of the company at par value. The stock will be sold at $50 a share, the current quotation in the market being $57. The offer is open until March 15. The dividend is 7 per cent per annum, cumulative, and is payable on the first days of January, April, July and October. In addition to this dividend a bonus of one per cent on par value of the shares acquired under this plan will be made by the company yearly. This is not an extra dividend, or part of the dividend, the manager states, but is a special bonus to encourage saving and investment. The payment may be greater than the one per cent if the earnings of the company permit.

Any employee who has been in continuous service since December 31, 1926, is eligible to purchase stock to the amount of one to twenty shares, each at the par value of $50. The purchase price is payable four dollars a share per month, or one dollar a week, to be withheld from the employees' salaries or wages, or the employe may make payment in cash in full for the shares applied for, remitting before April 1. Dividends on the stock will be applied toward payment until such time as the shares are fully paid for, and in addition, as soon in 1928 as possible, the extra payment of one per cent, or more, will be credited to the employee's acount for payment on the stock, or paid direct to the employee if his stock is fully paid for. Interest at the rate of 5 per cent per anuum will be charged on unpaid balances.

In the event of the employment of an employee terminating, the total amount paid in for stock under this plan will be refunded, plus interest at the rate of 5 per cent per annum, but no allowances will be made for accrued dividends or for the credit of extra payment, and no interest will be charged on unpaid balances. In case of death, the total amount paid in by the employee by means of deductions from pay, accrued dividends, and the pro-rata proportion of the extra payment credit, less interest at 5 per cent per annum on unpaid balances, will be paid to the estate of the deceased employee. Any employee may withdraw from the purchase agreement at any time, and in case of withdrawal refund will be made on the same basis as if employment had terminated.

Any employee may at any time turn the shares back to the trustees at par, plus unpaid accrued dividends at the rate of 7 per cent per annum, and the trustees will make payment for these shares within sixty days.

Keasby and Mattison Company

The Keasbey and Mattison Company, employing about 400 workpeople in connection with the Bell Asbestos Mine, Thetford Mines, allowed their employees Christmas bonuses of $10, $20, $25, and $50, according to service.

Kroehler Manufacturing Company

The Kroehler Manufacturing Company, Limited, of Stratford, Ontario, distributed $75,000 to its employees at Christmas. This company has eight factories, employing about 3,000 workpeople.

Intercolonial Coal Company

The Intercolonial Coal Company, Westville, Nova Scotia, distributed $3,000 among its 600 employees at Christmas. For some weeks a production bonus also has been given to the company's employees, based on a percentage on production over 20,000 tons a month.

Firth Brothers Profit Sharing Plan

Firth Brothers, Limited, a tailoring company of Ontario with headquarters at Hamilton, employing 175 skilled workers, instituted a system of profit sharing on January 1. It

is described as a wholly voluntary plan of mutual co-operation and benefit, whereby all employees, from the lowest to the highest grades, will share in the firm's profits at the end of each year, without being required to make contributions towards any fund. The object of the plan is "to give the employees a direct, personal interest in the business in order that they may of their own volition promote increased efficiency, eliminate needless waste and increase production while reducing the cost."

Consolidated Mining and Smelting Company of Canada

The Consolidated Mining and Smelting Company of Canada allowed Christmas bonuses to its employees ranging from $12.50 for single employees of six months' standing to $50 for married employees of one year's standing. The company has 4,000 employees at Tadanac, Trail, Rossland, Kimberley, Moyle, Ainsworth, the boundary country and on Vancouver Island. The majority are eligible for one of the major bonuses.

J. Kayser Company

Employees of over five years' standing received at Christmas from the Julius Kayser Company, Sherbrooke, Quebec, cheques varying from $2 to $1,200, according to the number of years in the employ of the company, out of a fund of $15,000 which had accumulated from the profit-sharing plan inaugurated in 1917. The distribution of the fund was due to the fact that the plan had not proved satisfactory after nine years of operation, and that it was decided to discontinue it.

Bonus for Royal Bank of Canada Employees

Nine thousand employees of the Royal Bank of Canada, comprising the staff all over the Dominion of Canada and abroad, benefitted during the Christmas season by the distribution of a bonus in the form of an extra half month's salary.

Group Life Insurance for General Motors Employees

Group life insurance exceeding $100,000,000 was taken out recently by General Motors Corporation with the Metropolitan Life Insurance Company for more than 100,000 employees who have been on the payroll three months or longer. The policy covers each worker for $1,000 without medical examination. All new employees will become eligible after serving three months. The plan is co-operative, both employees and corporation sharing the cost, but in order to get the plan installed promptly, General Motors is paying the entire cost for the month of December. The insurance is payable at death to the beneficiary designated by the employee, or should an employee be totally and permanently disabled before he is 60 years old, the amount will be paid to him in 20 instalments of $51.05 a month after a three months' waiting period. The policy is one of the largest for group life insurance ever issued.

General Motors has plants in 36 cities in the United States and in Canada, and seventeen in oversea countries.

American Telephone and Telegraph Employees' Stock

Through the purchase of stock on a special plan, American Telephone and Telegraph Company employees are now contributing about $2,500,000 monthly in new capital to the company. In December more than 200,000 employees were paying for stock in the company compared with about 160,000 a few months ago. When the increase in price was announced, there was a rush of subscriptions. As a result, the number of shares under subscription now stands at around 830,000 compared with 690,000 as of September 1. Subscriptions are payable at the rate of $3 per month per share, which means that subscriptions for the 830,000 shares are being paid at the rate of about $2,490,000 monthly. The price of $107,900,000 which employees now subscribing for stock will have paid for their holdings if they continue at the present rate compares favourably with the $124,500,000 they would have had to pay for the stock at current prices of $150.

American Telephone and Telegraph Company employees with six months of service may subscribe to stock at the rate of one share per $300 of salary earned annually. Maximum purchases allowed are fifty shares. It requires about three years to pay for the stock and payments may not be made in advance of instalment dates.

Stock Dividends for United States Steel Corporation Employees

Approximately 60,000 employees of the United States Steel Corporation—representing for the most part the rank and file of the organization—will receive nearly $25,000,000 by the 40 per cent stock dividend of the corporation recently recommended by the board of directors. According to the latest available estimate, employee stockholders in the Steel Corporation numbered about 60,000,

and the common stock held in their names amounted to approximately 507,000 shares. These stock holdings, with a par value of approximately $50,700,000, will participate on a pro rata basis in the 40 per cent stock dividend.

At the end of 1925 employees of the Steel Corporation held 501,999 shares of $100 par common stock, and 163,802 shares of $100 par preferred stock, making a total of 665,801 shares. The offering of common stock is usually made about the middle of January. On January 14, last year, the corporation notified employees that they could subscribe to 100,000 shares, and it was presumed that an offer closely approximating this would be made this year.

Philadelphia Rapid Transit

The Philadelphia Rapid Transit Co-operative Wage Fund trustees purchased in 1926, 25,000 shares of P.R.T. stock at about $42 a share after crediting dividends received thereon and paying four quarterly dividends aggregating 12 per cent. This brings the total P.R.T. stock in possession of the company operative wage fund to 221,500 shares, which, added to the 10,000 shares owned by co-operative association, gives P.R.T. employees ownership of more than one-third of the total capital.

S. W. Straus and Company, New York

Employees who have been with S. W. Straus and Company for ten years received on December 29, 1926, thrift society bonuses amounting to approximately 400 per cent of the money saved by them in the decade.

The thrift society, formed in 1916, allows employees to deposit with the company amounts equal to 5 per cent of their salaries, if deposits do not exceed $250 a year. For each dollar saved by an employee the company deposited a similar amount or more. No division could be made until an employee had been a depositor for ten years. Persons leaving the service of the company could withdraw all their deposits with interest, but the amounts deposited by the company remained in the treasury for the benefit of the remaining depositors. Employees who deposited $250 a year for ten years received cheques for a little more than $10,000 each.

The usual bonuses of the welfare and profit-sharing plans were paid at the end of the year.

Garden Cities for Railway Employees in France

The Northern Railway of France has recently built a number of garden cities to house its employees. This enterprise is described by B. S. Townroe in the *American Review of Reviews*, September, 1926. Altogether this railway has constructed 11,141 houses, 33 schools for boys and girls, 19 domestic economy and 9 technical schools, 18 buildings where there are baths and showers, 24 dispensaries including infant-welfare centers, 25 recreation halls, and 30 sport grounds, and there is a central library in each city. The workingmen themselves govern these cities through local councils in which there is a representative for every 50 inhabitants, the railroad company, however, reserving the right to place three officials on each council. The city of Tegnier which was left in ruins by the war, has been rebuilt and now has 1,300 houses mostly of concrete or brick. The usual type consists of living room, three bedrooms (one for the parents, one for the girls, and a third for the boys), cellar, porch and garden. Local materials have been used in the construction. The average cost was about 26,000 francs, or around $650 at the rate of exchange prevailing when the survey was made, but in the neighbourhood of larger towns the heavy expenses of drainage, lighting, and road-building considerably increased the cost. The death rate of children at Tegnier was said to be far below that of some of the neighbouring towns.

Production at Sullivan Mine

The *Canadian Mining Journal* in its issue of December 31, 1926, contains an account of the Sullivan mine of the Consolidated Mining and Smelting Company of Canada, Limited. The Sullivan mine is situated at Kimberley, British Columbia, nineteen miles from Cranbrook, a divisional point on the Crow's Nest Pass branch of the Canadian Pacific Railway. Production started on a small scale in 1900, and in 1914 the mine became the largest lead producer in Canada. In 1925 it was the largest single producer of lead and zinc in the world. Since operations commenced 4,800,000 tons of ore have been produced from stopes and 170,000 tons from development. At the present time, ore is being mined at the rate of 1,100,000 tons per year, with a yield of about 200,000 pounds of lead, 110,000 pounds of zinc and 4,000,00 ounces of silver.

ASSOCIATION OF CANADIAN BUILDING AND CONSTRUCTION INDUSTRIES

Ninth Annual Convention, Ottawa, January 11-13, 1926

THE Ninth Annual Convention of the Association of Canadian Building and Construction Industries was held at Ottawa this year, on January 11-13. Representative men from all parts of Canada were in attendance.

At the opening luncheon, greetings to the Convention were presented by Controller Charles Tulley representing the City of Ottawa in the absence of Mayor John P. Balharrie, by Mayor Theo. Lambert representing the City of Hull; by E. R. E. Chevrier, M.P., for the Federal Government; and by Mr. José A. Machado, President-elect, for the Board of Trade. A stimulating address on "Ethics in Construction" was given by Police Magistrate Charles Hopewell, of Ottawa.

The business session on Tuesday was devoted to a series of reports by members of the Executive Committee, in which the work of the past year was reviewed. E. G. M. Cape of Montreal dealt with Codes of Ethics and Standard Contracts; Harry J. Mero of Walkerville discussed the progress attained in launching a scheme of Apprentice Training; George Oakley, Toronto, described the Construction Building at the Canadian National Exhibition; and Frank E. Waterman, Toronto, and J. P. Russell, Toronto, reported for the official association paper the *Contract Record*. Some problems of branch membership relations were dealt with by John N. Flood, St. John, N.B.

The speaker at the second luncheon, Wednesday, January 12, was R. B. Morley, general manager of the Industrial Accident Prevention Associations, Toronto. By interesting comparisons, Mr. Morley showed how a proper campaign for accident prevention in an industry would tend to reduce the accidents, and consequently lower the cost of Workmen's Compensation. Mr. Morley's address is given on page 66 of this issue.

In the business session on Wednesday afternoon, the Western Vice-President, H. J. Bird, described progress which had been made in the middle West of Canada in extending the scope of construction work during the winter. W. C. Clark, the head of the Economics Department of S. W. Straus & Company, taking for his subject "Financing the Building Industry," described the newer methods of construction finance by mortgage bonds, and the dangers that required protection. His talk was followed by discussion arising out of the numerous questions asked him.

At the luncheon on the third day, Thursday, January 13, the Hon. Senator Charles Murphy described the work being done to beautify the Capital of Canada. Among the guests present were the members of the Ottawa Improvement Commission and the Minister of Public Works, Hon. J. C. Elliott.

The final business session included two interesting talks by W. H. C. Mussen of Montreal and H. H. Vaughan, President of the Canadian Engineering Standards Association, on "Standardizing Construction Equipment and Materials." F. A. R. Hoffeditz, of York, Pennsylvania, described the system that has been evolved there of co-operation between the public schools and industrial plans to provide a practical training for boys in the shop trades. H. P. Frid, Hamilton, dealt with "Business and Labour Relations in 1926" and stressed the discussions which had been held in meetings of the General Contractors' Section.

Reports from the different construction centres in Canada by the delegates present at the Convention would seem to indicate a greater feeling of optimism than for some years past. While there has been no outstanding revival of activity in building construction, the increased totals have represented much of the heavy type of development work which will ultimately mean greater facilities for transportation and business. There seems to be little, if any, housing shortage, though the recent rapid growth in large apartment houses has created new conditions.

Invitations for the 1928 Convention were received from Montreal, Windsor, Quebec, Hamilton, Saskatoon and Winnipeg. After full discussion, representatives from the other centres withdrew their claims in favour of Winnipeg.

The officers elected for 1927 were:—President, C. Blake Jackson, Toronto; Immediate Past President, John V. Gray, Toronto; Vice-President, Harry J. Mero, Walkerville; Eastern Vice-President, E. G. M. Cape, Montreal; Western Vice-President, E. Claydon, Winnipeg; Honorary Secretary, Joseph F. Meagher, Ottawa; Honorary Treasurer, Frank E. Waterman, Toronto; Representative of Trade Contractors Section, George Oakley, Toronto; Representative of Manufacturing and Supply Section, H. J. Stambaugh; Representative of General Contractors Section, H. P. Frid, Hamilton.

32771—5½

HOW TO PREVENT ACCIDENTS IN CONSTRUCTION WORK IN CANADA

Address Delivered by R. B. Morley, General Manager, Industrial Accident Prevention Associations, at the Meeting of the Association of Canadian Building and Construction Industries at Ottawa, January 12, 1927

LAST year there were 65,916 accidents reported to the Ontario Workmen's Compensation Board, including 400 fatalities. In the same year the Compensation Board awarded a total of $5,821,351.90 and medical aid cost $988,486.70, which is included in the immediately preceding figure and amounts to slightly over 21 per cent of the benefits awarded by the Board in Schedule 1. The Workmen's Compensation Act has been in effect in this Province for twelve years and in that time there have been 567,930 accidents reported, including 4,728 fatalities, an average of nearly 400 fatalities in every year. In twelve years the Board has awarded the enormous sum of $57,324,016.35 for injuries received in employment.

Construction

According to *MacLean's Building Reports,* your industry had a prosperous year in 1926 and contributed in no small way to the general improvement in the condition of Canada. There was an increase of $75,000,000, or 25 per cent, in the total value of contracts awarded for the whole Dominion in 1926 over 1925, so I am not talking to men whose industry is steadily declining in volume, as 1926 showed a greater money value in contracts than in any year since the high points of 1912 and 1913.

One of the items of cost in connection with your work of necessity is compensation. Most of the provinces of Canada now have compensation acts and our good friends across the river in Quebec have a new Act coming into effect on the first of April of this year. If your accident experience is bad you know that you will have to pay a high rate and, under compensation as we have it in Canada, good experience means a low rate for industry.

Workmen's Compensation

We all know the development of compensation, how the idea was fought at the outset, how the first accident insurance bill was introduced in Germany in 1885 and followed by somewhat similar laws in other countries including Great Britain in 1897. We know that the first effective state law on this continent came into being in New Jersey in 1911 and that under compensation the workers' position has steadily improved. It is a fact that industry has only one relief from increasing compensation costs and that is accident prevention.

In Ontario the Compensation Act provides that an injured worker shall be paid 66⅔ per cent of his average earnings up to $2,000 per annum, provided the injury was responsible for his being away from work for seven days or more. Compensation Acts throughout Canada have followed the same general plan as the Ontario Act, although the benefits in some cases vary to a considerable extent. The Ontario Act provides for unlimited medical aid hospital attendance and practically the same plan is followed in all of the other provinces at present operating under compensation acts. Compensation in the event of death or serious disablement is usually provided in the form of pensions.

It is a fact that a certain amount of misgiving was felt when the Ontario Act was first drafted by the late Chief Justice, Sir William Meredith, but twelve years' experience has shown that a compensation act administered by a competent board such as we have had in Ontario has many advantages over the old system and has rid industry of litigation in dealing with accidents to workers and made for promptness the certainty of payment without unduly burdening the employer.

How Compensation is Collected

Workmen's Compensation Boards in Canada collect the money to pay for accident costs from industry, this being done under the authority of the Act and the basis of collection is the rate of assessment. Of necessity rates of assessment vary according to the hazard and experience of the different lines of industry. For this reason it has been necessary to establish different classes under the various compensation laws, and the industries in any one class pay all of the costs of the accidents in that class. Rates of assessment in Ontario vary from 10 cents to $10 per $100 of payroll, and for the past several years the Board in this Province has had to find approximately $6,000,000 per annum to pay for accidents in industry coming under the various lines of compensation.

The experience of the Ontario Board shows that death cases are slightly less than 1 per cent of the total number reported to the Board, and cost approximately 25 per cent of

the total compensation. Permanent partial and permanent total disability cases run about 4 per cent of the number of accidents reported and cost about 50 per cent of the total compensation, which means that about 5 per cent of the total number of accidents reported to the Board cost 75 per cent of the compensation and that the other 95 per cent of the accidents reported cost only 25 per cent of the total compensation awarded. For this reason it is more than interesting to note that the figures published by the Board from year to year show a slight decrease in the cost of the serious accidents which include death cases and permanent disabilities.

Class 24

The construction class in Ontario is now known as Class 24 and in your class are nearly 10,000 employers with an annual payroll of about $34,000,000. This means roughly 40 per cent of the total number of industries under compensation and nearly 10 per cent of the total payroll. Your class is one of the most diversified under compensation and you have a wide variety of problems. Class 24 is divided by the Workmen's Compensation Board into ten groups and the rates of assessment vary from 30 cents to $8 per $100 of pay-roll. In the past several years, 1920 to 1925 inclusive, the total amount for compensation and medical aid paid by the Board in Class 24 has exceeded the assessments paid by employers by $253,000. I have not the figures for the year 1926 as that year is not yet closed by the Board.

Your industry and the steel plants might bear some comparison. The steel plant offers heavy dirty work with large weights, the strain of long hours and at times intensive heat. The rate of assessment as adjusted for 1925, the last year on which we have final figures, was $1 per $100 of pay-roll in the steel industry. The adjusted rate in your class for lathing and plastering was $1, for ordinary carpentry $1.20 and for general construction work the same. Is that good enough? The answer is "No." What are you going to do about it?

Building Trade Problems

What are your problems? You must review carefully all your projects in the formative stage to see that safety is included. One of the kings of Babylon who reigned about 2200 B.C. laid down a safety rule to this effect, "If a builder build a house and do not make its construction firm, that builder shall be put to death." You, as builders, have an enormous responsibility—a responsibility to the public, to the individual or company supplying the money, to your workers, and to yourself in this matter of safety. Safety must be built into your buildings and into your workers. You have, of course, the problem of the seasonal worker, and I remember the manager of a plant telling me that when he had taken on additional help his accident curve jumped upward suddenly. He called his foremen together and told them that the organization should be good enough to expand and still keep the accident record down, and they are doing it. You can see that your equipment in adequate and you can have all equipment inspected periodically. You can insist on foremen doing their jobs properly and likewise insist on the foremen educating the workers in safety. So far as accident prevention goes, it does not matter whether you are paying a high rate or a low one, there is always an argument for more accident prevention. If your rate is high, you want safety on the job to get it down, and if your rate is low you want safety on the job to keep it at that point or get it lower if possible.

Accident Prevention

The provinces of Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia provide in their compensation acts for accident prevention work. In Nova Scotia, New Brunswick and Ontario a section of the act authorizes the employers under compensation to set up accident prevention organizations, and it is under this section of the Act that the Industrial Accident Prevention Associations carry on a campaign in fifteen of the twenty-four classes of industry in Schedule 1 in the province of Ontario. The Associations represent about 7,500 employers out of a total of 25,000, and these 7,500 industries have a pay-roll of over two-thirds of the total pay-roll in Schedule 1. The organization exists for accident prevention purposes and is established with the consent of the Board and under the authority of Section 101 of the Act. We have a group of trained inspectors whose duties take them into the plants included in our membership, for accident prevention purposes only. We issue every month a memorandum for industry and with it bulletins intended for posting in the various industries. We check those plants which have too many accidents and carry on a practical day by day campaign against accidents the year round. The Chairman of the Workmen's Compensation Board made the statement that the experience of the classes included in the accident prevention associations

was better than in the unorganized classes. This, of course, is only reasonable, as it would mean that the money was being spent to no advantage unless this were so. The directors of the Accident Prevention Associations are elected each year at the annual meeting by all of the employers in the class and each of the classes set up under Section 101 of our Ontario Act has its own group of directors who deal specifically with the problems of their class.

As I see it, the construction industries need an accident prevention organization to carry on the idea of accident prevention work and to endeavour to secure for you a lower rate. It would seem advisable to place in the hands of every member of Class 24 each month a letter relating to accident prevention, compensation costs and other kindred matters and to distribute with that letter, so that the man on the job might be educated, bulletins suitable to your own line of industry. In addition to this, you require an organization that would function every day in the year on this one problem and that would check those employers who are having too many accidents.

Lately I was somewhat appalled to be told of the experience of a large builder in Toronto and to hear of the very high frequency rate for accidents involving the loss of seven days' time or more. All of you will remember that years ago it was considered reasonable in erecting large buildings that one man should die for every floor put up. That day has gone. Conditions have improved. Conditions can be further improved. There is not only the compensation cost to be paid in the event of an accident but the cost of training a new man to take on the work in many cases.

Education of the Worker

You have to deal with a very high percentage of non-mechanical accidents. In the classes included in the Industrial Accident Prevention Associations there are many mechanical accidents, but the mechanical hazard is gradually lessening, as the reports from the Workmen's Compensation Board show. Handling material, nail punctures, slipping and tripping and injuries by falling materials must apparently continue to be your four chief problems in accident prevention. These involve the education of the worker and that education cannot start at the bottom and work upwards. The first thing that must be done to secure effective accident prevention in any industry is that the executives must be convinced of the need for this and the Industrial Accident Prevention Associations have been particularly fortunate in carrying on this phase of the work. Having interested the executives, there are certain other steps that are necessary, as actually the employer can do more than anyone else concerned among his workers. The employer can select his staff carefully, can provide mechanical safeguards, can insist on good housekeeping and can see that all reports to the Workmen's Compensation Board give the full details of the accident, omitting nothing that may have the slightest bearing on the whole situation. Safety pays big dividends. Take, for instance, the problem of the board with the nail in it. The average carpenter on the job would sooner take a new piece of lumber than take the trouble to knock out the nails from another board. A member of your organization told me not long ago that he was actually saving money by having a man take nails out of boards on the job, and this saving was without any thought of the accidents which were avoided.

Suggested Remedies

The remedies suggested for the accident situation in your industry are: first, the formation of accident prevention associations in those provinces where such have not been set up. Following this, it is necessary to interest the individual employers and when they have become interested there are four steps:

(*a*) the protection of the known hazards of your industry;

(*b*) intelligent supervision throughout the whole job and reaching every employee;

(*c*) safety education for all ranks; and

(*d*) good housekeeping.

An accident prevention association set up under the authority of, say, Section 101 of the Workmen's Compensation Act (Ontario) of necessity includes all of the employers in the class or group organized. This means that the large and small employers pay, according to their payroll, their share of the costs of the association and that the load is distributed equally on everybody. Every employer gets exactly the same kind of treatment. Generally speaking, we believe from our experience that the larger employer is carrying the bulk of the load under compensation. It is only reasonable to assume that a plant with, say, 400 men can turn in a better accident experience than forty plants with ten men each, as in one case there will be one directing head and in the other forty such heads. All classes under compensation are in effect a mutual insurance company and the question of equal treatment for all is a

most important matter and perhaps particularly so to the larger industries.

The Industrial Accident Prevention Associations would welcome the construction group in Ontario. On the other hand, if you desire to set up a separate organization we are glad to give you of our experience. In any event, the problem of accident prevention is a big one. Costs such as I have mentioned over a twelve year period of nearly $60,000,000 must make the people think. Nearly 600,000 accidents reported in twelve years and nearly 4,800 deaths takes the discussion entirely out of the bedtime story class, as the figures are not calculated to lull babes to sleep. Accident prevention is not a hobby, but can be made a source of satisfaction and profit to all concerned in the construction class.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Publications of the International Labour Office

THE League of Nations International Labour Office issues from time to time an encyclopædia of hygiene, pathology and social welfare, studied from the point of view of labour, industry and trades, under the title "Occupation and Health" to which reference has previously been made in the LABOUR GAZETTE. Six more brochures of this series have just been published containing articles on the following subjects: Formic Acid; Incandescent Mantles industry; Lead Poisoning; Methyl Alcohol; Oxalic Acid; and the Painting Industry.

Control and Treatment of Nickel Rash

A paper on the control and treatment of nickel rash is contributed to the *Journal of Industrial Hygiene* for December by Messrs. F. M. R. Bulmer, of the division of Industrial Hygiene, Ontario Department of Health, and E. A. Mackenzie, of Port Colborne, Ontario. The following paragraphs are extracted from the paper:—

It has long been recognized that the skin affection known as nickel rash, which is characterized by great itching, occurs in men working at nickel plating and nickel refining. The many speculations advanced to account for the rash have never aided to any extent its prevention or treatment, and its sporadic occurrence has added to the difficulty of its systematic study and the attainment of a method of control. In the early part of 1924 at the request of the International Nickel Company of Canada, Limited, an investigation was undertaken into the etiology and means of control of a rash occurring among the men engaged in refining nickel. This investigation continued till the end of December, 1925. The arrangements made with the company were such that whenever a rash occurred the patient was sent to the first aid department. Here he came under observation and obtained treatment. At first it was very difficult to get the cases early, but after a few months a good will was established between the men and the management and in only a few instances did any of them refuse to follow instructions.

The refinery of the International Nickel Company of Canada, Limited, is located in the town of Port Colborne. This refinery treats matte received from the smelter of the company at Copper Cliff, Ontario, where the mines are located. This matte, which contains approximately 55 per cent of nickel, 25 per cent of copper, and 20 per cent of sulphur, is processed in five different buildings to fine nickel and copper.

The various refinery processes are described, the writers proceeding as follows:—

"As one would expect, the processes in the various buildings greatly affect the worker's environment. In our series of cases the rash was of two more or less distinct types depending on the character of the man's work. Men who worked around the furnaces where it was extremely hot and fairly dusty had a rash which occurred mostly on the exposed flexor surfaces of the forearms, on the wrists, elbows, neck, forehead, and the upper part of the chest, which was usually bare of clothing. Some of the men also had the rash on the medial surface of the thighs, behind the knees, in the exillae, and on the abdomen.

"The second type of rash occurred generally in those employees who worked in the electrolytic building and were exposed to a hot, moist atmosphere. This rash was worst in patients who were susceptible to external irritations, such as poison ivy and grain dusts, and seemed to follow a loss of the normal, protective fatty substances of the skin, inasmuch as those whose skin remained soft and moist did not seem to be affected.

"Analysis of the cases coming under our observation during 1924 and 1925 shows that 63 per cent of these were in men of fair complexion. In view of the fact that the majority of the employees are foreigners, naturally dark

skinned, this preponderance of rash in the fair-skinned men is worthy of note. Forty per cent of the cases occurred in men of the Anglo-Saxon race, 20 per cent in men of French nationality, and the remaining 40 per cent was fairly equally distributed among men of Austrian, Polish, German, Roumanian, Russian and Italian nationalities. The average age was 30.4 years, the youngest being 18 and the oldest 55 years. Sixty per cent of the incidence was in married men. The average length of exposure before the rash occurred was nine and a quarter months; 46.6 per cent of the cases occurred after six months' exposure or less, and 17.7 per cent after an exposure of one month or less. The shortest exposure was one week and the longest thirty-one months.

"In 1923, the year previous to our investigation, 43 cases of nickel rash occurred in the whole plant, 22 men losing time. The total time lost was 4,016 hours, or an average of 93.4 hours per case. During 1924, the first year of our study, there were 22 cases, 4 men losing time. The number of hours lost was 408, or 18.5 hours per case. In the last year, 1925, there were 23 cases, and only 1 man lost time. The total time lost was 72 hours, or 3.1 hours per case."

The investigators finally reach the following conclusions:—

1. An insufficient cooling power in the worker's environment is the most important single factor in the causation of nickel rash.

2. An increased skin temperature allied with an alkaline sweat increases the irritability of the exposed parts, lowers their resistance, and increases their susceptibility to irritation.

3. The incidence of nickel rash might be greatly reduced by proper attention to ventilation and the maintenance of a suitable cooling power for the worker.

4. The cure of nickel rash can be hastened by the oral administration of calcium chloride, which counteracts the tendency toward alkalosis produced by excessive heat.

5. It is suggested that other occupational skin diseases may be produced by factors similar to those of importance in the etiology of nickel rash.

Responsibility for Explosions in Mines

An inquiry by the United States Bureau of Mines into recent mining accidents in Arizona, due to explosives, led the investigator to the following conclusions:—

"The responsibility for the prevention of explosives accidents rests jointly upon the mining companies and the men using the explosive. The companies must properly plan the operations, provide proper equipment, and establish an adequate inspection service, and the men must use care and common sense in handling the explosive. Although safety inspectors cannot visit all working places at blasting time, they should make periodical inspections. The companies should formulate plans and rules for the elimination of accidents from explosives and insist that the rules be enforced rigidly at all times. Inexperienced men, even those who do not have to handle explosives underground, should be properly instructed in the hazards of explosives and detonators. If explosives accidents happen frequently at any one place possible modifications of the mining system should be considered, even though each individual accident is due to carelessness or violations of rules. Mining systems should be made as nearly 'fool-proof' as possible; and all operations should be conducted in such manner that the opportunities for carelessness to cause accidents will be minimum."

No Accident Year at Port Colborne Cement Plant

Nearly 600 people gathered at the unveiling of the Portland Cement Safety Association Trophy at the Port Colborne plant of the Canadian Cement Company during December. A full account of the proceedings is given in the *Cement Bulletin*, the plant's publication. Representatives were present from the leading safety organizations of Canada and the United States, as were several of the prominent officials of the Canada Cement Company and delegates from Duluth (Universal) plant, which won a similar trophy by securing a perfect safety record in 1925 (LABOUR GAZETTE, February, 1926, page 144).

The trophy was offered by the Portland Cement Association for the cement plant on the continent having the best safety record in 1925. It is a handsomely carved structure placed on a concrete base at the end of a plot of ground about 75 feet in length. A space about ten feet square is raised three feet. At each of the four corners are concrete pillars 9 feet high, and between these are four smaller pillars. At the top of the larger posts are lights and in the centre of this space is placed the hard-won prize. The trophy is about 7 feet high and on the front are carved the figures of the Goddess of Wisdom and slightly behind her is a figure representing industry. Immediately below the figures, the words, "Safety Follows Wisdom"

are carved. Below appears this inscription: "Portland Cement Association Safety trophy awarded Canada Cement Company Limited, Plant No. 8, Port Colborne, Ontario, for a perfect safety record in 1925."

Visitor's Impressions of American Safety Movement

Dr. F. Ritzmann, chief of the Safety Service of the International Labour Office, in a recent issue of the *Industrial Safety Survey* (Geneva) sums up the impressions he received during a visit to the United States for the study of industrial safety. He finds that the strongest motive power in regard to safety lies in workmen's compensation, together with government pressure through regulation and inspection. Next in importance is the work of the National Safety Council, which is financially supported by its members in the expectation that the outlay will repay them. In addition to utilitarian considerations, however, an ethical side has developed in the movement, and this has become the predominant motive of many of those who are actively engaged in the safety movement. Dr. Ritzmann finds this combination of ethical and economic motives to be the characteristic note of the American school. As a general rule he found that the American employer was as little inclined as his colleagues in other parts of the world to sacrifice the interests of his business to philanthropic considerations. As one American employer told him: "When employers introduce social practices they do so with a view to preventing the interference of governments and the meddling of trade unions; and if by these means they also diminish the fluctuation of workers they perform a service to society." One important difference between American and European conditions lies in the fact that in America there is a notable absence of class arrogance, and a feeling of equality in the mutual intercourse of employer and employee. This explains why workers respond as they do in the matter of safety, to a reasonable appeal from their employer for the safeguarding of common interests. Dr. Ritzmann believes that the safety movement, while it may not continue at its present high tension, will be furthered in future by steady and systematic work, the work of inspectors employed by the State and by insurance companies, the work of safety engineers and safety committees, and above all the work of the teachers in schools of all kinds, "the object of which is to bring into the world a younger generation familiar with the safety idea." To this may be added what psychologists and engineers may be able to accomplish in the direction of placing each employee in the job most suitable, and therefore least dangerous, for him.

Unemployment Census in Japan

The results of a recent unemployment census in Japan has just been received from the Bureau of Statistics of the Imperial Cabinet. In view of the increasing importance of unemployment problems the Imperial Diet made an appropriation in 1925 for a statistical investigation on a national scale, to be held at midnight on October 1, 1925. Wage earners and salaried persons were enumerated, casual labourers being distinguished from the other workers as their employment was more subject to change. Apprentices not in receipt of wages were not included in the inquiry. The salaried class included only those receiving less than 200 yen a month. The investigation was carried out simultaneously with the population census. Each industrial centre investigated was provided with two instructors who guided the enumerators in the performance of their somewhat complicated duties.

Out of 11,505,077 persons, the aggregate population enumerated by the recent population census in all the areas covered by the Unemployment Census (which comprised the 21 most important industrial cities and the three principal mining centres, with neighboring districts in both cases) those who were subjected to the investigation numbered 2,355,096. The total number consisted of 634,412 salaried persons, 1,502,954 wage-earners and 217,730 casual labourers, the ratio to the total number enumerated being for the salaried persons 27 per cent, for the wage earners 64 per cent, and for the casual labourers 9 per cent. The unemployed persons enumerated in those areas totalled 105,595, comprising 20,178 salaried persons with the unemployment percentage of 3.2; 44,065 wage-earners with the percentage of 2.9; and 41,352 casual labourers with the percentage of 19.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

France and the Washington Hours Convention

A BILL authorizing the ratification of the Eight-Hour Day Convention "subject to the reservation that the obligations which it involves for France shall take effect only after the Convention has been ratified by Germany" was introduced by the then Minister of Labour of France on July 31, 1924. It was considered and approved, successively, by the Labour Committee, Foreign Affairs Committee, and Commerce and Industry Committee of the Chamber of Deputies, and on July 8, 1925, it was unanimously adopted by the Chamber itself, after an eloquent appeal from Mr. Durafour, the Minister of Labour of the Government then in power, for the fulfilment by France of the solemn obligations she assumed at Washington. Passing next to the Senate, the Bill was referred to the Commercial Committee of that House, and in June, 1926, it was announced that this Committee had reported in favour of the Bill. At the same time it was stated that two members of the Senate had intimated their intention to propose, when the Bill came before the Senate itself, that the reservation relating to ratification by Germany should be extended so as to apply to other countries, including Great Britain. The Senate has still to decide on this question. Early in December, the Bill was again before the Senate, which adopted Clause I, authorizing ratification, and adjourned until a later sitting the discussion on Clause 2 and on amendments attaching conditions to the ratification.

It may be mentioned that the Workers' Protection Bill has now been approved by the German Federal Cabinet. It is a comprehensive measure, including provisions for the regulation of hours of work which are intended to bring German legislation into line with the Hours Convention and to make possible its ratification by Germany.

Great Britain and the Eight-Hour Day

In answer to a question in the House of Commons, the Parliamentary Secretary to the Ministry of Labour stated that the Minister of Labour had found in June last that the examination of the results of the London Conference of Ministers of Labour on the ratification of the Eight-Hour Day Convention had necessarily to be postponed owing to the preoccupation of the Government with the industrial situation. The course of events since the date of the Minister's reply had not so far made it possible to carry the matter any further.

The White Lead Paint Bill in Great Britain

A Government bill has been before the British Parliament since last spring authorizing amended regulations applicable to the use of white lead in painting. The bill passed the House of Commons in September and has since been before the House of Lords. It does not propose ratification of the Convention of the International Labour Conference concerning the use of white lead in painting, which was adopted in Geneva in 1921, as it is felt by the British Government that it is possible to protect the health of the workers in this industry by amended regulations without resorting to prohibition. Reference was made in the parliamentary debate to recent improved methods which have been introduced in the painting industry in Great Britain, such as the use of waterproof sandpapers to enable wet rubbing to be done.

The "International Labour Review"

The December issue of the *International Labour Review* contains the following articles:

"The Constitutionality of Labour legislation in the United States of America: II, by William Gorham Rice, Jr., Law School, University of Wisconsin.

"Annual Holidays for Workers and Collective Agreements."

"The Conciliation and Arbitration of Industrial Disputes: II. The Machinery of Conciliation and Arbitration: An Analysis."

"The New Japanese Act on Health Insurance."

The section devoted to "Reports and Inquiries" includes the following: Wages and Hours of Work in Italian Industry in 1925; Factory Inspection in Japan in 1924; Vocational Education in China; Vocational Guidance in Germany in 1924-1925; Unemployment Insurance in the Netherlands in 1924; Dock Labour in Queensland.

The Constitutionality of Labour Legislation in the United States of America

The *International Labour Review* in its issues for November and December, is publishing an article entitled "The Constitutionality of Labour Legislation in the United States of America" by Wm. Gorham Rice, Jr., of the Law School of the University of Wisconsin, U.S.A. The writer points out that the Constitution of the United States effects a division of powers between the nation and the several States, and also places limits on the power, both of the United States and of the States, for the protection of the individual; similar restrictions on the powers of the States are found in several State constitutions. All these grants and limitations of power have to be taken into account by the courts in deciding whether legislation is constitutional or not, so that all laws are liable to a charge of unconstitutionality on many different grounds. Labour legislation, in particular, may thus be challenged on the ground either of invasion by the State of the field of action of the nation (or *vice versa*), or of violation of the rights of the individual. The first charge applies mainly to laws relating to employers' liability for workmen's injuries and child labour laws; the second, based most often on the provision that no person shall be "deprived of life, liberty, or property without due process of law," has been used against laws on prohibition of certain employments, on wages and other conditions of employment, restrictions on quitting employment or discharging employees, the settlement of industrial disputes, etc. After a brief exposition of the doctrine of judicial supremacy as accepted in the United States, Mr. Rice, gives an analysis of practically all cases of first importance and constitutes an exhaustive survey of the present position of labour legislation in relation to the Constitution.

Recognition of Unions in Argentina

A Bill is before the Senate of the Argentine Republic to enable associations of trade unions of workers to obtain recognition on application to the National Labour Department. The effect of such recognition would be to grant these bodies all the rights and privileges which are conferred upon corporate bodies under the Civil Code.

Conciliation and Arbitration of Industrial Disputes

Under the general heading "The Conciliation and Arbitration of Industrial Disputes," the *International Labour Review* publishes in its November number an article entitled "The Nature of Conciliation and Arbitration," which will be followed by two further articles devoted to an analysis of the machinery of conciliation and arbitration and an account of methods which, in practice, would appear to have given the most satisfactory results. The writer states that measures for the conciliation and arbitration of industrial disputes are a necessary adjunct to the modern organization of production, and are so regarded in the great majority of industrial countries. Stoppages of work, although in themselves of considerable and increasing economic importance, particularly in certain countries, are on the whole less important than the industrial unrest of which they are a manifestation. This unrest is primarily due to a number of psychological and economic causes, and is greatly accentuated by the cyclical fluctuations to which industry is subject. The four main methods of preventing and settling industrial disputes—conciliation, inquiry, arbitration, and wage determination—all have their advantages and disadvantages. In no sense can any one of them be looked upon as a panacea for industrial unrest, and in any case two of the chief elements in the problem—basic human unrest and instinctive pugnacity on the psychological side, the business cycle on the economic side—are out of the range of methods of conciliation and arbitration. Nevertheless, these four methods may be used with considerable effect in the prevention and settlement of industrial disputes. Conciliation in its preventive aspect, as exemplified by joint industrial councils, can be utilized to bring out and develop the essential identity of interests of the two sides as partners in industry. All four methods can be used in various ways for the settling of differences arising between employers and employed—conciliation, inquiry, and arbitration dealing particularly with the psychological elements of the problem, and wage determination with the economic elements.

INTERNATIONAL ECONOMIC CONFERENCE

Report of Preparatory Committee presented to the Council of the League of Nations

THE Preparatory Committee for the International Economic Conference has presented its report to the Council of the League of Nations. The Committee recommends that the Conference should be held in May, 1927; that the delegates, though appointed by Governments, should be chosen for their personal qualifications to deal with the subjects to be discussed, and should not be spokesmen of official policy; and that the agenda should take the form of a list of headings or questions appended to the report. The presentation of this report marks the completion of an essential preliminary stage towards that international co-operation in the study of economic difficulties and in the effort to overcome them which, in the hope of the Assembly of the League of Nations, may promote economic security and social peace among the peoples of the world. The Preparatory Committee consisted of thirty-five members of twenty-one nationalities, including industrialists, officials, economists, financiers, representatives of workers' and consumers' organizations, and agriculturists. The International Labour Office collaborated with the Secretariat of the League of Nations in the preparation of necessary information.

It is proposed by the Preparatory Committee that all Member States of the League of Nations and all non-Member States occupying a position of importance to the economic life of the world, should be invited to select members. The expenses of the members will be borne by the governments represented. It is suggested that each state should be invited to send members up to a maximum of five and that experts be permitted to accompany them for consultative purposes. The general scope of the agenda is indicated in a resolution of the Sixth Assembly of the League of Nations, which, after expressing the conviction that "economic peace will largely contribute to security among the nations," proclaimed "the necessity of investigating the economic difficulties which stand in the way of the revival of general prosperity, and of ascertaining the best means of overcoming these difficulties and of preventing disputes." The agenda had therefore to take account of the two objects contemplated by the Assembly, namely, the prosperity and the peace of the world, so far as they can be assisted by international discussion and collaboration. In the second place, the Committee had to bear in mind that the agenda of a general conference must be such as to allow on the one hand general discussion on the principal features in the world economic situation, and on the other hand more concentrated discussion on these special international questions on which practical results may be hoped for.

The agenda recommended by the Preparatory Committee is in two parts. The first is general; the second includes three groups of questions on which international discussion at the Conference with a view to practical action seems most likely to be useful. The agenda thus submitted is as follows:—

FIRST PART

The World Economic Position.

Principal features and problems as seen from the point of view of different countries.

Analysis of economic causes of the present disturbed equilibrium in commerce and industry.

Economic tendencies capable of affecting the peace of the world.

SECOND PART

I. Commerce.

(1) Liberty of trading.
- (*a*) Import and export prohibitions and restrictions.
- (*b*) Limitation, regulation or monopolization of trade.
- (*c*) Economic and fiscal treatment of nationals and companies of one country admitted to settle in the territory of another.

(2) Customs tariffs and commercial treaties. Obstacles to international trade arising from:
- (*a*) Form, level and instability of import and export tariffs.
- (*b*) Customs nomenclature and classification.

(3) Indirect methods of protecting national commerce and shipping.
- (*a*) Subsidies direct or indirect.
- (*b*) Dumping and anti-dumping legislation.
- (*c*) Discrimination arising from the conditions of transport.
- (*d*) Fiscal measures discriminating against foreign imported goods.

(4) Repercussion upon international commerce of reduced purchasing power.

II. Industry.

(1) Situation of principal industries (productive capacity, output, construction and employment).

(2) Nature of present difficulties in industry; their industrial, commercial and monetary causes.

(3) Possibilities of action:
- (*a*) Organization of production, including in particular international industrial agreements; considered from the point of view of production, of the consumer

and of labour; their legal position; their connection with customs problems.

(b) Importance of collection and prompt exchange of statistical information with regard to industrial production.

III. Agriculture.

(1) The present position of agriculture compared with pre-war conditions, in respect of production, consumption, stocks, prices and free circulation of agricultural products.

(2) Causes of present difficulties.

(3) Possibilities of international action:

(a) Development of, and international collaboration between, producers' and consumers' organizations, including the different systems of co-operative organization.

(b) Continuous exchange of all relevant information concerning agricultural conditions, scientific and technical research, agricultural credit, etc.

(c) Development of the purchasing power of agricultural producers.

The committee adds the following explanatory comment on the above agenda:

The agenda as a whole is in the form of a few main headings, so as to give a clear and simple picture of the range of the proposed discussions, and does not set out in detail the questions covered.

For example, the committee contemplates that the analysis of the causes of the disequilibrium mentioned in the first part of the agenda will cover discussions on such questions as the relative impoverishment of Europe and its effect on industry, commerce and agriculture; the instability of the exchange value or purchasing power of currencies and the inadequacy or high cost of capital, resulting from insufficient savings.

So, too, the heading as to the causes of the present difficulties in industry would naturally cover such questions as the abnormal increase of equipment in certain industries, the increase of cost prices resulting from the insufficiency and irregularity of demand and the difficulties of adaptation to post-war conditions.

The report points out that the Committee has given special prominence to two classes of questions "because of their intrinsic importance and the public interest in them at the present time." These two classes of questions are, on the one hand, problems of commercial and tariff policy, and, on the other hand, proposals for international industrial agreements.

Finally, the Committee remarks:

"Some of the difficulties which are referred to in the agenda are to a peculiar extent difficulties, in the first instance, of Europe. The Committee presumes, therefore, that attention will be given in discussing such questions to the special features in the European situation. The most important questions on the agenda are, however, clearly of world importance."

Constitution of Population of New Zealand

The annual report of the Department of Labour for the year ending March 31, 1926, publishes a table showing the number of people engaged in the various groups of occupations, the figures being based on the latest information available, which is that contained in the census of 1921.

Producers of necessaries of life—	
Primary	117,218
Secondary, domestic, etc.	498,891
	616,109
Engaged in distribution, etc.	138,231
Engaged in indirectly essential occupations such as teachers, servants of government and local bodies, lawyers, and other professional workers	33,424
Engaged in connection with luxuries and other non-essential occupations	7,698
Children and other dependents	423,451
	1,218,913

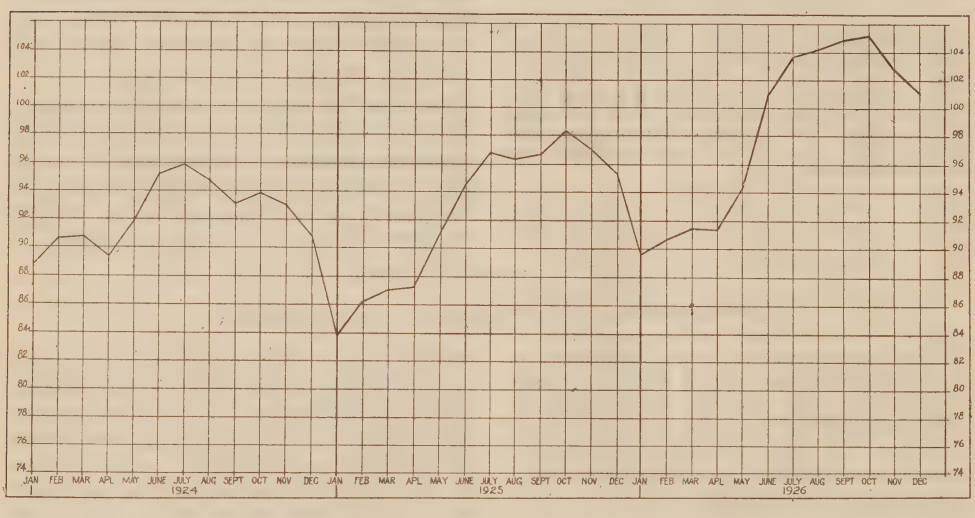
The report states that "it would, no doubt, be of considerable interest were it possible to compare the figures for the present time with those for, say, the past twenty-five years. Such comparison would disclose, for example, whether the number or proportion of the population that is engaged in (a) the production of the necessaries of life is increasing or decreasing; a similar comparison would show the proportion engaged in (b) distribution; (c) in various other occupations which, though not directly concerned with the production or distribution of the necessaries of life, may nevertheless be regarded as essential occupations; and (d) those occupations that may be classed as unnecessary for the maintenance of life. The information gathered at the previous censuses does not, however, permit of such comparisons being made."

The Hon. Alexander Ross resigned his position as minister of Public Works and Labour for the Province of Alberta at the end of the year, and was succeeded by the Hon. O. L. McPherson as minister of Public Works, the portfolio of Labour being taken by the premier, the Hon. John Brownlee.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF DECEMBER, 1926, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THERE were further seasonal contractions in employment at the beginning of December, 14,435 persons being released by the 5,895 firms making returns, whose staffs aggregated 832,847. These losses were the smallest reported on December 1 in any year since the record was begun in 1920, with the exception of 1922, and the situation was more favourable than on the corresponding date in any of the last five years; in fact, employment, despite the seasonal curtailment on the date under review, continued at a higher level than in any month of the years 1921-1925. The index on December 1, 1926, stood at 101.1, as compared with 102.8 in the preceding month, and with 95.3, 90.8, 95.7, 95.1 and 87.2 on December 1, 1925, 1924, 1923, 1922 and 1921, respectively.

The most pronounced declines were those of a seasonal nature in construction; there were also losses in transportation, services and manufacturing, in which the reductions were less extensive than is customary at the time of year. On the other hand, logging, trade and coal mining were seasonally active, the improvement being greater than on December 1 in previous years of this record.



Employment by Provinces

Curtailment was noted in all provinces, but firms in Quebec recorded the greatest decreases.

Maritime Provinces.—Employment in the Maritime Provinces showed a further decrease, chiefly in lumber mills and construction. Logging, mining, transportation and trade, however, showed considerable improvement. Statements were received from 510 firms employing 62,974 persons, against 64,115 in their last report. This reduction was somewhat less than that noted on December 1, 1925, when the index was slightly lower.

Quebec.—The largest losses in Quebec were recorded in construction and transportation, but manufacturing, mining and services were also slacker. Logging and trade, on the other hand, registered gains. The working force of the 1,291 co-operating employers declined from 245,235 on November 1, to 239,476 at the beginning of December. Conditions were more favourable than on the same date of any other year of the record, which was begun in 1920.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

Ontario.—Continued, but less extensive contractions were indicated in Ontario, where 2,703 firms released 2,469 workers from their staffs, bringing them to 344,089 on December 1. This reduction was much smaller than on the corresponding date in any other year since 1920, except 1922; on December 1 in the last five years the index was lower than on the date under review. As in the other provinces, construction reported the heaviest losses, but there were also important recessions in manufacturing, chiefly in lumber mills. Logging and trade, however, recorded marked improvement.

Prairie Provinces.—Seasonal reductions on a rather larger scale than in 1925 were indicated in the Prairie Provinces, according to statistics from 750 employers, whose payrolls totalled 110,923, or 2,663 less than on November 1. Logging, coal mining and trade showed considerable increases, but larger declines took place in construction and transportation also recorded less activity than in the preceding month. Employment was in greater volume than on December 1 in any other year since 1920.

British Columbia.—Manufacturing, particularly of food and lumber products, showed a seasonal falling off, as did construction. Transportation and mining were also slacker, while logging and trade shared in the upward movement indicated throughout the Dominion. Data were tabulated from 642 firms with 75,385 workers, as compared with 77,788 in the preceding month. The index was higher than at the beginning of December in any previous year of the record, which was commenced in 1920.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

Firms in Montreal, Quebec, Ottawa and Hamilton reduced their staffs, while in Toronto, Windsor, Winnipeg and Vancouver improvement was noted.

Montreal.—Employment in Montreal showed a further seasonal decline, most of which took place in shipping and stevedoring. Construction was also slacker and there was a decrease in textiles, but iron and steel and trade reported pronounced gains. An aggregate working force of 114,204 persons was employed by the 693 firms whose statistics were received and who had 117,210 employees on November 1. The situation continued to be more favourable than on the corresponding date last year, although somewhat smaller declines were then recorded.

Quebec.—Transportation and construction reported reductions in personnel, while manufacturing was rather busier. The payrolls of the 90 co-operating employers totalled 8,932 persons, compared with 9,158 in the preceding month. Activity was greater than on December 1, 1925, when larger losses were noted.

Toronto.—Employment in Toronto showed a further increase, 218 persons being added to the staffs of the 776 reporting establishments, which had 101,067 employees at the beginning of December. Manufacturing as a whole gained, and substantial improvement was indicated in trade. Construction, however, registered a seasonal contraction. The index number was several points higher than on the same date in 1925; although the improvement then was rather greater.

Ottawa.—There was a considerable drop in employment in sawmills in Ottawa and construction was also slacker. Trade, however, registered a decidedly upward movement. Statements were received from 128 firms, employing 9,916 workers, as compared with 10,342 in the preceding month. Conditions were somewhat better than on December 1, 1925, when larger decreases were indicated.

Hamilton.—Further losses were noted in Hamilton, where 199 employers released 529 persons from their working forces, bringing them to 29,399 on the date under review. The greatest recessions were in construction, but manufacturing as a whole was also dull. Employment was at a much higher level than on the corresponding date in 1925.

Windsor and the other Border Cities.—Some recovery was recorded in the Border Cities, particularly in automobile factories. A combined payroll of 10,978 persons was registered by the 86 firms furnishing data, who had 10,769 on November 1. The index was higher than on December a year ago, when much smaller gains were reported.

Winnipeg.—Trade was decidedly more active, while construction and manufacturing released help; 276 employers had 28,481 workers, or 203 more than in the preceding month. Reductions were recorded in the same month last year and the situation then was less favourable.

Vancouver.—Very little change was noted in Vancouver, but employment continued to be brisker than on the same date in 1925, according to statistics received from 228 firms with 25,512 employees. Manufacturing showed curtailment, while trade reported marked improvement as compared with the last report.

Index numbers by cities are given in Table II.

Manufacturing Industries

As already pointed out, the losses in manufacturing on December 1, 1926, were smaller than is usual on that date, and employment continued at a higher level than in the same month of any other year since 1920. Lumber mills registered pronounced seasonal curtailment; there was also a falling-off in building material and electric current plants. Boot and shoe, pulp and paper, rubber, tobacco and iron and steel factories, however, reported heightened activity. The result was a decline of 5,998 workers in the forces of the 3,771 manufacturers furnishing data, who employed 461,655 operatives on the date under review.

Animal Products, Edible.—Meat-preserving establishments reported substantial improvement, particularly in the Prairie Provinces, but there was a further seasonal decline in fish canneries, chiefly in British Columbia. The result was a reduction of 51 persons in the staffs of the 156 firms making returns, who had 15,175 employees. This decrease was very much smaller than that recorded on the corresponding date in 1925, when the index number was several points lower.

Fur and its Products.—The trend of employment in fur manufactories was downward, according to statistics from 23 employers with 1,203 workers on their payrolls. The level of employment was rather lower than on December 1, 1925; little change in the situation was shown on that date.

Leather and Products.—Continuing the favourable movement indicated in the last six months, employment in this industry showed a considerable increase at the beginning of December. Tanneries, boot and shoe and

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

Dec. 1	101·1	85·1	107·7	96·8	105·4	112·7	93·9
Relative weight of employment by districts and in manufacturing as at Dec. 1, 1926	100·0	7·6	28·8	41·3	13·3	9·0	55·4

other leather-using plants shared in the gain. Statements were tabulated from 190 manufacturers employing 18,031 persons, as compared with 17,679 on November 1. The largest gains were in Ontario. Somewhat smaller additions to staffs were noted on the same date in 1925, and the index number then was nearly seven points lower.

Lumber and Products.—Seasonal curtailment of operations on a rather larger scale than in the preceding month was noted in sawmills. Furniture, vehicle and other wood-using industries, however, reported additions to payroll. All provinces shared in the downward movement, which was most pronounced in Ontario. Data were received from 714 firms in this industry, whose staffs declined from 52,320 on November 1 to 44,644 employees at the beginning of December. The index number was higher than on December 1 in the last three years.

Plant Products, Edible.—Varying conditions in the different divisions of the vegetable food group produced a net decline of 42 persons in the industry as a whole. A combined working force of 29,470 operatives was reported by the 312 co-operating manufacturers. Fruit and vegetable canneries released help, as they completed their season's work, while sugar and syrup, starch and glucose and some other divisions reported improvement. In the Maritime and Prairie Provinces and Quebec activity increased, but in Ontario and British Columbia curtailment was indicated. The volume of employment was greater than on December 1 a year ago, when very much greater contractions were noted.

Pulp and Paper.—Statements were received from 452 manufacturers in the pulp and paper industry who increased their payrolls by 324 persons to 57,198 at the beginning of December. Employment continued to be considerably brisker than on the same date in 1925. The bulk of the improvement took place in printing and publishing establishments, while pulp and paper works released some employees. Improvement was shown in all provinces except Quebec and British Columbia.

Rubber Products.—Additions to staffs on a slightly smaller scale than on the corresponding date of the preceding year were noted in

the rubber group, in which 756 workers were added to the staffs of the 32 reporting manufacturers. They employed 12,903 workers on December 1. The largest gains were in Ontario.

Textiles and Products.—Little change on the whole was shown in this division, important additions to staffs in cotton and knitting mills offsetting reductions in garment and personal furnishing factories. Returns were compiled from 506 manufacturers employing 72,555 workers, almost the same number as in the preceding month. The gains took place in Ontario, while elsewhere the tendency was

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

downward. Although general improvement was noted at the beginning of December, 1925, the index number then was several points lower.

Tobacco, Distilled and Malt Liquors.—A continuation of the upward movement indicated in the preceding month was reported in this industry; 105 manufacturers employed 12,328 persons, as compared with 12,116 on November 1. This improvement, which took place chiefly in Ontario, exceeded that noted on December 1, 1925, when the index number was practically the same.

Clay, Glass and Stone Products.—Seasonal reductions in personnel were made in building material factories, according to statistics from 116 manufacturers, whose staffs declined from 10,641 in their last report to 10,092 on the date under review. The largest declines were in brick factories, but all divisions of the industry shared in the downward movement. The losses were distributed over the country. The index number, at 100.5, compared with 89.3 on December 1, 1925, when smaller contractions were noted.

Electric Current.—There were further moderate reductions in electric current plants, 83 of which reported 11,992 employees, or 189 less than in the preceding month. Practically all the recessions took place in Ontario. A much greater falling-off was noted on December 1 in the preceding year, when the index number was slightly lower.

Iron and Steel Products.—Additions to payroll on a larger scale than were the reductions registered in the preceding month, were shown in iron and steel factories; the crude, rolled and forged, plant machinery, agricultural implement and wire divisions recorded increased activity, while heating appliances and structural iron and steel works were slacker. The result was an increase of 848 persons in the staffs of the 640 co-operating manufacturers, who employed 125,197 workers, a larger number than was reported on any date in 1924 or 1925. The Maritime Provinces and Quebec registered the improvement on the date under review, while elsewhere employment declined.

Logging

The expansion recorded on December 1 exceeded that noted on the corresponding date of any other year of the record, but the index number, though as high as in 1925, was lower than in the corresponding month of some of the earlier winters of the record. Statements were tabulated from 228 logging camps, having 32,308 employees, or 8,605 more than in their last report. Although the largest gains were in Quebec and Ontario, the movement was upward in all provinces.

Mining

Coal.—Employment in coal mines has increased steadily since August; on December 1, 1,660 workers were added to the rolls of the 88 reporting operators who had 28,709 employees. Alberta reported most of the improvement, but there were also additions to staffs in the eastern coal fields. The seasonal gains indicated on the corresponding date in 1925 were rather smaller, and the index number then stood at 85.2, as compared with 92.1 on December 1, 1926.

Metallic Ores.—Activity in metallic ores showed a moderate contraction, according to statistics from 47 mine operators with 11,589 employees, as compared with 11,827 in the preceding month. The losses took place chiefly in Quebec and British Columbia. A similar falling-off was in evidence on the corresponding date in 1925, when employment was in considerably smaller volume.

Non-Metallic Minerals, other than Coal.—Continued declines in employment were noted in this industry on December 1, 331 persons being released from the staffs of the 68 firms furnishing data, who had 6,370 workers. All provinces shared in this seasonal reduction, which involved approximately the same number of workers as that noted on the corresponding date of the preceding year. The index number then was over six points lower.

Transportation

Street Railways and Cartage.—A further and more pronounced shrinkage in employment was noted in local transportation, but the decrease was smaller than on the corresponding date in 1925. Data were tabulated from 113 employers with 19,025 employees, as compared with 19,474 in the preceding month. The largest losses were in Quebec.

Steam Railways.—The trend of employment in railway operation continued to be seasonally downward; 915 workers were let out from the staffs of the 102 employers and divisional superintendents whose statistics were received and who had 79,066 employees. This number was higher than in any month of 1925. The most marked changes on December 1, 1926, were in the Prairie Provinces.

Shipping and Stevedoring.—According to information received from 59 companies employing 13,192 persons, there was a heavy seasonal reduction in shipping, chiefly in Quebec, 2,785 employees having been released by

these firms since November 1. Smaller losses were noted on December 1, 1925, when the level of employment was rather higher.

Construction and Maintenance

Building.—Employment in building construction showed a seasonal falling-off from the preceding month, although it was still at a higher level than in any month in previous years of the record, which was instituted in 1920. The reductions reported on December 1, 1925, were slightly larger. Statements were compiled from 339 contractors employing 32,429 persons, as compared with 34,579 on November 1. The most extensive curtailment was in Ontario, although there were general recessions throughout the country.

Highway.—Further important decreases were noted in the staffs of the 119 highway contractors furnishing statistics, who employed 11,206 workers on December 1, as compared with 17,791 in the preceding month. The number released was greater than on December 1, 1925. These decreases were also widespread.

Railway.—Employment on railway construction and maintenance showed another seasonal decline, which was greater than on the corresponding date of the preceding year. The index number then, however, was some ten points lower than on December 1, 1926. Statistics were received from 35 contractors and divisional superintendents, whose staffs declined from 41,495 men on November 1, to 33,452 on the date under review. The most pronounced contractions were in the Prairie Provinces, although there were general losses throughout the country.

Services

Further seasonal reductions were reported by the 172 co-operating firms in this division, who had 14,468 employees, or 235 less than in the preceding month. Summer hotels continued to decrease their working forces, while little general change was shown in other divisions of the service group. Employment was more active than on December 1 of any previous year of the record; the losses reported on that date in 1925 were substantially greater.

Trade

Further and larger seasonal increases were noted in trade, the additions being the most extensive ever registered in the history of this record, which was begun in 1920. The index, standing 109.8, was its highest level in the last seven years. Reports were received from 570 trading establishments with 64,620 employees, or 3,103 more than on November 1. A very large percentage of this gain was in retail stores, although wholesale trade also increased. All provinces shared in the upward movement.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for December 1, 1926.

ANNUAL REVIEW OF EMPLOYMENT IN CANADA DURING 1926

EMPLOYMENT as reported by employers in Canada during 1926 was in greater volume than in any other year since 1920, when the series was begun, there being almost uninterrupted expansion on a large scale from early in January until the first of October. This upward swing carried the curve of employment to a level many points higher than in any of the last five years. During these months of advancing employment, nearly 125,000 persons were added to the staffs of the reporting firms, a greater number than had been taken on in the same period of any other year of the record except 1922, when the opening up of industry following the depression of 1921 caused the employment of approximately the same number of extra employees. In 1926, the most extensive gains were recorded at the beginning of May, June and July, as is usually the case. There were smaller increases in the next three months, followed by declines at the beginning of November and December. Owing partly to the effect of an early winter upon construction, the losses recorded on November 1 were rather larger than on the same date in 1925 or 1924, but on December 1 they were smaller than on the corresponding date of any other year of the record, except 1922.

The chart on page 76 illustrates the course of employment in Canada since the beginning of 1924; the upward movement indicated during the greater part of 1926 is shown, as is the fact that on December 1, the curve of employment was still at a higher level than in any month of the years 1924-1925.

The Dominion Bureau of Statistics tabulated payroll data from some 5,850 firms who employed a monthly average of 807,342 workers during 1926, their staffs varying between

733,175 on January 1 and 865,013 at the beginning of October. The index number, with January 1920, as 100, reached its highest point for the year in that month, standing at 105.2 as compared with the 1925 peak of 98.3 on October 1 and with 100.2 on August 1, 1923, the previous high level of the years 1921-25. The index averaged 98.4 during the year under review, as compared with 92.5 in 1925, 92.3 in 1924, 94.6 in 1923, 87.9 in 1922, and 87.8 in 1921.

The most outstanding feature of the situation during the year was the marked expansion in construction, in which the number of workers covered by these statistics more than doubled during the summer. Manufacturing showed consistent gains for many months, affording considerably more employment than in earlier years of the record, except 1920. Transportation, mining, services, communication and trade were all much more active than in preceding years; in the last named, and in construction, employment attained its highest point in the record. Logging, on the other hand, was quieter than in former years.

Employment by Economic Areas

Firms in all provinces reported augmented employment during 1926 as compared with 1925. As in the preceding year, the index of employment was higher in British Columbia and Quebec than elsewhere.

Maritime Provinces.—In the early part of 1926, employment in the Maritime Provinces showed an increase largely owing to seasonal activity at the winter ports. Declines were recorded at the beginning of April and May, succeeded by four months of expansion. From the beginning of October until the end of the year, however, curtailment was noted. The index number averaged 88.6, as compared with 86.4 in 1925, 86.1 in 1924 and 94.2 in 1923. Manufacturing, as a whole, afforded more employment than in the preceding year. The lumber industry was comparatively dull in the earlier months of 1926, but reported considerable improvement from July onward. Pulp and paper showed a much more favourable situation, and iron and steel, on the whole, was more active. Employment in mining was at a low level until the autumn, when rapid expansion brought the index number to a point higher than in either 1925 or 1924. During the greater part of the year, transportation afforded substantially more employment than in the preceding year. Construction was generally active, although the index did not reach as high a point as in 1925, while trade registered slightly less employment. The aggregate payrolls of the reporting firms in the Maritime Provinces averaged 65,339 persons, a rather larger number than the average for the preceding year.

Quebec.—Continuous improvement was noted in Quebec from the first of the year until August, followed by moderate declines during the next four months. Although the period of expansion in 1925 had lasted somewhat longer, the number of persons added to staffs was substantially larger during 1926. From the low point of 90.7 on January 1, the index rose to 113.5 at its peak on August 1. The payrolls of the 1,250 co-operating employers varied between 198,418 and 249,147 on those dates, respectively, averaging 229,076 in the twelve months. The mean index was 104.3, as compared with 96.2 in the preceding year. Manufacturing as a whole was much brisker in every month of 1926 as compared with the same month of 1925. The index was also higher than the general index in manufacturing for Canada. With few exceptions, employment in lumber products was at a lower level until August, but in recent months improvement over 1925 has been shown; pulp and paper, textiles, iron and steel and other manufactures recorded a materially greater volume of employment than in the preceding year. With the commencement of development work in the metallic ore areas of Quebec, employment in mining has gained but not so extensively as may be looked for when operations are more fully established. Communication, transportation, services and trade were all considerably more active than in 1925, as was construction. The advances in this industry were closely associated with the development of the power and pulp and paper industries. It is worthy of note that during the summer, over half of the employees reported in construction in the Dominion were working in Quebec.

Ontario.—Employment in Ontario showed the same general fluctuations in 1926 as in 1925; the usual losses at the beginning of the year were followed by two months of partial recovery. The cessation of logging operations caused employment to decline on April 1, but extensive gains were made in succeeding months, with only one exception, until the beginning of November. This expansion brought the index to 98.7, the highest point reached since the latter part of 1920. An average payroll of 331,762 persons was recorded by the firms furnishing data in Ontario, as compared with an average of 315,772 in 1925; the index averaged 93.5 in 1926, or 4.5 points higher than in the preceding year. Manufacturers reported a better situation than

in 1925, the index number being between five and six points higher at its peak at 94.6 on October 1 than on the same date in 1925, when employment was also at its maximum for the year. Employment in lumber, pulp and paper, textiles, iron and steel and other manufactures showed decided improvement over the preceding year. Operations in log-

Relative weight of employment by economic areas as at Dec. 1, 1926	7·6	28·8	41·3	13·3	9·0	100·

NOTE.—The number employed by the reporting firms in Jan. 1920, is taken as 100 in every case. The "relative weight" in this table shows the proportion of employees reported in the indicated city to the total number of employees reported in Canada by the firms making returns on Dec. 1, 1926.

ging camps were somewhat curtailed, and mining, until the last quarter of 1926 was not as active. On the other hand, communication, transportation, construction and maintenance and services employed larger payrolls. The index of employment in trade averaged practically the same.

Prairie Provinces.—Pronounced expansion was indicated in the Prairie Provinces during the summer months; the staffs of the employers furnishing data averaged 105,891 during the year and the index, 100.2, while in 1925 an average payroll of 98,563 persons and a mean index of 92.7 was recorded. The level of employment in manufacturing, mining, communication, transportation, construction and maintenance, services and trade was higher in 1926 than in 1925, when the situa-

tion generally was better than in 1924. The improvement in construction and transportation was particularly marked. Pulp and paper, iron and steel and other divisions shared in the upward movement noted within the manufacturing group. Logging and mining, on the whole, were slacker than in the preceding year, although both, and especially the latter, showed a higher level of employment towards the close of 1926.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (Jan., 1920=100)

The relative weight shows the proportion of employees reported in one indicated industry to the total number of employees reported in Canada by other firms making returns on Dec. 1, 1926.

British Columbia.—The firms reporting in British Columbia employed an average working force of 75,274 persons, while in 1925 the average was 71,805. The index averaged 112.9, the highest since the record was begun in 1920; in 1925 the mean index stood at 105.6. At the end of the year, employment was over 12 points higher than at the beginning. All branches of manufacturing showed heightened activity, especially the lumber and pulp

[1]The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on Dec. 1, 1926.

Employment by Cities

Marked improvement as compared with 1925 was recorded in Montreal, Toronto, Hamilton, Windsor, Winnipeg and Vancouver; there were moderate gains in Quebec, while in Ottawa, conditions did not show much change.

Montreal.—The staffs of the Montreal firms making returns averaged 111,514 persons as compared with an average of 105,713 on the payrolls of the employers reporting in 1925; the index, at 98.3, was over five points higher than that for the preceding year. Steady increases were indicated from early in January until August 1, from which date employment showed moderate declines. Manufacturing as a whole, especially of food and iron and steel products, reported considerable gains; textiles and printing and publishing were somewhat busier, while the tobacco, distilled and malt liquor group registered reduced activity on the whole. Transportation, construction and trade generally showed a much better situation, but communication was rather quieter than in 1925, although the volume of employment which increased towards the last quarter of 1926 was greater than in earlier years of the record.

Quebec.—The tendency during most of the year was moderately upward, the index, which stood at 89.9 on January 1, rising to its maximum of 104.2 on July 1. At the beginning of December, however, it had decreased to 101.2, which was higher than on the same date in 1925 or 1924, when the record for Quebec was instituted. The staffs of the firms furnishing statistics averaged 8,487 and the index, 98.0 in 1926. Manufacturing and transportation were active, while construction did not afford as much employment in the early part of the year as in 1925, but showed marked improvement from the spring onward.

Toronto.—Employment at the beginning of January, 1926, showed the pronounced curtailment usual at the holiday season, although the losses were less extensive than on the same date of preceding years. From January on, however, the movement was consistently favourable, the index, which rose from 86.1 on January 1 to 93.9 on December 1, averaging 90.2 as against 86.7 in 1925. The number of persons employed by the co-operating firms during 1926 averaged 96,716, while in the year before it was 93,413. Within the manufacturing group, iron and steel, printing and publishing recorded marked gains and in food and textiles there were somewhat smaller increases. Communication and construction were decidedly more active; employment in trade was maintained at about the same level as in 1925, while local transportation was slacker, which may be partly a result of the growth in the number of automobiles owned.

Ottawa.—Manufacturing on the whole recorded moderate improvement in 1926 as compared with the preceding year, but little general change was shown in other industries. An average payroll of 9,916 persons was employed by the employers furnishing data; this was almost the same number as in the preceding year, while the index, at 93.9 in 1926, remained practically stationary.

Hamilton.—Steady improvement was noted in Hamilton from early in January until September 1, when the index stood at 100.3, the highest point in the record, which was begun in 1922. The peak of employment during 1925 was on December 1, the index then being 88.7. Manufacturing, generally, was considerably more active; the textile and iron and steel industries maintained a higher level of employment than in the preceding year; the staffs of electrical apparatus factories, smaller in the early part of the year, increased considerably from the summer until they were greater than in previous years of the record. Construction until June was more active, but in the second half of 1926 the index was lower. Employment in trade averaged approximately the same as in 1925. The co-operating firms reported an average working force of 28,645 persons, while in the preceding year the average was 25,343. The mean index was 94.3, nearly 11 points higher than in 1925.

Windsor and Other Border Cities.—The index number of employment in the Border Cities averaged 99.9 and the payrolls registered averaged 10,930 in 1926, compared with 85.4 and 9,307, respectively, in the six months of 1925 for which statistics are available. Marked activity was indicated in the automobile and associated industries, while construction also recorded expansion.

Winnipeg.—Steady improvement was reported during the greater part of the year; the index number, standing at 89.3 on January 1, rose to 105.4 at the beginning of December. The mean for the 12 months was 96.9, compared with 86.5 in 1925. Manufacturing, generally, was busier, as were transportation and trade, but the most pronounced gains during the year were in construction. An average working force of 26,759 persons was recorded by the firms whose data were received.

Vancouver.—The situation in Vancouver, already favourable, was much better at the close of the year than at the beginning, the

index standing at 117.1 on December 1 as compared with 105.8 on January 1. The average for 1926, at 115.4, was over nine points higher than in the preceding year, while the staffs covered averaged 25,035 as against 23,193 in 1925. Manufacturing, as a whole, communication, transportation, construction, services and trade all reported heightened activity. Employment in lumber mills was in rather smaller volume than in 1925.

Index numbers by cities are given in Table II.

Manufacturing Industries

The year 1926 was characterized by eight months of steady advances in manufacturing; between February 1 and September 1, approximately 65,000 persons were added to the staffs of the reporting factories. The level of employment was higher during 1926 than in any other year since 1920. Statistics were received from some 3,775 manufacturers employing an average payroll of 452,392 operatives, as compared with 423,028 in 1925, while the mean index, standing at 92.1, compared with an average of 86.0 in the preceding year. Practically all divisions of manufacturing shared in the generally favourable movement. Especially noteworthy were the gains in iron and steel, lumber, pulp and paper, food and textile groups, which together employed a very large proportion of the workers engaged in manufacturing processes. Although the usual heavy losses incidental to the holiday and inventory season will have reduced employment to a considerable extent on January 1, 1927, it may be expected that the upward tendency will soon be resumed.

Animal Products, Edible.—Employment in this division during 1925 was better than in any previous year of the record, and further improvement was noted in 1926. Fish and meat-preserving plants and dairies registered marked activity. The payrolls of the reporting employers averaged 14,953 persons, varying between 12,965 on March 1 and 16,645 at the beginning of September. The mean index was 97.1, compared with 94.7 in 1925.

Leather and Products.—Boot and shoe and other leather-using factories afforded more employment than in the preceding year. Uninterrupted gains were noted from May onward and the index, at its peak on December 1, was 83.2, compared with the maximum of 76.5 on the same date in 1925. An average working force of 16,896 persons was recorded by the co-operating manufacturers and the mean index was 77.8 as compared with 73.2 in 1925.

Lumber Products.—The seasonal movements always felt in lumber works caused the usual fluctuations in employment during 1926; the changes were not as marked as in 1925, but the situation generally was more favourable. Steady gains between February 1 and August 1 were succeeded by consistent losses during the latter part of the year. The working forces of the firms furnishing data ranged between 38,016 at the beginning of January and 58,473 on August 1, averaging 49,384 in the 12 months, as compared with the 1925 mean payroll of 48,392. The average index, standing at 100.5, was nearly four points higher than in the preceding year; it was also greater than in 1924, but less than in 1923. The furniture, rough and dressed, and other branches of the lumber industry recorded a larger volume of employment in 1926 than in the previous two years.

Musical Instruments.—Some recovery from the depression that has characterized recent years was shown in musical instrument factories, there being steady, though moderate gains during the greater part of 1926. The index averaged 71.3, against 62.0 in 1925, while the staffs of the co-operating employers averaged 3,103 during the year under review. The production of radio apparatus is not included in this industrial group, which has undoubtedly been affected by the marked activity recently prevailing in that line.

Plant Products, Edible.—Employment in vegetable food factories averaged higher in 1926 than in the preceding year. The sugar, biscuit, confectionery and canning industries reported greater activity in nearly every month. An average working force of 27,225 persons was registered by the co-operating establishments, in which the number of operatives ranged between 24,813 on May 1 and 31,557 at the beginning of October. The mean index of 98.5 in 1926 compared favourably with with the 1925 average of 96.1.

Pulp and Paper.—Continued development of the pulp and paper industry caused considerable increases in employment which was at a higher level in 1926 than in any other of the seven years for which records are available. The reported staffs averaged 54,958 and the index 107.9 in 1926, as compared with 51,327 and 100.2, respectively, in 1925. Most of the improvement took place in pulp and paper mills, but printing and publishing and other industries coming under this heading were also busier.

Rubber Products.—There were considerable fluctuations in employment in rubber factories during the year under review, succeeding the almost continuous expansion that marked 1925, when employment on the whole was in smaller volume. The mean index in 1926 was

87.7, compared with an average of 84.7 in the preceding year. At the beginning of December, however, the situation was rather less favourable than on the same date in 1925. Footwear and tire factories were fairly active in Quebec and Ontario. The payrolls of the firms supplying information averaged 12,523, ranging between 12,125 on July 1 and 13,299 on January 1.

Textile Products.—Employment in the textile industries showed almost the same trends as in 1925, improvement in the first three months being followed by losses at the beginning of May and June, succeeded in turn by recovery in the next five months. The situation was consistently more favourable in the year under review than in any other since 1920, the index number averaging 92.6, compared with 87.9 in 1925. An average staff of 71,251 workers was reported by the co-operating plants. The hosiery and knit goods, thread, yarn and cloth groups were decidedly busier during the year, while employment in garment factories remained, on the whole, in about the same volume.

Tobacco, Distilled and Malt Liquors.—Statements were compiled from over 100 manufacturers, whose working force averaged 11,485, varying between 9,969 on January 1 and 12,328 at the beginning of December. The mean index of 97.8 in 1926 was practically the same as in 1925, when more pronounced recovery was noted. Tobacco factories and breweries were moderately active during the year under review.

Chemical and Allied Products.—A higher level of employment than in 1925 and 1924 was recorded in this group during 1926, when the index averaged 83.7, as compared with 80.7 in the preceding year. An average payroll of 6,429 workers was employed by the firms whose statistics were tabulated.

Clay, Glass and Stone Products.—Continuous improvement was reported from the beginning of the year until September, a longer period of expansion than has been recorded in any recent year. The index number averaged 96.8 while in 1925 it was 82.7. The marked activity registered in building during 1926 is reflected in the employment afforded by building material factories, 115 of which reported an average working force of 9,613 persons. At the maximum, the number employed was 10,864.

Electric Current.—The number of persons employed in electric current works was rather smaller than in 1925, when the index averaged 130.5 as compared with 126.0 during the year under review. The staffs of the co-operating plants averaged 11,838 during 1926.

Electrical Apparatus.—Employment in this division, which includes the manufacture of radios and other equipment, was in greater volume during 1926 than in any other year of the record, which was commenced in 1920. The reported payroll averaged 9,644 and the index 122.2, as compared with 9,038 and 114.1, respectively, in 1925. Additions to staffs were registered during the greater part of the year.

Iron and Steel Products.—Substantial improvement in the employment situation was noted during 1926, the mean index, 80.3, being almost nine points above the 1925 average, with the exception of 1923, when employment was very slightly brisker, the year under review was more favourable than in any other since 1920. Automobile, railway car and agricultural implement plants showed important gains, and an upward movement was also indicated in the rolling-mill, heating appliance, general plant machinery, structural iron and steel and other divisions of this group. The working forces of some 635 firms who reported during 1926 averaged 123,748, while in 1925 the average was 110,245.

Non-Ferrous Metal Products.—With only one exception, employment in this division increased uninterruptedly from January to December, activity being greater than in any other year since 1920. The index averaged 96.3 and the payrolls reported, 14,361, compared with 81.6 and 11,115, respectively, in the year preceding.

Non-Metallic Mineral Products.—Employment in this group showed more variation than in 1925, but the average was practically the same. The mean index stood at 104.5, compared with 105.0 in the preceding year. Statements were received from over 75 firms with an average force of 9,606 persons. Gas and petroleum plants maintained a fair volume of employment.

Other Manufacturing Industries.—Little change in the general situation, as compared with 1925, was reported in the fur, wood distillate and extract and other manufacturing industries.

Logging

Logging camps reported less activity than in the preceding year, although pronounced seasonal gains were indicated during the autumn and early winter. The working force of the firms supplying data averaged 21,947 and the index number 55.2 in 1926; in 1925 the mean index was 58.4 and the average payroll 23,154. The practice, constantly gaining

in popularity, of the larger operators doing their cutting through small contractors and local settlers in the northern reaches makes it increasingly difficult to collect current statistics on employment. As usual, the greatest variation in logging was in Ontario and Quebec, while in British Columbia a more constant volume of employment was afforded.

Mining

Owing to the losses in mining reported in the early months of 1926, employment did not average as high as in 1925, but from the spring, steady recovery was indicated and the index on December 1 stood at 104.2 compared with 96.9 on that date in the preceding year.

In *coal mining,* the situation improved considerably from May; the mean index, at 81.2, compares with 79.9 in 1925. The working force of the firms furnishing data averaged 25,276. Both Eastern and Prairie coal fields shared in the gains.

In *metallic ores,* the level of employment was rather lower, the index at 147.1, averaging four points below that for 1925. The staffs of the reporting firms averaged 10,286 during the year under review. When the operations planned in the newly prospected areas are established, employment in metallic ore mines may be expected to show important advances.

Non-metallic minerals (other than coal) registered increased employment, an upward movement being recorded during the greater part of the year. The index averaged 102.1, as against 93.7 in the preceding year; a mean payroll of 6,284 persons was employed by the co-operating firms. Quarries, asbestos mines and other divisions coming under this heading reported considerable activity.

Communication

Telegraphs and telephones showed substantial advances during 1926; the index averaged 116.0, or almost five points higher than in 1925, when employment was better than in 1924. The working forces of the companies furnishing data averaged 24,128 persons, of whom about 20 per cent were telegraph employees. The improvement was general throughout the Dominion.

Transportation

Heavy seasonal losses were shown in the first three months of the year, followed by steady expansion until the beginning of October; the index averaged 108.0, as compared with 104.6 in 1925. The transportation companies furnishing data employed, on the average, 109,372 workers, or between 13 and 14 per cent of the total number covered by these statistics throughout the Dominion.

Street railways and cartage, reporting an average payroll of 19,108 persons, were more active on the whole than in 1925, although there was a slight falling off during the autumn and winter. The index averaged 113.4, compared with 111.8 in the preceding year.

In the *steam railway division,* improvement over 1925 and 1924 was indicated, but the number employed was not quite as large as in 1923. The index averaged 98.9 in 1926, or over three points higher than in the preceding year; at its peak on October 1 it stood 105.9, whereas the highest point reached in 1925 was 100.1, on the corresponding date. An average working force of 76,356 persons was recorded in steam railway operation.

Employment in *shipping and stevedoring* was active, though the index was lower towards the close of the year than in 1925. It averaged 197.9, and the reported payrolls averaged 13,658, varying between 9,966 on March 1 and 16,144 at the beginning of October. In the preceding year, the mean index was 185.2.

Construction and Maintenance

Greater expansion than in any previous year of the record was indicated by the construction industries in 1926. During the period of most pronounced activity, from March 1 to August 1, over 64,000 persons were added to the staffs of the co-operating contractors, whose payrolls averaged 83,141 during the 12 months. The general index for this group averaged 161.6, compared with 138.4 in 1925, the previous high level of this record. The working forces varied between 51,050 on February 1 and 115,196 at the beginning of August.

Building construction gained steadily from April 1 to September 1, but was comparatively brisk in every month. A mean index of 157.4 in 1926 compared with the average of 121.1 in the preceding year. The average persons employed by the reporting contractors numbered 30,098. As already mentioned in the case of logging, there is a growing tendency on the part of the larger contractors to sublet their contracts by trades to sub-contractors who usually employ a comparatively small number of workers. Where they have less than 15 employees, they are not required to furnish data on employment, so that the number employed in building is probably considerably in excess of that covered in these statistics.

Road construction reported many additions to staffs during the summer, when the number employed was higher than in any other of the last seven years. The payrolls registered averaged 13,341, and ranged between 3,014 on Mar. 1 and 26,071 at the beginning of August.

Employment in *railway construction*, (in which the working forces covered averaged 39,700) attained a greater volume than in any other year of the record, which was instituted in 1920. The index averaged 126.2, while in 1925 the mean was 111.9, and in 1923, the previous high level, it was 123.7.

Services

Statements were received monthly from over 175 firms in this division, with payrolls averaging 14,612. Steady gains were noted from January until August, succeeded by seasonal declines until the end of the year. Employment in hotels and restaurants was very active during 1926, partly as a result of the tourist trade, while improvement was also shown in other divisions. The index number averaged 119.1, compared with 114.2 in 1925; this was considerably higher than in any other year of the record.

Trade

Employment in trade was more favourable than in any other year since 1920; the index number was higher in every month of 1926 than in the corresponding month of previous years of the record. Both *retail* and *wholesale trading establishments* shared in the gains, which were fairly well distributed over the country. There was uninterrupted expansion from March until the end of the year. The payrolls of the co-operating firms averaged 58,932, and the index 100.0, as compared with 95.8 in 1925.

Table III gives index numbers of employment by main industrial divisions since 1922, while the trend of employment during 1926 in some 60 industries are shown in Table 4. The columns headed "relative weight" show the proportion that the number of employees in the indicated industry, is of the total number of employees reported in Canada by the firms making returns on June 1 and Dec. 1, 1926.

EMPLOYMENT OFFICE REPORTS FOR NOVEMBER, 1926

A DECREASE of 27 per cent in the volume of business transacted was reported by the offices of the Employment Service of Canada during the month of November, 1926, due to curtailment in placements in all industrial groups except logging, which showed a substantial gain. Of the reductions, that in farming was the most pronounced, due to seasonal slackening of activities in this group. An increase of over 5 per cent, however, was recorded when the records were compared with the average daily placements effected during November, 1925. This was due for the most part to increased placements in the logging industry, though construction, services and trade also contributed their quota in the gains registered.

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that although the curves of vacancies and placements in relation to applications declined sharply throughout the first half of the month, at the end of November the levels maintained by both were several points higher than those shown at the close of the corresponding period of 1925. The ratio of vacancies to each 100 applications was 69.5 and 68.2 during the first and second half of November, 1926, in contrast with the ratios of 70.7 and 63.3 during the same periods in 1925. The ratios of placements to each 100 applications during the periods under review were 67.5 and 64.4 as compared with 68.5 and 58.5 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of November was 1,845 daily as compared with 1,720 daily during the preceding period, and 1,813 daily during the corresponding period in 1925. Applications for work during the latter half of the month registered 1,600 daily in contrast with 1,595 daily during the latter half of November a year ago.

Employers notified the Service of a daily average of 1,281 vacancies during the first half and 1,091 during the latter half of the month under review as compared with a daily average of 1,282 and 1,010 vacancies during the month of November, 1925. Vacancies offered to the Service during the latter half of October, 1926, averaged 1,410 daily.

The Service effected a daily average of 1,246 placements during the first half of November, of which 844 were in regular employment and 402 in work of one week's duration or less, as compared with total average placement

during the preceding period of 1,320 daily and with 1,242 daily during the first half of November, 1925. During the latter half of the month under review placements averaged 1,031 daily (725 regular and 306 casual) as compared with an average of 934 daily during the corresponding period in 1925.

During the month of November, 1926, the offices referred 29,843 persons to vacancies and effected a total of 28,338 placements. Of these the placements in regular employment numbered 19,547, of which 16,167 were of men and 3,380 of women, while placements in casual work totalled 8,791. Opportunities for employment reported by employers numbered 21,456 for men and 8,095 for women, a total of 29,551. The number of applications for work was 42,917, of which 32,310 were from men and 10,607 from women.

The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926 (11 months)	284,686	100,802	385,488

Nova Scotia

There was an increase of nearly 16 per cent in the number of positions offered through offices in Nova Scotia during November, when compared with the preceding month, and a gain of over 38 per cent in comparison with the corresponding month of 1925. Placements were nearly 14 per cent higher than in October, and exceeded the total for November, 1925, by nearly 39 per cent. All industrial groups except construction and maintenance and finance participated in the gains in placements over November, 1925, those in services being the most noteworthy. Placements by industrial divisions included manufacturing 124; logging 92; construction and maintenance 56; trade 78; aand services 289, of which 213 were of household workers. During the month 211 men and 95 women were placed in regular employment.

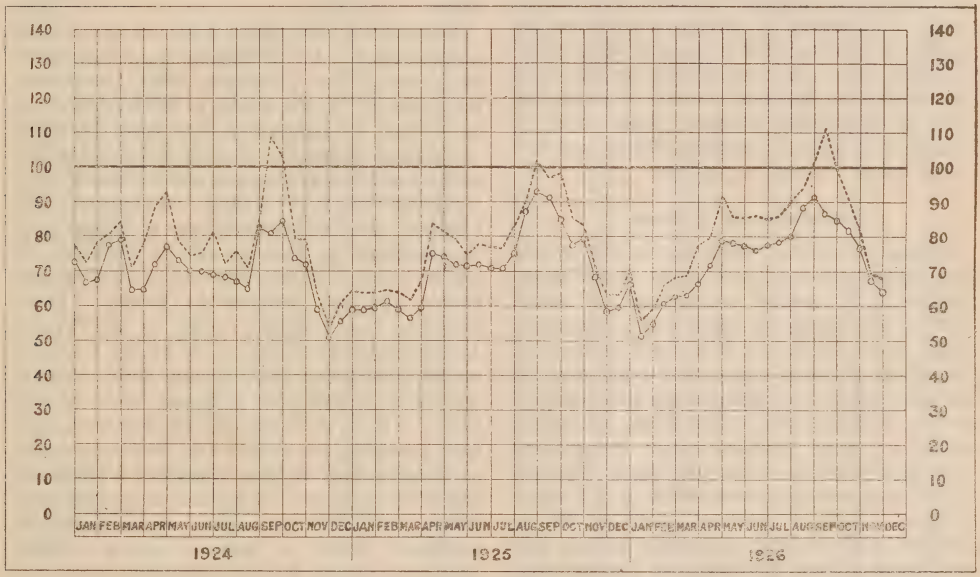
New Brunswick

Employment opportunities as indicated by orders listed at offices in New Brunswick during November were nearly 3 per cent less than during the preceding month, but almost 18 per cent better than in the corresponding month of 1925. Placements were over 4 per cent higher than in October and nearly 16 per cent above November, 1925. Increased placements in the logging industry were mainly responsible for the gains over the corresponding month of 1925, although more placements were also made under services and construction and maintenance. Placements in sawmills were lower than in 1925. Industrial groups in which most of the placements were effected during the month were logging 184; construction and maintenance 64; and services 520, of which 283 were of household workers. Placements in regular employment numbered 301 of men and 86 of women.

Quebec

During the month of November positions offered through Quebec offices declined over 18 per cent from the preceding month, but were over 5 per cent higher than during the corresponding month of 1925. Placements over 18 per cent lower than in October, but over 9 per cent higher than during November, 1925. Placements in logging and construction and maintenance were considerably higher during the same month of the preceding year, but were offset in part by declines in the manufacturing industries and services. Industrial groups in which most of the placements were effected during the month were manufacturing 87; logging 1,029; construction and maintenance 760; and services 492, of which 318 were of household workers. During the month 2,095 men and 397 women were placed in regular employment.

Ontario



There was a decline of over 14 per cent in the number of positions offered through employment offices in Ontario during November when compared with the preceding month, but a gain of over 11 per cent in comparison with the corresponding month 1925. Placements were 12 per cent less than in October but nearly 11 per cent higher than in November, 1925. Increased bush placements were mainly responsible for the gains over November, 1925, although transportation and services also showed improvement. Placements by industries during the month included manufacturing 1,279; logging 2,981; farming 810; transportation 739; construction and maintenance 2,029; trade 332; and services 3,099, of which 1,934 were of household workers. Regular employment was secured for 6,625 men and 1,192 women during the month.

MANITOBA

The demand for workers as indicated by orders listed at offices in Manitoba during November declined over 30 per cent when compared with the preceding month, but was over 41 per cent higher than during the corresponding month in 1925. There was a decrease of 22 per cent in placements in comparison with October, but an increase of over 39 per cent when compared with November, 1925. All industrial divisions participated in the gains in placements over November, 1925, in 1925. The reduction in placements from November, 1925, was almost entirely due to fewer calls for bush workers, as all groups except logging showed small change under this comparison. Industrial groups in which most of the placements were effected during the month were manufacturing 82; logging 853; farming 948; construction and maintenance 178; and services 780, of which 528 were of household workers. Placements in regular employment numbered 1,959 of men and 400 of women.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

those in farming logging and trade being the most pronounced. Placements by industrial groups included manufacturing 190; logging 1,179; farming 1,129; construction and maintenance 179; trade 416; and services 1,692, of which 1,250 were of household workers. During the month 2,355 men and 627 women were placed in regular employment.

SASKATCHEWAN

During November offices in Saskatchewan received orders for over 48 per cent less workers than in October and nearly 11 per cent less than in November, 1925. Placements during November were nearly 38 per cent lower than in the preceding month and over 3 per cent below the corresponding month

ALBERTA

Orders listed at Alberta offices during November called for nearly 70 per cent less workers than in October and over 17 per cent less than in November, 1925. Placements were over 68 per cent lower than in the preceding month and nearly 17 per cent lower than during November, 1925. Reduced farm placements accounted for the declines from the preceding year, but the reductions in this group were partly offset by gains under services and construction and maintenance. The changes in other groups were small. Industrial divisions in which most of the placements were effected during the month were manufacturing 175; logging 470; farming 609; mining 179; construction and maintenance 364; trade

123; and services 709, of which 501 were of household workers. Regular employment was procured for 1,743 men and 340 women during the month.

BRITISH COLUMBIA

Opportunities for employment as indicated by orders listed at offices in British Columbia during November were nearly 33 per cent less than during the preceding month, but were nearly 11 per cent better than in the corresponding month of 1925. Placements were nearly 33 per cent below October, but nearly 10 per cent higher than during November, 1925. Increased placements in the manufacturing industries and transportation were mainly responsible for the gains over November, 1925, as the changes in other groups were small. Placements by industrial divisions included manufacturing 359; logging 386; transportation 260; construction and maintenance 316; trade 112; and services 818, of which 521 were of household workers. Placements in regular employment numbered 878 of men and 243 of women during the month.

Movement of Labour

During November, 1926, the offices of the Employment Service of Canada made 19,547 placements in regular employment of which 12,372 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 3,262 were granted the Employment Service reduced rate, 1,841 going to points within the same province as the despatching office and 1,421 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The Quebec offices issued certificates to 530 persons, 207 of whom went to points within the Province and 323 to points outside. Of those transferred provincially the Quebec office despatched 175 bushmen and one cookee to logging camps in the Quebec region. Hull sent 2 bushmen to points around Montreal and Montreal 29 bushmen within its own zone. The interprovincial movement from Hull included 51 bushmen going to logging camps around Cobalt, 96 to North Bay and 83 to Sudbury and from Montreal 93 bushmen went to employment around Sault Ste. Marie.

From the Ontario offices 747 persons travelled at the reduced rate, 736 to provincial points and 11 to other provinces. Of the latter Port Arthur transferred 7 railroad construction labourers to Hull and one farm worker to the Moose Jaw zone and Sudbury 3 general labourers to the Hull zone. Within the province 2 carpenters travelled from Sudbury and 22 building construction labourers, 2 painters and 2 general labourers from North Bay all to the Timmins zone. From Fort William 17 building construction labourers and one male hotel worker were sent to points within the Fort William zone; from Port Arthur 7 construction labourers went to employment within its own zone and from Windsor two die makers were transferred to Oshawa. The remaining 681 were bushmen for points around Sudbury, North Bay, Port Arthur, Fort William and Timmins, most of whom received transportation from the offices in the surrounding districts.

Manitoba offices issued 1,162 certificates for transportation, 186 provincial and 976 interprovincial. The Winnipeg office transferred the majority of the workers, 893 bushmen, 13 carpenters, 2 blacksmiths, one farm labourer, one engine hoistman, 13 lath wood cutters, 6 cooks, one housekeeper and one kitchen worker travelling to Port Arthur, 23 bushmen to Timmins, one farm housekeeper to Moose Jaw, one bushman to Yorkton and 12 farm labourers, one porter, 4 bricklayers, one farm housekeeper and one waitress to Regina. From Dauphin one bushman went to the Prince Albert zone. Provincially, Winnipeg transferred 94 farm labourers, 4 female hotel workers, one farm housekeeper and one cook to the Brandon zone, 30 bushmen, one fisherman, one farm labourer, one packer and two hotel cooks to Dauphin and 20 farm labourers, 6 bushmen, one hotel cook and one general to employment within the Winnipeg zone. In addition 23 bushmen went to lumber camps around Dauphin, 22 went from Brandon and one from Dauphin.

Transportation certificates issued by Saskatchewan offices numbered 589, of which 494 were granted to persons going to points within the province and 95 to other provinces. Within the province certificates were issued to 439 bushmen, 403 of whom were for the Prince Albert district and 36 for points in the vicinity of North Battleford. Of these, 258 were shipped by the Saskatoon office, 95 by Regina, 29 by Moose Jaw and 57 by Prince Albert. From Saskatoon 8 farm hands went to points within the Saskatoon zone, 2 farm hands to Prince Albert and 3 to North Battleford, from Regina one farm hand was transferred to Prince Albert, 2 to Saskatoon, one to Moose Jaw one to Weyburn, one to Yorkton and 7 to Regina and from Moose Jaw one farm labourer was despatched to each of the Swift

* 13 placements effected by offices since closed.

Current and Moose Jaw zones. Saskatoon received one labourer and Estevan 4 coal miners from Regina. Moose Jaw issued transportation to 5 teamsters and Prince Albert to one saw filer and one handyman travelling to points in their respective zones and Moose Jaw in addition sent 2 labourers to Regina. The remainder were 13 hotel and household workers for various provincial points. Of those going without the province 37 bushmen were shipped to Dauphin, 36 from Saskatoon and one from Prince Albert and 55 bushmen went to points in the Fort William zone, the majority recruited by the Saskatoon and Regina offices. Two farm labourers travelled to the Edmonton zone, one from Saskatoon and one from Regina and from Swift Current one carpenter went to employment in Calgary.

In Alberta 150 certificates were granted, 135 to persons going to provincial points and 15 to other provinces. From Edmonton 2 farm labourers were sent to Lethbridge, one cook, 5 stone masons and 6 carpenters to Calgary, one engineer to Medicine Hat and 7 carpenters, 7 mine workers, 16 labourers, one electrician, 33 bushmen, 4 engineers, 10 farm labourers, one machinist, 2 porters, 2 mill hands, one handyman, one bookkeeper, 4 teamsters, one fireman, one canthook man, one dairy man, one track foreman, 6 household workers to employment within the Edmonton zone; Calgary transferred 2 cooks, one farm hand, one dairyman, and 3 bushmen to the Edmonton zone, one cook to Lethbridge, 3 farm hands and one mechanic to Drumheller and 3 female hotel workers, 2 housekeepers, one cook and 3 farm labourers within the Calgary zone. The movement to other provinces included from Edmonton 8 bushmen travelling to the Fort William zone, 5 farm hands to Saskatoon and one farm hand to North Battleford and from Calgary one auto glove maker to the Vancouver zone.

The British Columbia offices granted certificates to 84 persons, one of whom was a female cook sent from New Westminster to Saskatoon and the remainder were persons going to employment in various parts of the province. Vancouver transferred 6 miners, one flunkey and one machinist to Penticton, 10 carpenters and 6 bricklayers to Nelson, 2 plumbers and one flunkey to Kamloops, one cook to Revelstoke, one engineer to Prince George and one housekeeper, one miner and one cook to points in the Vancouver zone. In addition, one farm hand travelled from Nelson, one labourer from Penticton, 31 bushmen and one cook from Prince George and 17 bushmen from Prince Rupert, all to points within their respective zones.

Of the 3,262 workers who benefited by the Employment Service reduced transportation rate 2,461 were carried by the Canadian National Railways, 736 by the Canadian Pacific Railway, 57 by the Temiskaming and Northern Ontario Railway, 4 by the Edmonton, Dunvegan and British Columbia railway, 3 by the Pacific Great Eastern and one by the Kettle Valley Railway.

BUILDING PERMITS ISSUED IN CANADA IN NOVEMBER, 1926

THERE was a seasonal decline in the value of the building permits issued during November as compared with October, but the total was considerably higher than in the corresponding month of 1925. Sixty-three cities authorized building valued at $9,968,937, as compared with $14,614,543 in the preceding month and $7,988,765 in November, 1925. The decrease in the first comparison was $4,645,606 or 31.8 per cent, while the increase in the latter, more significant comparison totalled $1,980,162 or 24.8 per cent.

Some fifty cities furnished detailed statements showing that they had issued over 1,000 permits for dwellings estimated to cost nearly $5,300,000, and more than 2,000 other buildings valued at approximately $4,200,000. In October, the construction of about 1,300 dwellings and nearly 2,900 other buildings was authorized at the estimated cost of approximately $6,500,000 and $7,700,000, respectively.

There were reductions in all provinces as compared with October, 1926, those of $2,066,077 or 40.7 per cent in Quebec and $1,504,542 or 21.9 per cent in Ontario being most pronounced.

Increases were recorded in all provinces as compared with November, 1925, Ontario reporting the greatest gain of $1,381,927, or 34.8 per cent.

Montreal, Toronto, Winnipeg and Vancouver showed losses as compared with the preceding month, but increases over November, 1925. In Westmount, Brantford, Chatham, Fort William, London, St. Catharines, Lethbridge, Kamloops and South Vancouver, there were gains in both comparisons.

Cumulative Record for First Eleven Months, 1926.—The following table gives the value of the building authorized by 63 cities during November and in the first eleven months of each year since 1920. The January-Novem-

ber average index numbers of wholesale prices of building materials in those years are also given (1913=100).

Year	Value of Permits Issued		Average Indexes of Wholesale Prices of Building Materials in First Eleven Months
	In November	In First Eleven Months	
	$	$	
1926	9,968,937	144,831,781	149·3

1922	11,182,030	138,698,005	162·0
1921	12,192,414	111,257,084	185·0
1920	5,627,949	112,175,268	215 3

The January-November total for 1926 was 23.1 per cent higher than in the same months of 1925; it was also 4.4 per cent greater than in 1922, the previous high level, and 30.2 per cent higher than in 1921, when building was at its lowest level since the end of the war. The cost of building, as indicated by the average of index numbers of wholesale prices of building materials, has been lower in 1926 than in any other of the last seven years.

The accompanying table gives the value of the building permits issued by 63 cities during October and November, 1926, and November, 1925. The 35 cities for which records are available since 1920 are marked with asterisks.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding various contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed.

The contracts (Group "A") awarded in connection with the works of construction, etc., contained the general fair wages clause, which is as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

A contract for interior fittings ("B" Group) was also awarded by the Department of Public Works. This contract contained the general fair wages clause and other conditions for the protection of the labour employed in its execution, as sanctioned by the Fair Wages Order in Council as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council is as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents con-

taining such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF PUBLIC WORKS

Contract in "A" Group

Reinforcement of the dam at Woodwards Slough, Fraser River, New Westminster District, B.C. Name of Contractors, "The Fraser River Pile Driving Company, Limited," New Westminster, B.C. Date of contract, December 22, 1926. Amount of contract, Unit prices; approximate expenditure, $35,998.72.

Contract in "B" Group

Supply and installation of interior fittings (in oak) in the Public Building at Wiarton, Ontario. Name of contractor, "The Interior Hardwood Company, Limited," Kitchener, Ontario. Date of contract, December 20, 1926. Amount of contract, $1,385.

DEPARTMENT OF RAILWAYS AND CANALS

Contract in "A" Group

Taking down and rebuilding a portion of the southeast retaining wall of the Cornwall Canal at the Cornwall Swing Bridge. Name of contractor, R. C. Sutherland, Ottawa, Ontario. Date of contract, December 30, 1926. Amount of contract, schedule rates.

POST OFFICE DEPARTMENT

The following is a statement of payments made in December, 1926, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	2,925 67
Making and repairing rubber stamps, daters, etc	243 85
Making up and supplying letter carriers' uniforms, etc	11,384 24
Stamping pads, ink, etc	338 42
Bag Fittings	6,134 78
Cotton duck for mail bags	22,606 06
Scales	87 10

THE EIGHT-HOUR DAY IN CANADA

Hours of Labour in Manufacturing Establishments, Census of Industry, 1924

A TABLE is presented herewith indicating the hours of labour in all manufacturing establishments throughout Canada, as ascertained in the Census of Industry for 1924. taken by the Dominion Bureau of Statistics in 1925, the figures being issued in 1926. Summary tables of this census for the manufacturing group of industries appeared in the LABOUR GAZETTE for October, 1926, pp. 998 and 999. The accompanying table indicates the extent to which the 8-hour working day prevails in this important branch of Canadian industry, showing the number of persons who are working 8 hours or less per day as well as those who are working longer hours.

The Treaty of Peace signed at Versailles, June 28, 1919, between the Allied and Associated Powers and Germany provided in Part XIII for the organization of the establishment of the International Labour Organization (League of Nations), and the acceptance of certain general principles for regulating labour conditions of which the fourth was "The adoption of an eight-hour day or a forty-eight-hour week as the standard to be aimed at where it has not already been attained."

At the first session of the International Labour Conference, held in Washington in October and November, 1919, a draft convention limiting the hours of work in industrial undertakings to eight in the day and forty-eight in the week was adopted for communication to the countries which were members of the International Labour Organization (LABOUR GAZETTE, December, 1919, p. 1425). "Industrial undretakings" were stated to include mines, quarries, etc., manufacturing establishments, construction, and transportation including loading and unloading. For the information of this Conference the Department of Labour secured reports from some 6,250 employers in Canada as to the hours of labour of their employees and summary tables showing the results were prepared for consideration at the Conference. These were published in the LABOUR GAZETTE for January, 1920, p. 46, and a summary table is included here also. This inquiry showed that nearly fifty per cent of the employees covered were working eight hours per day or less.

In September, 1923, a conference was held between representatives of the Dominion and Provincial Governments for the consideration of the obligations of Canada arising out of the labour sections of the Treaty of Peace, the first item on the agenda being the draft convention as to the eight-hour day and the forty-eight-hour week (LABOUR GAZETTE, October, 1923, p. 1107). It was agreed that the Federal Department of Labour should make a further survey to ascertain to what extent the eight-hour day was in force in industrial undertakings in Canada. The Minister of Labour accordingly arranged with the Dominion Bureau of Statistics to secure from some 6,000 of the larger employers of labour in Canada statistics on this subject. A summary table of the result was prepared in due course and was submitted to the Committee of the House of Commons on International and Industrial Relations in 1924. (LABOUR GAZETTE, June, 1924, page 476.) The figures were subsequently revised by the inclusion of returns later received relating chiefly to certain railways and coal mines, and the table so revised is given herewith, and shows that in 1923 slightly over fifty per cent of the employees included in the inquiry were working eight hours per day or less.

As these last mentioned returns were obtained from only a part of the employers in the various industries, it was arranged with the Dominion Bureau of Statistics that in the next annual census of industry, viz., that for 1924, all manufacturing establishments would be asked to furnish data as to the number of employees working eight hours per day or less, also nine, ten and over ten hours per day. The data resulting has been compiled by the Bureau and is given herewith.

The employers were asked to give the figures for the month of highest employment so that in seasonal industries, such as fruit and vegetable canning, the figures would be representative of conditions when most work is carried on. The table of results in detail shows in the last column the average number of persons employed in each industry throughout the twelve months of the year. The number of employees for whom figures as to hours worked are given is, therefore, greater than the average for the year. It will be seen, except in fruit and vegetable canning and a small number of such seasonal industries, there is little difference between the average number employed throughout the year and the number employed in the month of greatest activity. Some of the industries were not covered by the inquiry as in the annual census

of industry these are covered by different schedules and these had been prepared before the arrangement of securing figures as to hours of labour had been made; it will be seen, however, that the number of employees in these is small.

The industrial census for 1924 covered some 40,000 establishments employing 501,724 persons, whereas in the less extensive inquiry in October, 1923, only some 3,000 manufacturing establishments were covered, these employing 326,557 persons, or about 60 per cent of all employees in manufacturing. The percentage of employees on the eight-hour day or less is, however, approximately the same, namely 37.3 per cent for the 3,000 larger establishments compared with 33.5 per cent for all establishments. It will be seen that the eight-hour day is most in vogue in manufacturing in the non-ferrous metal products group, 55 per cent, and that the textiles group shows the next largest proportion, namely 39.1 per cent.

The figures for the 1923 survey, covering all industries except agriculture, fishing, hunting, etc., like those of that in 1919, show that approximately half of the employees were working eight hours per day or less, the proportion in transportation and mines being very large in 1923, namely 85.2 per cent and 75.9 per cent respectively. In communication and trade the proportion is also high but the number of employees is not so large as in the mining and transportation groups. The figures for the trade group and the construction group, being from only those employers with fifteen or more employees, do not cover a very great proportion of the employees in those industries.

PRICES, RETAIL AND WHOLESALE, IN CANADA, DECEMBER, 1926

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher due chiefly to seasonal changes, while the Dominion Bureau of Statistics index number of wholesale prices was slighly lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.18 at the beginning of December, as compared with $11.01 for November; $11.56 for December, 1925; $10.58 for December, 1924; $10.73 for December, 1923; $10.39 for December, 1922; $11 for December, 1921; $14.84 for December, 1920; $16.92 for June, 1920 (the peak); $13.65 for December, 1918; and $7.96 for December, 1914. Eggs showed a substantial seasonal increase, while less important increases, also mainly seasonal, occurred in the prices of milk, butter, potatoes, rolled oats, sugar and beans. The most important declines occurred in the prices of beef, mutton, fresh and salt pork, bacon, lard, fish, flour and rice. Including the cost of fuel and rent with that of foods the total budget averaged $21.41 at the beginning of December as compared with $21.24 for November; $21.87 for December, 1925; $20.90 for December, 1924; $21.21 for December, 1923; $20.97 for December, 1922; $21.49 for December, 1921; $25.67 for December, 1920; $26.92 for July, 1920 (the peak); $21.64 for December, 1918; and $14.26 for December, 1914. Fuel was slightly higher due to increases in the prices of bituminous coal and hardwood. Rent was slightly lower.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was slightly lower at 150.5 for December, as compared with 151.5 for November; 163.5 for December, 1925; 160.9 for December, 1924; 153.5 for December, 1923; 153.1 for December, 1922; 150.6 for December, 1921; 217.2 for December, 1920; 256.7 for May, 1920 (the peak); 223.4 for December, 1919; and 205.6 for December, 1918. Fifty-one price quotations were lower, thirty were higher, and one hundred and fifty-five were unchanged.

In the grouping according to chief component materials three of the eight main groups declined, three advanced, while two remained unchanged. The Vegetables and their Products group was substantially lower, mainly because of lower prices for grains, flour and other milled products, and potatoes. Decreases in the prices of copper, lead, silver, tin and spelter caused a decline in the Non-Ferrous Metals and their Products group. The Fibres, Textiles and Textile Products group was also slightly lower. The groups which advanced were: the Animals and their Products group, due mainly to advances in the prices of live stock, butter and eggs; the Iron and its Products group, because of advances in the prices of steel billets; and the Wood and Wood Products group. The Non-Metallic Minerals and their Products group and the Chemicals and Allied Products group were unchanged.

In the grouping according to purpose both consumers' goods and producers' goods declined, the former due to lower prices for flour, oat meal, rolled oats, coffee, apples, oranges, hog products and potatoes, which more than offset increases in the prices of tea, halibut, butter, eggs and sugar; and the latter due mainly to declines in the prices of materials for the milling and for the metal working industries. Materials for the fur and for the meat packing industries, as well as for miscellaneous producers' materials, advanced.

In the grouping according to origin raw or partly manufactured goods declined, lower prices for wheat, potatoes, hogs, oranges, oats and non-ferrous metals more than counterbalancing the higher prices for eggs, raw sugar, steel billets, cattle, hay, tobacco and tea. Fully or chiefly manufactured goods advanced slightly, prices for granulated sugar, butter, hessian, cast iron pipe and shorts advancing, while the prices of flour and milled products, round and square steel bars, cotton bags and canned tomatoes were lower. Domestic farm products and articles of marine origin declined. Articles of forest origin were slightly higher, while articles of mineral origin were unchanged.

The Canadian Bank of Commerce index number of imports advanced to 153.65 for December, as compared with 153.14 for November. That for exports declined to 147.47 for December, as compared with 150.69 for November. The combined index of both imports and exports was lower at 150.56 for December, as compared with 151.91 for November.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, was somewhat lower for December at 170.1 as compared with 172.3 for November;

185.2 for December, 1925; 217.4 for December, 1920; and 118.6 for December, 1914. The index for twenty foodstuffs, as well as that for twenty manufacturers' goods, declined.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the prinicpal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of December of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget of the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

(Continued on page 116)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA*

cord from price quoted. d. Welsh coal. e. The higher price for Welsh coal. g. Natural gas used extensively. h. Lignite. published (in bulk). k. New houses as high as $40.00 per month. m. For new tenants $30–$35 and $20–$25. n. Houses with r. Company houses $10–20, others $30–$35. s. Delivered from mines.

(Continued from page 108)

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of

Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and 1925, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics:—Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows:—1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

The decline in the prices of beef continued, lower levels being recorded in most localities. The movement, however, was more pronounced in Ontario and Quebec than in the Eastern and Western Provinces where prices were more stable. Sirloin steak averaged 28.4 cents per pound in December, as compared with 28.8 cents in November and 29.5 cents in October; rib roast 21.3 cents per pound in December, 21.6 cents in November and 22 cents in October; shoulder roast 15.6 cents per pound in December, 15.7 cents in November and 15.9 cents in October. The price of veal averaged slightly higher at 19.8 cents per pound. Mutton fell from an average of 29.2 cents per pound in November to 28.6 cents in December. Both fresh and salt pork declined, the former averaging 28.7 cents per pound in December and 29.8 cents in November, and the latter averaging 27.1 cents per pound in December and 27.9 cents in November. Prices in most localities averaged lower. Bacon was down from an average of 43.5 cents per pound in November to 42.6 cents in December, and ham from 64.5 cents per pound in November to 63.3 cents in December. In fresh fish cod steak, halibut and white fish advanced slightly. Lard was lower in most localities at an average price of 23.6 cents per pound in December, as compared with 24.4 cents in November and 24.5 cents in October.

Eggs showed a substantial seasonal advance, fresh averaging 64.9 cents per dozen in December, as compared with 56.1 cents in November and 49.8 cents in October; and cooking averaging 50.8 cents per dozen in December, 48.2 cents in November and 44.3 cents in October. Prices were higher in practically all localities. Milk averaged somewhat higher at 12.1 cents per quart. Prices advanced in Charlottetown, Guelph, Cobalt, Medicine Hat, Edmonton, Calgary, Lethbridge and Prince Rupert. Butter was higher in most localities, dairy averaging 39.5 cents per pound, as compared with 38 cents in November, and creamery averaging 43.2 cents per pound, as compared with 41.4 cents in November. Cheese was slightly lower at 30.4 cents per pound.

Bread was unchanged in the average at 7.6 cents per pound. An increase, however, was reported from Drumheller. Soda biscuits were steady. Flour was slightly lower at 5.2 cents per pound. Rolled oats rose from an average of 5.8 cents per pound in November to 6 cents in December. Rice was slightly lower at 10.8 cents per pound. Canned vegetables showed little change. Beans were slightly higher at 8.1 cents per pound in the average. Potatoes advanced from an average of $1.92 per ninety pounds to $2.04. Higher prices were reported from nearly all localities, the increase being more pronounced in Ontario and the Eastern provinces than in the Western. Evaporated apples and prunes showed little change. Raisins were slightly lower at an average price of 18.6 cents per pound. Currants also declined averaging 18.2 cents per pound, as compared with 18.6 cents in November. Both granulated and yellow sugar advanced in the average, the former at 8.1 cents per pound in December, as compared with 7.9 cents in November, and the latter at 7.7 cents per pound in December, as compared with 7.5 cents in November. Coffee and tea were steady. Little change occurred in anthracite coal, the price averaging $16.83 per ton. Bituminous coal was slightly higher at an average of $10.46 per ton. Coke was unchanged. A decline in rents was reported from Toronto, while a slight advance occurred at Brantford. No other changes were reported.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month, issued by the Dominion Bureau of Statistics.

Wheat prices moved downward in December, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging $1.33½ per bushel, as compared with $1.41 in November. The low price for the month was $1.29⅝ per bushel on the 14th and the high $1.37 toward the end. Lack of export demand, together with reports of large crops from Australia and the Argentine were said to be the cause of lower levels during the month. Western oats declined from an average of 59⅜ cents per bushel to 56 cents; and flax seed from $1.91 per bushel to $1.88. Western barley was little changed at 63.6 cents per bushel. Ontario oats advanced from 49⅓ cents per bushel to 51⅔ cents, and American corn from 84 cents per bushel to 89 cents. Flour followed the movement in wheat the price declining from $8 per barrel to $7.93. Rolled oats was down from $3.60 per ninety-pound sack to $3.35. Shorts advanced from $32 per ton to $33.05. Raw sugar advanced from $4.14 per hundred to $4.70 and granulated from $5.98½ per hundred to $6.50¾. Oranges were down from $7-$7.50 per case to $4.25-$5. Coffee declined 1 cent per pound to 24 cents, while tea was slightly higher at 51 cents per pound. Potatoes at Montreal declined from $1.65 per bag to $1.47; Ontario potatoes at Toronto from $1.95½ per bag to $1.74; and Manitoba potatoes at Winnipeg from 81 cents per bag to 75-81 cents. The price for New Brunswick potatoes at St. John, however, advanced from $2.25-$2.50 per barrel to $3.15-$3.50. Rubber continued to decline, a grade of Ceylon being down from 40½ cents per pound to 38 cents. Rosin advanced from $18.25 per barrel to $19. Hay declined 50 cents per ton to $17, while straw advanced slightly to $11.05 per ton. Live stock markets for the most part advanced, Western cattle at Winnipeg being up from $5.65 per hundred pounds to $6.05; choice steers at Toronto from $6.35½ per hundred pounds to $6.66½; and choice sheep from $6.31½ to $6.40. Hog prices declined somewhat at Toronto, being $11.19 per hundred pounds, as compared with $11.28 in November. The decline in pork products continued, dressed hogs at Toronto being down from $17.81 per hundred pounds to $15.75; mess pork from $33.50 per barrel to $33; bacon from 32 cents per pound to 29 cents; and ham from 29-33 cents per pound to 23½-24 cents. Finest creamery butter at Montreal rose from 37 cents per pound to 42 cents, and creamery prints at Toronto from 39 cents per pound to 43 cents. New laid eggs advanced from 60-65 cents per pound to 68-70 cents. Mink skins rose from $18 per skin to $20 and musk rat from $1.45-$1.75 per skin to $1.50-$1.75. Raw cotton at New York averaged 12.7 cents per pound, as compared with 12.9 cents in November. The downward movement of the last few months was continued until the latter part of December when the price showed a tendency to rise. Wool was again lower, the price ranging from 26-28 cents per pound according to the grade. Ground wood pulp advanced from $28-$30 per ton to $30. Steel billets advanced from $29-$44 per ton to $39-$45. Non-ferrous metals for the most part were lower, copper declining from $15.75 per cwt. to $15.45; copper sheets from 21½ cents per pound to 21¼ cents; lead from $8 per cwt. to $7.80; tin from 71¼ cents per pound to 67¾ cents; zinc from $8.85 per cwt. to $8.60; and silver from 54½ cents per ounce to 53¾ cents.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The tables of index numbers published quarterly with this article as well as tables of index numbers of wholesale prices by groups and cost of living index numbers of the principal countries will be found in the Supplement to this issue of the LABOUR GAZETTE, "Prices in Canada and Other Countries, 1926.

Great Britain

The Board of Trade index number for November, on the base prices in 1913=100, was 152.4, showing a fractional increase over the October figure, 152.1. Foods were almost unchanged on the whole, at 156.7, with a rise in cereals and declines in meat and fish and "other foods." Industrial materials showed a slight rise, there being an increase of 5.1 per cent in metals and minerals other than iron and steel, partially offset by a decline of 4.5 per cent in cotton.

The *Statist* index number (in continuation of Sauerbeck's figures), base period 1867-77

=100, was 130.8 on November 30, showing a decline of 1.6 per cent compared with the previous month. Foods fell 0.1 per cent, with a decline of 1.3 per cent in animal food and an increase of 3.7 per cent in sugar, coffee and tea. Materials decline 0.3 per cent, the principal change being a decline of 2.3 per cent in textiles. In November calculations, October figures were retained for average export price of coal, coke and manufactured fuel, and for the average import price of Russian flax.

Denmark

WHOLESALE PRICES.—The index number of the Department of Statistics, on the base 1913=100, was 170 in November, a decline of 4.5 per cent. This was due chiefly to a decline in the group fuel and lubricating oil, which had risen sharply during the month before. There was a considerable rise shown by the group lime, cement, bricks and glass, while other groups showed comparatively slight changes.

Spain

WHOLESALE PRICES.—The index number of the Director General of Statistics, on the base 1913=100, was 179 in October, a rise of one point. Foods rose 4 points owing to a rise in vegetable foods. Materials declined one point, with a marked decline in textiles and leather.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base average prices in 1913=100, was 148 in November, showing no change from the October level. There were slight increases in five groups and a decline in one group, with no change in the remaining groups.

India

WHOLESALE PRICES.—The index number of the Labour Office, Bombay, on the base July, 1914=100, was 147 in October, 2 points below the September level. Foods declined 5 points, with all groups somewhat lower. Non-foods declined one point with declines in oil seeds and cotton manufactures, an advance in hides and skins, and not much change in other groups.

COST OF LIVING.—The index number of the Labour Office, Bombay, on the base prices in July, 1914=100, was 154 for November, showing a decline of one point from the level maintained during the three previous months. Foods declined one point and clothing 3 points. Other elements of the budget showed no change.

New Zealand

WHOLESALE PRICES.—The official index number of the Government Statistician, on the base 1909-13=1000, was 1611 in October as against 1618 in September, a decline of 0.4 per cent for the month. Slight changes were shown by all groups.

United States

WHOLESALE PRICES.—Dun's index number (showing the cost per capita of a year's supply of commodities) was $187.758 on January 1, 1927, being practically identical with that of December 1, 1926. Four of the seven groups were lower, these being meats, dairy and garden products, "other food," and metals. These slight changes were a little more than offset in the breadstuffs, clothing and miscellaneous classes.

Bradstreet's index number of commodity prices (showing the cost of 106 commodities) was $12.8195 for January 1, 1927, two-tenths of one per cent above the number of December 1, 1926. There were slight increases in six groups, these being breadstuffs, provisions, fruits, hides and leather, oils, and the miscellaneous group; and declines in six groups, namely livestock, textiles, metals, coal and coke, naval stores, and building materials. Chemicals and drugs showed no change.

The *Annalist* weekly index number of wholesale commodity prices, on the base 1913 =100, was 145.8 in December, as compared with 148.1 in November, thus showing a decline of 1.6 per cent. All groups showed declines except food products, which rose slightly. The only marked change was a decline in the fuels group from 207.5 to 188.6, or 9.1 per cent. The figures are averages of weekly index numbers. The *Annalist* weekly index number of wholesale food prices, on the base average of 1890-1899=100, was 201.995 at the middle of December as compared with 199.617 at the middle of November.

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life of the cost of living in Massachusetts, on the base 1913=100, was 162.1 in November, showing a slight increase on the October level. There were slight advances in foods, fuel and light, and sundries, and a slight decline in clothing. Shelter remained unchanged.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Validity of Male Minimum Wage Order in British Columbia

The text is given below of the judgment handed down in the Appeal Court at Victoria, British Columbia by Chief Justice J. A. Macdonald and Mr. Justice W. A. Galliher, in the case *Rex versus Robertson and Hackett Sawmills Limited.* The various stages of this case have been noted in previous issues (December, page 1177; November, page 1045). The text of the judgment follows:—

Chief Justice J. A. Macdonald:

The prosecution is founded on the provisions of the Male Minimum Wage Act, chapter 32, of the Act of 1925, which enacts that every employer shall post up in his establishment a copy of the order of the Board fixing a minimum wage for his employees. It was for a breach of the Act, not for a breach of the order of the Board, that the applicants were convicted.

Their answer to the charge, the only one open to them, is, that the order was made without authority of the Act, and is therefore null and void. They submit that no obligation was imposed upon them by the Act to post up a piece of paper which in contemplation of law had no existence. The question for decision, therefore, is not whether the Board made the right order or the wrong order, but whether they had power to make the order, whether it were right or wrong. Mr. Farris, appellant's counsel, made two submissions in support of his contention, that the Board had no power to make any order in the terms of the one in question. He argued that they were authorized to fix a minimum wage for those engaged in "industries," and that the order is of the latter description. Secondly, he argued that the Board were authorized to fix a minimum wage only for all those engaged in an "occupation" throughout the Province, not for some of them merely.

I shall deal first with the latter contention, since in my opinion, the answer to it will determine the appeal.

The question, it will be borne in mind, is not whether the order is right or wrong, but whether it is or is not null and void. It is conceded that the Board has power to fix a minimum wage for those in occupations to which the act applies. It is also conceded that the Board is authorized to make an order that all those employees, for instance, engineers, blacksmiths, etc., throughout the Province shall receive not less than a stated wage. But it is denied that this may be done, as it were, piece-meal. It must be applied to all engineers, etc., irrespective of the particular industry to which they be attached for the time being. That is the appellants' contention. That contention, in my opinion goes only to the legality of the order, not to the powers of the Board to make it. The Board has power to make a general order. We will assume that they mistakenly made a limited one; that order may be wrong but not a nullity. The latter is the only question we are concerned with. The act itself, I think, contemplates successive orders and admits of the fixing of minimum wages for all employees engaged in occupations connected with particular industries. It would be difficult otherwise to give effect to the peculiar circumstance of separate employers contemplated by the act.

I now come to the first submission mentioned above, that the Board by the order complained of, without authority fixed a minimum wage to be paid to employees in an "industry," not of an "occupation." Agreeing with Mr. Farris, as I do, that the wage must have reference to the occupation, not to the industry, it becomes necessary to examine into its substance, which is the fixing of a minimum wage for all employees, whatever their several occupations may be, that is to say, trades or callings, connected with the lumbering industry, at forty cents an hour. True, it does not specify those occupations by name, but it includes them all in the forty-cent rate. Now whether or not that is a fair way of dealing with them, having regard to the different standards of wages, is not the question. The question is one of ultra vires or intra vires, not merely right or wrong.

I am satisfied that the Board had power to make the order in question, so that the conviction ought to be affirmed.

Whether or not they exercised their powers properly in the premises, I find it unnecessary to say. I do not wish to go beyond what is strictly necessary for the decision of this appeal. I would dismiss the appeal.

Mr. Justice Galliher's dissenting judgment:

I am of the view that the word "occupation" in the second line of clause 3 of the Minimum Wage Act, S.B.C., 1925, chap. 32, has reference to occupations of employees and not to industries in which the employer may be engaged. Section 13 of the Act would seem to strengthen that view.

Assuming this to be right, the Board are directed to fix a minimum wage for such employees in the manner provided in the Act.

The Board are further directed to make such inquiries as it deems necessary for the purposes of the Act by section 4, and section 5 enacts, (1) After inquiry the Board may by order establish a minimum wage for employees and may establish a different minimum wage for different conditions and times of employment.

Then there are other directions which do not affect the point raised here.

The Board proceeded under the Act, made certain inquiries and fixed a minimum wage for those employed in lumber industries only and objection is taken that they are in error in dealing with the Act piece-meal.

The point is, should the Board first proceed to make all inquiries relating to the employment of those engaged in different classes or occupations, fix a minimum wage for each class and then, or at the same time, if different conditions and times of employment require it in certain cases, fix a different minimum wage in those cases, or can they proceed as they did here, and fix a minimum wage for one industry before fixing any general minimum wage?

My view of the Minimum Wage Act is that the Board should first fix a minimum wage for a class of occupations, say a carpenter, a blacksmith, or a stationary engineer, so that not less than a stipulated wage may be paid to him in the carrying on of his occupation generally, no matter how favourable the conditions are, thus establishing a basis which shall be the minimum in that occupation, then having established that basis, the Board may, where the employee is engaged in his occupation, where the conditions are hazardous to life or health (to instance mining) or for other good reasons within the Act, grade up (if I may use the expressions) the minimum wage to the employee under such conditions.

Once you have established your minimum wage for an occupation you cannot grade down —if conditions call for it, it may be graded up and to grade up you must have a basis or foundation to start from.

I do not say it is not open to other construction, but the best consideration I can give it, leads me to the above conclusion. I would allow the appeal.

Master must Provide Safe Place of Work

A labour foreman employed by a contracting firm on the construction of a building sustained serious injuries through the breaking of a scaffolding under the weight of a hand-barrow loaded with heavy stones. He brought action against the contractors for damages, alleging negligence on their part in putting him to work on an unsafe scaffold. The trial jury found in favour of the plaintiff, allowing him general damages amounting to $20,000 and special damages to $1,758. The contractors appealed from this verdict, alleging that there was not sufficient evidence of negligence on their part; that there was contributory negligence on the part of the injured man, and that in any case the damages were excessive.

The Court of Appeal dismissed the appeal with costs, holding that the evidence was sufficient to support the findings of the jury. For the defence it was urged that the plaintiff himself was responsible for the construction of the scaffolding in question and for the quality of the planks used, and that the breakage was caused by being subjected to a special strain imposed upon it by the plaintiff. The Appeal Court found however that the evidence failed to prove contributory negligence on the plaintiff's part; moreover, the experience of the plaintiff in the construction of scaffolding was not of such a character as to warrant the superintendent of works in leaving the work of construction to him, and the contractors were therefore guilty of negligence in not having provided for sufficient inspection of the scaffold. "It is the duty of a master," the Court stated, "to see that his servants have a safe place in which to work. Moreover a master is not only responsible for failure to provide good and sufficient apparatus, but is also responsible for failure in seeing that that apparatus is properly used."

The objection was raised on the appeal that the trial jury had not been asked to consider the evidence in the light of the doctrine that there can be no blame attached to the employer when the injured man had voluntarily assumed the risk (*volenti non fit injuria*). "Defendant's counsel argued that the plaintiff had knowledge of the danger, and assumed the risk for larger reward, namely, that when he became labour foreman he had higher wages. The acceptance of the higher wages however did not involve an agreement on the part of the plaintiff to assume the risk of negligence on the part of the defendant in not providing sufficiently strong scaffolds or insufficient inspection. It was still the duty of the defendant to exercise reasonable care in furnishing a reasonably safe place where the plaintiff could perform his work, and even if the evidence warranted the conclusion—as it does not—that the plaintiff knew that the scaffold was unsafe for the load which it was called upon to carry, this knowledge was not sufficient to make the maxim applicable. *Sciens* (knowing) is not *volens* (willing). Even if the question as to the applicability of the maxim had been submitted to the jury, there was no evidence which would have warranted the jury in finding that the plaintiff had voluntarily undertaken the risk."

—(Saskatchewan—Lennox versus Smith Brothers and Wilson, Limited.)

Employer is Liable for Negligence of His Employee

A dealer in fruit had a truck which he used in the course of his own business (not however being in the truck business). Wishing to assist a relative in moving furniture he sent the truck, in charge of his son, to do the work. A workman, then unemployed, volunteered to accompany the truck and to help in loading and unloading the furniture, the understanding being that the owner of the truck would pay his expenses and bring him back. On the way to this work the truck was struck by a train while crossing a railway track and the workman was killed. His widow brought an action under the Fatal Accidents Act against the railway company and against the truck owner for the recovery of $4,000, the fatality being alleged to have been caused by the negligence of the defend-

ant's son. The trial jury found in favour of the plaintiff and allowed damages at $4,000 against the owner, but dismissed the action as against the railway company. This verdict was sustained on appeal by the owner of the truck. The Workmen's Compensation Act was not appealed to in the case, as, the workman's employment being of a casual nature, he came within the exception of section 3 (4); that is, he was "a person whose employment is of a casual nature and who is employed otherwise than for the purposes of the employer's trade or business." It was argued at the hearing that the case was one of master and servant, and as the Workmen's Compensation Act was not applicable, the common law rule that the common master is not liable to one of his workmen for the negligence of another, ought to prevail. The court held however, that the relation of master and servant did not exist between the truck owner and the workman in this case, so as to justify the application of the common law rule. The result was that the plaintiff was held to be entitled to recover damages against the owner for the negligence of his servant (i.e. his son) in the course of his employment.

Employee Justifiably Dismissed is not Entitled to Wages for Unexpired Period

A garage foreman engaged at a salary of $150 per month was dismissed by his employer for causes held by the court to be sufficient. The notice of dismissal, which took effect on December 30, 1925, informed him that he was being credited with $145, representing his remuneration for the 29 days he had worked in that month. He refused a cheque for this amount, claiming full salary for the month in which he was dismissed, together with certain sums due for the amount paid by him on shares of stock in the defendant company.

The claim was allowed by the trial court, but on appeal by the employer the Court of Appeal reversed that decision. The plaintiff contended that the employer, by crediting him with the $145 for December, and intimating that they were paying him for the time he worked in December, had waived their right to forfeit the December wages. The court held however that the law on this point was as stated in a British judgment as follows:—

"As regards his current salary . . . . the servant who is dismissed for wrongful behaviour cannot recover his current salary, that is to say, he cannot recover salary which is only to become payable . . . . . on the condition that he had fulfilled his duty as a faithful servant down to that date."

In the present case, the Court held, the faithful performance of his duties was a condition precedent to the obligation to pay the wages. That condition was not performed, and the wages therefore never became due. "Neither can an offer by the defendants to pay these wages be described as a waiver of their right to forfeit such wages. In a legal sense, there were no wages to forfeit and no forfeiture to waive."

—(Saskatchewan-Knight versus Ducklow Motors, Limited.)

Reasonable Notice Necessary for Terminating Contract of Hiring

A salesmanager, employed at a yearly salary of $5,000, payable monthly, was dismissed by his employer after ten months' service, with the offer of a payment of salary up to the end of twelve months. He brought action for damages for dismissal without reasonable notice. The County Court judge held that a reasonable notice in this case would be one of five months, and assessed the plaintiff's damage at $708.30. This judgment was sustained on appeal. For the employer it was contended that the hiring was automatically determined at the end of the second and each succeeding year, on the anniversary of the hiring, without any notice. The Court, however, found that the contract was for the definite term of a year, and afterwards for an indefinite period. "There is no foundation for the idea that after the definite period of hiring has ended and the relationship of master and servant been continued, this becomes a yearly hiring in the sense that the contract ends on the anniversary of the original hiring, without notice."

—(Ontario-Messer versus Barrett Company, Limited)

Communications made to Workmen's Compensation Board are Privileged

As noted in the LABOUR GAZETTE for November, 1926 (page 1173), the defendant in the case *Halls versus Mitchell* entered an appeal against the decision of the County Court. In this case the plaintiff was an employee of the Canadian National Railways. The Ontario Workmen's Compensation Board refused to allow him compensation for a condition of the eye known as iritis, acting

on the evidence of the medical director of the employing company, who claimed to have knowledge, acquired in the course of his medical practice, that the claimant's condition was due to his having at one time suffered from venereal disease. The claimant brought action for damages against the doctor, and the County Court judge found evidence of libel and slander, and allowed the plaintiff $700. On appeal the Appeal Court reversed the decision of the lower court. "No malice of any kind is to be found in the present case," the judgment stated; "the law in this case is in accordance with common sense, as it generally is when not bedevilled by the mediaeval subtlety of the ancient sages or by modern legislation."

—(Ontario-Halls versus Mitchell.)

Limit of Right to Strike in United States

A strike was called by miners in Kansas against a company which had refused to pay back wages alleged to be due to one of the miners. Dorchy, an official in the miners' organization concerned in the case, was later convicted in a Court of the State for inciting a strike in a coal mine in violation of the Kansas Industrial Relations Act, 1920 (LABOUR GAZETTE, March, 1920, page 300; May, 1920, page 551, etc.) On appeal to the State Supreme Court the case was remanded for a decision by the State Court as to the constitutionality of the section of the Act forbidding the calling of strikes in certain circumstances. (This action was suggested by a previous judgment declaring unconstitutional the compulsory arbitration features of the same law). The Supreme Court of Kansas declared to be valid those sections forbidding incitement to strikes with the intent of hindering operations, and making it a felony for a labour union official to use his office to bring about violation of the act. The judgment of conviction was therefore re-affirmed. This construction of the State law was challenged by the defense on the ground that the law was in effect a prohibition of strikes and was therefore a denial of the liberty guaranteed by the fourteenth amendment to the United States constitution. On this question the Supreme Court of the United States (through Mr. Justice Brandeis) held that the act, as construed and applied in this case, was not unconstitutional, and declared the following opinion:—

"The right to carry on business—be it called liberty or property—has value. To interfere with this right without just cause is unlawful. The fact that the injury was inflicted by a strike is sometimes a justification. But a strike may be illegal because of its purpose, however orderly the manner in which it is conducted.

"To collect a stale claim due to a fellow member of the union who was formerly employed in the business is not a permissible purpose. In the absence of a valid agreement to the contrary, each party to a disputed claim may insist that it be determined only by a court.

"To enforce payment by a strike is clearly coercion. The legislature may make such action punishable criminally, as extortion or otherwise.

"And it may subject to punishment him who uses the power or influence incident to his office in a union to order the strike. Neither the common law nor the fourteenth amendment confers the absolute right to strike."

The attorneys for the defence later filed a petition for re-hearing on the ground that the Supreme Court in making the foregoing decision was in error in regard to the facts on which the judgment was based.

Agreement to Exclude Non-Union Work Illegal in United States

The United States Supreme Court rendered judgment on November 20 in a case affecting the relations of union and non-union labour and their products. The decision declared that an agreement entered into by manufacturers, contractors and union to refuse to install any millwork made under non-union conditions to be a combination and conspiracy to restrain interstate commerce. The Court further declared that "there was evidence reasonably tending to show that such a combination was brought about, and that, as intended by all the parties, the so-called outside competition was cut down and thereby interstate commerce directly and materially impeded. The local manufacturers, relieved from the competition that came through interstate commerce, increased their output and profits; they gave special discounts to local contractors; more union carpenters secured employment in Chicago and their wages were increased. These were the incentives which brought about the combination."

Employers in Interstate Commerce may not Combine to Exclude Certain Employees

The International Seamen's Union recently applied to the United States Supreme Court for a ruling on the question of the legality

of employment offices established by the Shipowners' Association on the Pacific Coast. Under this system seamen were compelled to register in the employment offices, where they received certificates entitling them to be engaged by members of the association. The union alleged that its members were "black-listed" by these offices. Ship's officers were by the arrangement deprived of their ancient right to select their own seamen. The Supreme Court ruled that the employment offices interfered with interstate commerce and violated the Sherman Anti-trust act. The Supreme Court ruled as follows:—

"If the restraint thus imposed had related to the carriage of goods in interstate and foreign commerce—that is to say, if each shipowner had precluded himself from making any contract of transportation directly with the shipper and had put himself under an obligation to refuse to carry for any person without the previous approval of the associations—the unlawful restraint would be clear. But ships and those who operate them are instrumentalities of commerce and within the Commerce Clause no less than cargoes.

"Taking the allegations of the bill at their face value, as we must do in the absence of countervailing facts or explanations, it appears that each shipowner and operator in this widespread combination has surrendered his freedom of action in the matter of employing seamen and agreed to abide by the will of the associations. Such is the fair interpretation of the combination and of the various requirements under it, and this is borne out by the actual experience of the petitioner in his efforts to secure employment. These shipowners and operators having thus put themselves into a situation of restraint upon their freedom to carry on interstate and foreign commerce according to their own choice and discretion, it follows, as the case now stands, that the combination is in violation of the Anti-Trust Act."

The case was therefore remanded back to the court of first hearing for further proceedings in conformity with this opinion.

—*(Supreme Court of the United States, Anderson versus Shipowners' Association of the Pacific Coast.)*

Payment of Wages in Kind Not Legal

An appeal relating to payment in kind, the first under the Agricultural Wages (Regulation) Act 1924 (England and Wales) on the point raised, was decided recently in the Divisional Court. The Lord Chief Justice of England held that the Justices in Monmouthshire had been wrong in accepting the contention of a Monmouthshire farmer that he was entitled to pay the wages due under the Act in kind, namely, as board and lodging. The Lord Chief Justice held that board and lodging could not be reckoned as part of the wage, which must be paid only in cash. The decision is interesting as showing how far the payment of cash wages has replaced the system of mixed payment in England.

Effects of British Coal Strike on Workmen's Compensation

Since the recent dispute in the British coal mining industry several appeals have been heard in the English Court of Appeal in Workmen's Compensation cases where the coal strike was alleged by employers to lessen their obligations in the matter of payments of compensation for injuries. In these cases the injured workmen had been given light work by the same employers at wages substantially equal to those they had previously received. On the outbreak of the coal strike the employment was discontinued. The men claimed to be entitled again to compensation by reason of their partial incapacity. The County Court judge made awards in their favour, disregarding the amounts they had been earning. The employers contended that those amounts were excessive. The Court of Appeal held that the County Court judge was right, because there was no unwillingness on the part of the men to work and that the strike was a supervening fact which prevented the employers from mitigating the right to compensation given to the men by the Workmen's Compensation Act, 1925.

Undertakers under Workmen's Compensation in Quebec

The Superior Court at Montreal, in a decision early in December, ruled that funeral undertaking establishments were subject to the provisions of the Workmen's Compensation Act of Quebec. A workman employed by an undertaker had sustained an accident while carting hay for his employer, and the employer contended that the act did not apply to this occupation. The judgment stated that in this country it would be impossible to make any funeral arrangements without having recourse to carriages or motor vehicles. Carriages were something more than accessories; they were necessary to the undertaking. The contract was, as a consequence, subject to the law governing industrial accidents.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27] FEBRUARY, 1927 [NUMBER 2

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A FURTHER seasonal contraction in the volume of employment in Canada was recorded at the beginning of January, 1927, but the resulting employment situation was more favourable than on the same date in any of the preceding six years. This statement is based on returns received by the Dominion Bureau of Statistics from 5,851 firms (each with a minimum of fifteen employees) in industries other than agriculture and fishing. These firms employed 781,551 persons on January 1, 1927, as compared with 833,638 on December 1, 1926. The employment index number (based on the numbers employed in January, 1920, by the reporting employers, as 100) stood at 94.8 on January, 1927, as compared with 101.1 in the preceding month, and with 89.6, 83.9, 88.7, 86.3, 77.9 and 88.7 on January 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted during December as compared with the preceding month, but a considerable increase over the record for December, 1925. The decline was due mainly to a decrease in the number of placements in the logging industry. The number of placements effected in all industries during December, 1926, was 24,667; the corresponding number in November, 1926, was 28,338; and in December, 1925, 20,523. At the beginning of January, 1927, the percentage of unemployment among members of local trade unions was 5.9 as compared with percentages of 4.7 at the beginning of December, and 7.9 at the beginning of January, 1926. The percentage for January is based on returns received by the Department of Labour from 1,560 local trade unions with a total membership of 157,701 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.37 for January, as compared with $11.18 for December, 1926; $11.63 for January, 1926; $10.77 for January, 1925; $10.78 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $15.30 for January, 1920; $12.42 for January, 1918; and $7.73 for January, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was practically unchanged for January at 150.6, as compared with 150.5 for December, 1926; 163.8 for January, 1926; 165.5 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May, 1920 (the peak); 233.4 for January, 1920; 206.1 for January, 1919; and 191.7 for January, 1918.

The time loss caused by industrial disputes in January was more than in December, 1926, but less than in January, 1926. Eight disputes were in existence at some time during the month, involving 261 employees, and resulting in the loss of 4,020 working days. Corresponding figures for December, 1926, were eight disputes, 167 employees, and 3,778 working days; and for January, 1926, eleven disputes, 823 employees, and 9,769 working days.

Industrial Disputes Investigation Act, 1907

During January the Department received two reports from Boards of Conciliation and Investigation appointed under the Act. The first was a second interim report in connection with the dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and their checkers and coopers, members of the Brotherhood of Railway and Steamship clerks, etc. (the first interim report in this case appeared in the LABOUR GAZETTE, December, 1926). The second report received during the month was in connection with a dispute between the City of New Westminster and its employees, members of the City Fire Fighters Union. One application for the establishment of a Board was also received. Full particulars of recent proceedings under the Act are given on page 139.

Proposed old age pensions in Canada

A resolution providing for the introduction of a system of old age pensions in Canada was introduced in the House of Commons on February 10 by the Minister of Labour.

The resolution will be followed by a government bill, which, it is understood, will be drawn on lines similar to the Old Age Pension Bill of 1926. It will be recalled that on May 28, 1926, the Dominion House of Commons, without division, passed a bill respecting old age pensions, which was later defeated in the Senate on its second reading by 45 to 21 votes. A resolution passed by the House of Commons on March 15, 1926 (published in the LABOUR GAZETTE for that month), stated the principles which were afterwards incorporated in the Old Age Pension Bill. The proposed legislation was to provide pensions for British subjects, 70 years of age, resident in Canada, and without other means of support, the cost to be divided equally between the federal and provincial governments.

The Government of British Columbia introduced in the Legislature on January 19 a bill to provide for old pensions. The Act if passed would enable the provincial government to enter into an agreement with the Dominion Government as to a general scheme of old age pensions in the province, pursuant to the provisions of any act of the Dominion relating to old age pensions, and for the payment by the Dominion to the province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by the province during the preceding quarter for old age pensions. It would enable the provincial government to provide for the payment of such pensions under such conditions as may be determined by the federal act. The provincial act would be administered by the Workmen's Compensation Board, its duties to include the consideration of applications and the payment of pensions. For this purpose the Board is authorized to appoint a special staff. Until special appropriations are made the expenditures under the act are to be paid out of the Consolidated Revenue fund of the province.

A select committee of the British Columbia Legislature is to inquire into the administration of the Mothers' Pensions and Workmen's Compensation Acts.

Old age pensions in Australia

The Commissioner of Pensions of the Commonwealth of Australia recently published a statement in regard to the administration of Invalid and Old Age Pensions for the twelve months ended June 30, 1926. The provisions of the Commonwealth Act, in so far as it relates to old age pensions, were described in a supplement to the LABOUR GAZETTE, March, 1926, entitled "Old Age Pension Systems existing in various countries." Old Age Pensions are paid to men at the age of 65 and to women at the age of 60 years, whose property does not exceed £400 in value, and whose annual income, including pension, does not exceed £78. Men between 60 and 65 years of age are eligible for old age pensions if they are permanently incapacitated for work. The commissioner, or deputy commissioner under the act, has power to determine the amount of pension in consideration of the circumstances in each case. A recent official estimate gives the population of the Commonwealth as 6,043,924 persons. In the financial year 1925-26 the number of old age pensioners was 126,918 (51,458 men and 75,460 women). The number of old age pensioners in each 10,000 of population was 212. At the end of the year the liability of the Commonwealth for old age pensions for the coming year was estimated as £6,323,590. The cost of administration in proportion to every £100 of pensions was £1 4s 2d. In addition to the old age pensions provision is made under the same act for invalid pensions. The number of invalid pensioners in each 10,000 of the population was 81.45, the actual number of such pensioners being 21,795 men and 27,008 women.

Quebec employers' insurance organization

The Workmen's Compensation Act of the province of Quebec, enacted in 1926, which becomes effective on April 1, requires employers to guarantee the payment of compensation to their injured workmen either by means of insurance, or by depositing with the Provincial government cash bonds sufficient to answer for their solvency. Manufacturers desiring to insure themselves in accordance with this provision found that advances had been made by insurance companies in casualty insurance premiums. They decided therefore to organize their own mutual insurance company. This action was taken at a joint meeting of the Quebec division and Montreal branch of the Canadian Manufacturers' Association, held at Montreal on January 17, when it was decided to apply for a mutual insurance company charter. The members of the provincial cabinet later heard the argument of the manufacturers and also of the underwriters.

Certificates for miners in Nova Scotia

Miners' certificates in Nova Scotia are now issued only to miners who have acquired competency after one year's employment in a mine within the province. Local Miners'

Boards are thus debarred from granting certificates of competency to miners who have gained their experience in other Canadian provinces or in countries outside of Canada. A ruling to this effect recently made by the Department of Public Works and Mines, is based upon an interpretation of the Coal Mines Regulation Act in which the Provincial Attorney General's Department concurs.

Sections 18 and 19 of the Act are as follows:—

18. (1) No person shall be qualified to receive a certificate of competency as a coal miner who has not been employed in some capacity in a mine for the period of at least one year.

(2) No person shall be employed to cut, shear, mine, bore, loosen or extract coal by hand, machinery or otherwise in any mine who is not in possession of a certificate of competency as a coal miner.

19. (1) No person shall be given charge of a working face in a mine who is not in possession of a certificate of competency as a coal miner and in addition has been employed in a mine for at least one year as a coal miner.

"Mine" is defined by the interpretation Section of the Act, Section 4 (1), as follows:—

"Mine" means a mine to which this chapter applies. . . . .

As interpreted by the Department of Mines the Act does not apply to mines outside of Nova Scotia but to mines within Nova Scotia; therefore the one year's employment in some capacity necessary to qualify a person to receive a certificate of competency as a coal miner must be one year's employment in some capacity in a mine in Nova Scotia to which the said chapter applies. A certificate of competency as a coal miner cannot, therefore, be issued to a person who has not had employment in such a mine in Nova Scotia.

Co-operative marketing in Canada

A special contributor in the *Co-operative News* (Manchester) gave an account of the progress of co-operative marketing in Canada, in the course of which he says: "Co-operative marketing of agricultural products in Canada is probably more advanced than in any other country in the world. It is estimated that approximately 430,000 farmers out of a total of 700,000 in the Dominion are now selling their products in some measure co-operatively. The total volume of products sold in this way in 1925 would appear to have been worth $300,000,000, which means that between 50 and 60 per cent of Canadian farmers combined last year (i.e. in 1925), to sell 30 per cent of their entire production co-operatively. While these figures are only approximate, they tend to show, with some degree of accuracy, the magnitude and the responsiveness which this movement has met with among Canadian farmers.

"Almost every produce of the farm is marketed co-operatively in Canada in some portion of the Dominion or other. Apples and other fruits are so disposed of in Nova Scotia, Ontario and British Columbia; milk for human consumption and butter and cheese in almost every one of the nine provinces; commercial live stock in every province; seeds of all kinds in every province; hay in Alberta, Ontario and Quebec; wool in every province through the Canadian Co-operative Wool Growers' Association; vegetables in Ontario and British Columbia; tobacco in Ontario and Quebec; potatoes in several provinces; eggs and poultry in almost every province; and wheat and other grains through that immense co-operative organization of the Pool."

W. George H. Barr, K.C. recently contributed to the *Monetary Times* an interesting account of the origin, methods, and operations of the "wheat pool." Through the instrumentality of the Canadian Co-operative Wheat Producers, Limited, the entire crop of 132,789 farms in Western Canada, comprising 15,287,810 acres, is now being placed upon the market, approximately 85 per cent direct to the consumer. The proceeds of the 1925 crop alone handled by the selling agency amount to over $253,000,000. To facilitate this work, branches have been established in grain importing countries and the selling agency has now representatives in England, Scotland, Ireland, Germany, Belgium, Holland, Denmark, Sweden, Norway, Switzerland, Portugal, Italy and Mexico; and either offices or representatives in the cities of Rio de Janeiro, Paris, New York, Calgary, Toronto, Vancouver and Winnipeg.

Encouraged by the success of the Wheat Pool, which is the outstanding organization of this new movement, other classes of producers in Western Canada have organized themselves along similar lines. Egg and poultry pools are operating in all three provinces. In Saskatchewan alone, while the pool only commenced operations on March 29, 1926, it has now a membership of 18,260, and during the past year the pool has handled 89 carloads, or 1,200,000 dozen of eggs. A live stock pool is already in operation in Alberta, and one has been organized and is on a fair way to completion in Saskatchewan. One of the interesting developments in connection with the various pools is the encouragement they give to the producer to improve the standard of the commodity which he places upon the

market, and the organizations themselves stand to render the members every assistance along these lines.

Labour and co-operative alliance in Great Britain

A draft agreement was made last month between the labour and co-operative parties in Great Britain, its purpose being, according to the *New Statesman* (London), to prevent possible clashes in the nomination of candidates for the same seats in municipal as well as parliamentary elections. Otherwise it is anticipated that the agreement will involve only a slight change in the existing situation. Ever since the co-operative movement first entered politics during the war, the two bodies have worked in informal alliance. Co-operative members of parliament have been elected with official labour support, and have received the labour whips in the House. At least one of them was a member of the Labour Government of 1924. Moreover, although the co-operative party have a separate existence, a good number of local co-operative societies are formally affiliated to the labour parties in their areas, and take a direct part in the nominating and financing of labour candidates.

Proposed power development in Saskatchewan

The Saskatchewan government has appointed a commission under the Public Inquiries Act, to inquire into and report upon the economic practicability of generating power at central power plants and water power sites in the province. The commissioners are Messrs. Louis A. Thornton, of Regina, chairman, Arthur Hitchcock, of Moose Jaw, and Alexander R. Greig, of Saskatoon. Their instructions are to carry on investigations as to the proposed construction of central power plants in the lignite coal fields of Southern Saskatchewan or in other centres; whether char, briquettes and other by-products also could be produced at such plants; the cost of such power, the distance it could be transmitted, and the price to be charged the consumers; and the probable extent to which farms might be electrified, in view of such developments in other provinces and elsewhere. The commission will also study the hydro-electric possibilities of the province.

An inquiry on somewhat similar lines was undertaken in the province in 1912, when Mr. R. O. Wynne-Roberts was appointed as a commissioner to inquire into the practicability of producing power at coal centres and distributing it throughout the province, his report being laid before the legislature in November in the same year. Since then, however, great developments have taken place in the province, new sources of water power being discovered and surveyed, and the science of producing and distributing electrical energy has progressed considerably. These facts appeared to warrant a further inquiry into the whole subject of the production and distribution of power within the province.

Civil Service superannuation in Saskatchewan

The speech from the Throne at the opening session of the Legislative Assembly of Saskatchewan announced that the government would introduce a bill to provide for the superannuation of provincial civil servants based upon the principles of the resolution agreed to unanimously at the session of 1926 (LABOUR GAZETTE, February, 1926, page 120). The resolution referred to directed that "the Government should give early consideration to, and devise, a superannuation scheme applicable to all branches of the Public Civil Service." It was suggested that government employees should contribute four per cent of their monthly salaries, the Government guaranteeing to pay pensions out of provincial consolidated revenues. Males would be retired compulsorily at the age of 65 and women at the age of 60, the lieutenant-governor-in-council having power, in exceptional cases, to allow men and women to continue in the service for an additional five years over the age limit. Only employees who had been in the civil service for ten years or more would be eligible for superannuation. A bill to this effect was introduced in the Legislature on February 2.

Winter activity in construction industry

Good results are reported to be following the recent efforts of the building and construction industry to promote building operations during the winter months as a means of stabilizing employment in the building trades. The *Canada Lumberman*, in its issue of January 15, noted that in Montreal there is evidence that more building is proceeding now than in former years at this period. "The open weather has, of course, something to do with this, but apart from this circumstance, builders are making every effort to get away from the custom which enforced a period of idleness for the office staff and for the men. Experience has demonstrated the practicability of winter construction, although at an increased cost, but against this can be set the more settled conditions of employment, the spreading of overhead over a longer period of activity, and the

keeping together of the staff. One of the objections to many entering the building trade, and to skilled mechanics seeking employment in that industry, has been the period during the winter months, when work has been suspended and wages stopped. This is gradually being eliminated, because contractors are adopting methods to meet the conditions. From the lumber point, dealers naturally favour construction over a longer period. This enables them to employ their helpers in a much more satisfactory way; instead of the work being limited almost entirely to the spring, summer and fall, it is spread over practically the entire year. The retailers in Montreal report that business this winter has been good, and that they have been compelled to replenish stocks at a time when buying is usually very quiet. The wholesalers also state that orders have come in freely having regard to the season, and they too welcome any change which will give them business during the winter months. Winter construction has thus benefited both sections."

Municipalities prefer collective accident liability

Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board, recently mentioned as an argument in favour of collective accident liability, the fact that many of the employers who would otherwise come under schedule 2 of the Act have asked to be transferred to schedule 1. It will be recalled that schedule 1 comprises the employers in the Province who are under collective insurance and pay an assessment to the Board. Schedule 2 includes employers who "pay as they go," this category comprising the large railway, steamship, express and telephone companies, municipal corporations and commissions. Mr. Sinclair states that out of the 376 employers in schedule 2, 214 (all of them municipalities and commissions) asked to be brought under schedule 1.

The largest classes not at present covered by the provisions of the Act are farmers and persons engaged in husbandry and those in wholesale and retail trades, all of whom are exempt unless their business forms part of a manufacturing concern. Many persons carrying on small operations are excluded by regulations of the Board. For example, the excluded classes include small concerns employing less than six workpeople in bakeries, laundries, cheese or butter factories, cutting logs, etc.; and small concerns employing less than four people in repair and blacksmith shops, upholstering, picture framing, butchering, waterworks, etc.

Sunday work in pulp and paper industry

Mr. L. R. Wilson, president of the Canadian Pulp and Paper Association, at the annual meeting held at Montreal on January 28, stated the policy followed by the Association in regard to the movement to enforce the observance of the weekly rest in the pulp and paper mills. The existing practice in regard to Sunday observance in this industry in the Province of Quebec was outlined in the January issue of LABOUR GAZETTE (page 39), in view of the provincial government's recent declaration that the provisions of the Lord's Day Act would be strictly enforced in future. The president said:—

"There has been a tendency upon the part of some of the provincial governments to hamper our industry by demanding a literal compliance with the Lord's Day Act, and in other ways. This has been met by our members in a spirit of conciliation and a willingness to comply with every reasonable demand. The authorities, however, should bear in mind the peculiar nature of our industry, some branches of which necessitate continuous operations, as well as the fact that we are in competition with the paper manufacturers of the world, and that anything which adds to cost of producing paper in Canada, or which tends to interfere with the regularity of our shipments to other countries, contributes to the success of our competitors abroad and works to Canada's disadvantage."

The Association decided at the same meeting to erect and endow a research laboratory at McGill University, Montreal, at a cost of $350,000, this amount having been subscribed in full by the members and by the university.

Progress of group insurance in Canada

The adoption of employees' group insurance under various governmental, municipal and industrial schemes has been noted in recent issues of the LABOUR GAZETTE. Mr. George H. Harris, of the Sun Life Assurance Company of Canada, contributes an article on this subject to the January issue of *Industrial Canada*, the monthly magazine published by the Canadian Manufacturers' Association. He describes the "colossal growth" of life insurance in recent years, and proceeds as follows:—

"In these new developments group insurance occupies a place of great importance. Simply described, it is an arrangement under which the whole, or groups, of the employees of any particular company may be granted insurance protection at very low rates, the ordinary formalities pertaining to individual

insurance being largely dispensed with. It has been found possible to forego individual medical examination, and by dealing with the employer, or the employing corporation, as the contracting party, to eliminate or substantially reduce certain items of expense. The result is that life insurance has been brought within reach of people who, without this aid, might be unprotected or at least inadequately protected. Group insurance is being written in Canada by tens of millions of dollars a year. Whole industries have adopted it. The diversification of employment to which it has been applied covers almost the whole range of business activity. The employees of banks, financial houses, and similar institutions, are protected with the factory hand and the labourer.

"In the early efforts to popularize group insurance in Canada the tangible advantages to the employer were emphasized. He was told what is undoubtedly true that group insurance reduces labour turnover, stabilizes employment and effects economies. While this is as true to-day as it was then, the point is not so much insisted upon. It has been found rather that the employer cannot, and does not, desire to detach himself from interest in the welfare of his employees and their families, and that when he realizes that it lies within his power to bring a benefit to those who work for him, on terms which, by themselves, they cannot secure, he is willing to lend his aid. The point that in many cases—perhaps in most cases—life insurance is really needed in inverse ratio to a man's ability to acquire it and pay for it is also perceived. With the working classes particularly there still survives some prejudice against insurance, and this, coupled with the difficulty of paying premiums from tiny incomes, makes this class the hardest for the life insurance salesman to reach. The employer's endorsement of the principle, and his practical assistance in paying, effectually dispose of these obstacles."

Unemployment in European countries

Unemployment has increased in France during the last few months, owing mainly to the fall in prices and the consequent slackening of industry and to the rise in the franc, which has deprived business of its "export premium." Various steps have been taken to deal with the situation, by way of allowances for the unemployed, control of foreign labour, public works, etc. In Belgium, currency stabilisation has not so far led to the anticipated industrial depression and increased unemployment. Measures, however, are proposed by the workers' organisations to deal with these threatened consequences of stabilization. An agreement for the stricter regulation of recruitment of Polish labour for work in Belgium, and for the protection of such immigrant workers on arrival, has been made between the national trade union organizations of the two countries. The emergency legislation relating to the period of unemployment benefit in Austria and the distribution of the cost has been extended, with some modifications in favour of the unemployed worker, until the end of the present year.

In Great Britain the Government has announced that it is not prepared to institute a special system of unemployment insurance for landworkers. A Government Committee on education in relation to industry recommends a number of administrative and other measures in connection with juvenile employment and unemployment. An enquiry into the causes of unemployment and possible remedies for it has been undertaken by the General Federation of Trade Unions. A list of questions, inviting not only answers in respect of facts, but also suggestions and statements of opinion, has been addressed to all concerned in the problem of unemployment in Great Britain. The list distinguishes three forms of unemployment: seasonal, sporadic, and endemic. Seasonal unemployment is defined as that which in some trades recurs at regular intervals; sporadic unemployment, as that which occurs irregularly and may arise, among other things, from war or changes in methods of production and in fashions; endemic unemployment as that form of unemployment which has become chronic owing to psycho, logical, as well as economic or political causes. The questions relating to seasonal unemployment have as their object to determine the causes of seasonal fluctuations, and more particularly the extent to which they can be attributed to weather and varying temperatures. Sporadic unemployment occupies the most important place in the questionnaire. The questions relating to it seek to elucidate the influence of a large variety of factors such as war, threat of war, non-co-operation, boycotts, industrial dislocations, shortage of supplies or increased prices of raw materials, increases in other items of the cost of production (for example, taxes, freightage, wages), delay in deliveries to home or overseas markets, imposition of tariffs or preferences, manufacturers' or speculators' restrictions on production, or restrictions imposed by labour, its mobility, or by a housing shortage in the district, shortage of capital for industrial purposes, juvenile labour.

As regards endemic unemployment, it is sought to ascertain to what extent the causes lie in moral or physical defects of the individual, or in circumstances beyond his control.

Economic value of wage earners

Dr. Louis A. Dublin, statistician of the Metropolitan Life Insurance Company, in a pamphlet reprinted from *Harper's Monthly Magazine*, discusses the "Economics of World Health." In order to demonstrate the extent of the social losses caused by sickness the writer estimates the net value of the earnings of average individuals. The computations are for the great body of wage-earning families in the United States whose total family resources are about $2,500 a year. Under present conditions the cost of rearing a child in such families to the age of self support, including food, shelter, clothing, education, etc., is estimated at $7,238. Including interest on the capital, and making due allowance for the cost of those who do not survive age 18, the amount is increased to a little more than $10,000. "This amount," it is explained, "does not include one very important item, namely, the money value of the mother's care. We were compelled to limit ourselves to the family's money income, but we recognize that the working mother makes a real contribution to the total income of the family; for if wages were to be paid commensurate with the mother's value in the bringing up of children, the sum would be considerable and would add materially to the $10,000 actually spent by the family in raising a child to self-support. Our figure is, therefore, a minimum and will serve to keep our other calculations conservative."

The writer next attempts to compute the value of a man as wage earner in the same group, that is, in the $2,500 income class. The money equivalent of the wife's services is not included in the compilation, but disregarding this item, the present worth of future wages of a wage-earner at the age of eighteen are calculated as being well in excess of $41,000, and the present worth of his future expenditures at less than $13,000. "The present worth at age 18 of the net future earnings of a man in this economic class was accordingly close to $29,000. The maximum value of a man in this income class is reached at age 25, when the present worth of his net future earnings is more than $32,000. With advancing age, the present worth of net future earnings declines. At 50, it is $17,510; at 60, about $8,500. After age 70, the present worth of net future earnings is negative because earnings cease and the cost of maintenance continues. An astonishing item in our calculations is the high economic value of a child at birth. We found the sum to be $9,333. This is the amount which it would be necessary to put at interest at three and a half per cent, in order to bring up the child to age 18 and to produce the net income throughout the working-period of life."

After further calculations as to the economic value of the other earning classes, without any attempt, however, to compute the economic value of the housewife's contribution to the family budget, Dr. Dublin finally reaches the following conclusion:—

"If we estimate that the economic value of women in general is only one-half that of men, this will make the value of that sex 500 billions, and the total vital assets, males and females combined, over 1,500 billion dollars. Our national wealth in material assets in 1922 was 321 billion dollars. This includes real property, live stock, machinery, agricultural and mining products, and manufactured good of all sorts. Our vital capital, therefore, exceeded our ordinary material wealth about five to one."

Conciliation in labour disputes in United States

The conciliation work carried on by the United States Department of Labour is outlined in the report of the Department for the fiscal year, 1925-26, recently issued. The Secretary of Labour has the right to assign commissioners of conciliation in connection with disputes when he believes it advisable to do so. In practice he refrains from intervening except on the request of one or both parties directly affected, or of the officials or representatives of the community concerned. An exception to this rule is made only in connection with disputes of unusual character or great importance. Intervention is not favoured if there appears any likelihood of a settlement by negotiation, but in many cases the services of an experienced government mediator are often sought to guide the negotiations. It has been found that a trained neutral government representative generally finds both sides willing to accept his services. It is a matter of real satisfaction, the report states, that large numbers of employers and employees have expressed their hearty approval of the methods employed by the Conciliation Service. "The efforts of the representatives of this service are directed always toward the prevention of an open break that stops production, with the consequent loss in wages and profits. They endeavour to have work go on while negotiations are being conducted to bring about a settlement of the existing differences. If this be impossible

and a strike or lockout occurs, then their task is to secure a prompt and workable adjustment, having always in mind the interests not only of the employer and employees but of the public as well."

The Hon. James J. Davis, Secretary of Labour, records his opinion after five years of close observation as follows:—"It has been demonstrated that grave industrial controversies which refused to yield to any other method have finally been satisfactorily settled in joint conferences arranged and guided by impartial Government mediators. This method in practice has established itself as the most successful and is coming into wider recognition and acceptance. Congress in its wisdom during the last session, in shaping the United States Board of Mediation to handle railway cases, laid down for the guidance of that body the same general policies and procedure that have been in force in the Conciliation Service.*

"A controversy settled around the peace table is generally permanently settled, because it has been adjusted on the only right principle—the principle of letting the disputants settle matters themselves. They alone know their problems best and are better qualified to find the settlement that will suit all parties. All that is needed is some outside influence to bring them in the proper spirit about the council table. In a word, our method is to employ common sense, the spirit of good-will, and the skill that comes from experience in handling trade disputes."

Handbook of American Trade Unions

A "Handbook of American Trade Unions" has been published lately by the Bureau of Labour Statistics, United States Department of Labour, containing lists of all the important labour organizations functioning in June, 1926, with details on the following subjects: the relation of the organization to the American Federation of Labour; a brief account of its origin and history; jurisdiction, both trade and territorial; form of government; qualifications for membership; apprentice system (as intended by the organization and provided for in its constitution); method of negotiating agreements; benefits paid; official organ; location of headquarters; extent of organization; and total membership.

One hundred and fifty-six organizations are included in the handbook. Of these 107 are affiliated to the American Federation of Labour. Many of those outside the Federation have never been identified with it, among them being most of the railroad organizations, including the "Big Four" brotherhoods, and practically all of the organizations in the United States Post Office. The purely craft or industrial organizations outside the American Federation of Labour have been formed chiefly as the result of secession from the American Federation of Labour unions, and are sometimes described as "dual" or "outlaw" unions. They are found principally in the clothing, textile, and shoe industries.

The total membership of the international organizations affiliated to the American Federation of Labour, as shown in their reports to the Bureau of Labour Statistics, is 3,333,597. This, together with 50,400 additional in directly affiliated local unions, gives the American Federation of Labour a total membership of 3,383,997. Membership of organizations outside the Federation, including the Industrial Workers of the World, is 1,059,526.

*LABOUR GAZETTE, May, 1926, p. 423.

Mr. E. S. H. Winn, K.C., chairman of the Workmen's Compensation Board of British Columbia, has been reappointed to that position for a further period of ten years.

Accident insurance for firefighters was discussed at a recent meeting of the city commissioners and employees at Edmonton, Alberta. A group insurance plan to cover all civic employees is now being considered, and it is stated that special protection may be offered to the firemen when a new agreement is under discussion.

Herman Trelle, of Wembley, Alberta, won the championship for 1926 for both wheat and oats at the International Grain and Hay Show at Chicago. Mr. Trelle was born in Idaho 31 years ago and came to Alberta with his parents in 1900. He received his early education at Edmonton, where later he attended the university, graduating as civil engineer. He served with the Flying Corps during the war. In 1920, when on a survey party north of Edmonton he became interested in the Peace River country, and filed on a homestead at Wembley. He now farms 480 acres.

The United Farmers of Alberta at their 19th annual convention, held at Edmonton in January, rejected a proposed resolution that the central officers of the Association should communicate with the labour organization in the province with the object of forming an alliance of farmers and labour. A substitution motion was adopted, in which the United Farmers reiterated their friendship and expressed their desire to co-operate with labour in the federal and provincial fields.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of January was reported by the local superintendents of the Employment Service of Canada to be as follows:—

In the province of Nova Scotia the weather had delayed logging operations and, while some men were being placed, neither applications nor vacancies were heavy. Fair catches of fish were reported, but rough weather was impeding the work of the fishing industry. Except in Halifax, where some construction work was progressing and where expectations of the erection of two or three buildings of some magnitude in the near future were entertained, the building and construction industry was rather quiet. The manufacturing industries were fairly active. Transportation was likewise fairly busy.

The condition of the fishing industry in the province of New Brunswick was satisfactory, with large catches being made. As in Nova Scotia, the logging industry in this province was rather good, although the mild weather was interfering with it to some extent. Manufacturing industries were reported as being busy, but the construction industry was very quiet. While railroad transportation was only fair, water transportation, due to activities in the winter port of Saint John, was active.

From the province of Quebec it was reported that orders for farm workers had begun to be received by the offices. With the logging industry active, heavy demands for workers in this line were being received, and the supply of them in the city of Quebec was stated to be inadequate. The boot and shoe manufacturing industry was satisfactory in the city of Montreal and was improving in the city of Quebec; the metal manufacturing industry was quiet; the printing industries appeared to be busy; textile manufacturing was likewise busy; and the pulp and paper manufacturing industry continued at a high level of activity. Building and construction, which had continued into the early part of the winter, had subsided in activity to a considerable extent towards the close of January. The usual winter falling off in wholesale and retail trade was recorded.

The demand for farm workers in Ontario seemed to be on the increase, but the supply of workers appeared adequate. With stocktaking nearly completed, the manufacturing industries in the southern portions of Ontario had in almost all cases resumed their normal activity, and there seemed to be no falling off in comparison with the pre-stocktaking period. While no substantial increases in factory staffs were being made, the employment offices at some centres were receiving several requests for highly skilled mechanics in different trades. Although very little actual building or construction work was being carried on at present, the prospects for the immediate future were promising. Activity in the logging industry continued, but with fewer demands for workers. A normal activity with only a small labour turnover in the metal mining industry was noted. Vacancies for female domestic workers were still numerous.

Farm orders were increasing slightly, but applicants were sufficiently numerous in the province of Manitoba. Employment in the construction industry in Winnipeg was better than during any winter of the last several years, and the prospects for 1927 appeared hopeful. In this province the employment offices were receiving a fair number of calls for general labour for short jobs, but applicants were considerably in excess of these demands. With few experienced applicants for work in the logging industry applying, there was a decline in orders in this group. A fairly substantial number of vacancies for female domestic workers were being notified.

Farm orders received at the Saskatchewan offices were fairly numerous, but applicants were plentiful. The few calls for general labourers were easily met. In the Prince Albert district the requirements for logging workers exceeded suitable applicants. Female domestic workers continued to be in brisk demand. With general conditions throughout the province rather quiet, there did not appear to be any unemployment which could be considered as abnormal for the time of year.

A nominal demand for farm workers in Alberta was more than counterbalanced by the number of applicants seeking this work. Although the construction industry in this province was rather quiet, it was not unusually so for the winter season. The demand for logging workers continued to be rather good. Coal mining was not very brisk, and no additional workers were being taken on. General employment conditions throughout Alberta were rather quiet.

Fair activity in the logging industry in British Columbia was reported, but not many men were being taken on. Mining, both coal and metal, continued normal, with very little fluctuation. The building and construction industries seemed to be seasonally quiet throughout the whole province. Manufactur-

ing industries did not appear to be increasing their activity to any noticeable extent. While unplaced applicants were reported from all centres in British Columbia, their numbers did not seem to indicate that the volume of unemployment was exceptional for the season of the year.

EMPLOYERS' REPORTS

There was considerable seasonal curtailment in employment at the beginning of January, the losses involving a rather larger number of workers than that noted on the corresponding date last year. The percentage decline was, however, about the same size, while both absolute and proportionate reduction were smaller than on the corresponding date in the first five years of the record. An aggregate working force of 781,559 persons was reported by the 5,851 reporting firms, who had 833,638 employees on December 1. The index number stood at 94.8, as compared with 101.1 in the preceding month, and with 89.6, 83.9, 88.7, 86.3, 77.9 and 88.7 on January 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review* §For group figures see articles elsewhere in this issue. **Figures for four weeks ending January 29, 192 , and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

All except the Maritime Provinces reported declines, those in Quebec and Ontario being most extensive. In the Maritime Provinces, manufacturing, construction and trade were seasonally slacker, while greater gains were noted in logging and transportation, those in the latter being due to the re-opening of the winter ports. The net increase in the Maritime Provinces was very much larger than on January 1, 1926. In Quebec, manufacturing, transportation and construction showed marked curtailment, exceeding that reported on the same date last year, but logging and retail trade registered significant advances. In Ontario, there were important recessions in the iron and steel, lumber, food, textile and pulp and paper industries, while logging and trade showed considerable improvement. The general decline in Ontario was smaller than at the beginning of January of any other year of the record. In the Prairie Provinces, there were heavy declines in construction, and manufacturing was quiet. There were also smaller losses in mining, transportation, trade and communication, the only general increase reported being in logging. In British Columbia, construction, mining and manufacturing showed curtailment; the number of persons released was greater than in the corresponding month last year.

There were contractions in the eight cities for which separate tabulations are made, those in Montreal, Windsor and Toronto being most pronounced. In Montreal, manufacturing, construction and transportation were seasonally slacker; within the first named the food, beverage, tobacco and iron and steel divisions showed the largest declines. The general reduction was smaller than that reported on the corresponding date last year. In Quebec, seasonal curtailment in shipping caused a loss, while in other groups comparatively small changes were noted. In Toronto, there were general recessions in manufacturing, the largest being in food and iron and steel plants. Construction, communication and transportation were also slacker, but retail trade reported important gains. In Ottawa, lumber mills showed a seasonal falling off in employment, as did construction. In Hamilton, manufacturing, especially iron and steel plants, released employees, while there were also decreases in transportation, construction and trade. In Windsor and the other Border Cities, the closing of several important automobile plants for inventory purposes caused the usual pronounced contraction at the beginning of January. In Winnipeg, construction, manufacturing and trade registered the greatest declines. In Vancouver, employment in lumber mills, construction and transportation showed a falling off, and trade was also slacker.

The losses in manufacturing on January 1, 1927, though larger than on the same date in 1926, were smaller than at the beginning of January in previous years of the record. Iron and steel, lumber, food, pulp and paper, textile, tobacco and beverage factories reported the largest decreases, though all divisions recorded curtailment. There were very marked contractions in construction and maintenance, and employment also declined in logging, mining, communication, transportation and services. Pronounced increases in personnel were noted in trade, which, however, was not so active as in Christmas week. The index number of employment was higher than at the beginning of any other month since the record was begun in 1920.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of January, 1927.

Trade Union Reports

Unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The industrial depression usually evident toward the end of the year, combined with the closing of a number of establishments over the holiday period and for stocktaking and inventory purposes, was responsible for the slightly less favourable situation among local trade unions at the close of December, 1926, than in the preceding month. Returns for December were tabulated from 1,560 labour organizations with an aggregate membership of 157,701 persons, and indicated a 5.9 percentage of unemployment in comparison with 4.7 per cent at the end of November. Employment was, however, on a higher level than in December 1925 when the percentage of idleness stood at 7.9. British Columbia was the only province to report greater activity during December than in the previous month while in Alberta no change occurred. The curtailment in operations in the remaining provinces was fairly well distributed, no one province showing any outstanding reduction. In making a comparison with

December, 1925, the Quebec unions reported a much improved situation during the period being reviewed, to a great extent due to the better conditions prevailing in the garment trades. In addition, Nova Scotia, New Brunswick, Ontario and Saskatchewan unions registered minor increases. Manitoba, Alberta and British Columbia unions, on the other hand, were less actively employed, though the declines were slight. The manufacturing industries, with 422 unions comprising a membership of 42,844 persons, reported a 1 per cent decline in employment, 7.3 per cent of the members being out of work on December 31st, 1926, as compared with 6.3 per cent in November. The most decided increase in idleness was registered among cigar makers, while there were also increases in unemploymnt among iron and steel, wood, jewellery, glass, textile and garment workers, and among printing tradesmen. In addition to those entirely unemployed, some short time was recorded, especially in the metal trades. In comparison with the returns for December, 1925, the situation in the manufacturing industries was much improved. Among coal miners in Nova Scotia and Alberta the change was but nominal as compared with November, but in British Columbia the situation showed considerable advancement. Owing to a winter shutdown in the quarries of Nova Scotia, a large number of the members were reported out of work. The seasonal curtailment in building and construction, which has existed for the last few months, continued into December, when 19.3 per cent of the members were reported as idle, as compared with an unemployment percentage of 12.7 in November. Bridge and structural iron workers alone were afforded more work than in November, and of the declines the most substantial were among steam shovel and dredgemen, tile layers, lathers and roofers, and granite and stonecutters. In comparison with December, 1925, when 21.0 per cent of the tradesmen were out of work, carpenters and joiners, electrical workers, painters, decorators and paperhangers, plumbers and steamfitters, and hod carriers and building labourers all reported a better situation, but in the remaining trades there was greater unemployment. Reports from 639 unions of transportation workers with 56,199 members indicated an unemployment percentage of 3.0, as compared with 1.5 per cent in November and 4.2 per cent in December, 1925. Extensive curtailment, due to the closing of navigation for the winter season in the province of Quebec, caused the percentage out of work to rise to a considerable height in December in the shipping and stevedoring division as compared with that of the previous month. In the steam railway division also, whose returns constitute nearly 83 per cent of the entire group membership reporting in the transportation industry, there was a slightly adverse change as compared with November, but among street and electric railway employees and teamsters practically no change occurred. A slightly greater volume of business was afforded hotel and restaurant employees, theatre and stage employees, and barbers, but stationary engineers and firemen reported slightly more idleness. The level of employment for fishermen remained the same as in November, but among lumber workers and loggers there was considerable slackness as compared with no unemployment in November.

An article elsewhere in this issue gives a summary of unemployment as reported by local trade unions during the quarter ending December 31, 1926.

EMPLOYMENT OFFICE REPORTS.

During the month of December, 1926, the offices of the Employment Service of Canada made 25,641 references to positions and effected a total of 24,667 placements. The number of placements made in regular employment during the month was 15,540, of which 12,896 were of men and 2,644 of women workers. In casual work the offices made 9,127 placements. Employers notified the Service of 26,287 vacancies, of which 18,756 were of men and 7,531 of women. The number of registrations for work was 27,831 of men, and 8,414 of women, a total of 36,245 applications. Compared with the preceding month a decline is shown in the volume of business, but a comparison with the corresponding period a year ago shows a considerable increase, the records for November, 1926, showing 29,551 vacancies offered, 42,917 applications made, and 28,338 placements effected, while in December, 1925, there were recorded 21,797 vacancies, 32,802 applications for work, and 20, 523 placements in regular and casual employment. A report in detail of the work of the offices for the month of December may be found elsewhere in this issue, and on another page will be found a statement of the activities of the offices for the last quarter of the year 1926.

PRODUCTION IN CERTAIN INDUSTRIES.

Some figures indicating the recent movements of trade and industry are given in the table on page 134. The Dominion Bureau of Statistics, Canada reported that production of pig-iron in Canada during December, 1926, amounted to 53,971 long tons, a slight increase over the 52,345 tons reported for the previous month, but a

little below the output of 54,889 tons in December 1925. During the 12 months of 1926 the cumulative production was 737,503 tons, or 29 per cent over the 570,397 tons of 1925, and 24 per cent more than the 593,024 tons of 1924. Ontario produced 488,000 tons of pig-iron or 66 per cent of the year's output, as against 65 per cent of the total in 1925; the balance was accounted for by Nova Scotia in both years. Five furnaces, having a total daily capacity of 1,825 tons per day or about 36 per cent of the total capacity of all blast furnaces in Canada, were in blast on December 31. The active furnaces were located as follows: 2 at Sydney, N.S.; 2 at Hamilton, Ont.; and 1 at Sault Ste. Marie, Ontario. There are 15 iron blast furnaces in Canada, which if operated at capacity the year round could produce 1.8 million tons of pig-iron. Actual production in 1926 amounted to 737,503 tons so that about 41 per cent of the total possible output was produced during the year. In 1925, corresponding figures showed an output amounting to 32 per cent of the total possible production.

Production of ferro-alloys at 3,804 tons in December showed a gain of 15 per cent over the 3,308 tons of November. For the 12 months' period the total output was 37,954 tons or 48 per cent over the 25,709 tons reported for 1925 and compares with 26,400 tons in 1924, and 28,961 tons in 1923. Over one-half of the output of 1926 was high grade ferro-manganese and the balance was ferro-silicon. Only 3 plants in Canada reported a production of ferro-alloys during 1926.

In December the production of steel ingots and direct steel castings in Canada was 58,493 tons or 8 per cent over the 54,311 tons of November production in December, 1925, amounted to 63,353 tons.

For the 12 months ending December 31, 1926, the cumulative production of steel ingots and castings totalled 776,888 tons, an increase of 3 per cent over the 752,695 tons of the previous year. In 1924 the output was 650,690 tons and in 1923 amounted to 884,770 tons. During 1926 four firms in Canada reported a production of steel ingots from basic open hearth furnaces, 3 concerns made basic open hearth castings, 3 made converter castings and 9 firms produced direct castings from electric furnaces.

Coal Production.—Full statistics of coal production during December are not yet available. The output of coal from Canadian mines during November was 5 per cent more than the production for the preceding month, and 10 per cent greater than the average for November in the past five years. The figures were 1,803,694 tons in November as against 1,704,851 tons in October, and an average of 1,626,098 tons during the five preceding years. All the coal-producing provinces, except Nova Scotia, and British Columbia showed a gain in production over the preceding month, and the outputs of Nova Scotia, Saskatchewan and Alberta were greater than the average for the month in the five preceding years. Men employed in the coal mines of Canada during November numbered 30,150, of whom 23,303 worked underground and 6,847 on surface, as compared with a total of 28,838 in October, of whom 22,389 worked underground and 6,449 on surface. Production per man was 59.8 tons in November, as against 58.8 tons in October. During November the production per man-day was 2.6, as compared with 2.5 tons in October. The tonnage lost was largely due to lack of orders.

External Trade.

The summary of Canadian trade prepared by the Department of Customs and Excise shows that the grand total of Canadian trade in December, 1926, was $221,582,986 as compared with $253,317,215 in December, 1925. However, the total for the first nine months of the fiscal year 1926-27 continued to exceed that for the same period in 1925-26, being $1,762,049,130 in the later and $1,725,796,820 in the earlier period. In December, 1926, the merchandise entered for consumption amounted to $81,774,995 as compared with $76,918,288 in December, 1925. The domestic merchandise exported, amounted to $138,421,475 in December, 1926, as compared with $152,355,795 in November, 1926, and $175,555,228 in December, 1925.

The chief imports in December, 1926, were: iron and its products, $14,168,515; non-metallic minerals and products, $14,072,817; and fibres, textiles and textile products, $13,615,762.

The chief exports in the same month were in the group of agricultural and vegetable products, mainly foods, $72,904,069; wood, wood products and paper, $22,909,082.

In the nine months ending December, 1926, exports of agricultural and vegetable products, mainly foods, were valued at $419,547,195; wood, wood products and paper at $217,725,799, and animals and animal products at $132,027,299.

Building Permits and Contracts Awarded.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada by the municipal authorities during the month of December, 1926, amounted to $11,472,131, as compared with $9,968,937 in November, and $7,363,777 in December, 1925.

The increase in the first comparison was 15.1 per cent, and in the latter 24.8 per cent.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in January, 1927, at $16,771,800 as compared with $13,725,000 in December, 1926, and $12,669,000 in January, 1926. This is the largest January total since 1913. The contracts awarded in January, 1927, were classified as follows:—industrial building, $6,622,500; business building, $5,387,700; and residential building, $3,405,900. The apportionment of contracts awarded in Canada by provinces during January, 1927, was:—Prairie Provinces, $6,353,100; Ontario, $4,356,400; Quebec, $3,885,200; British Columbia, $2,083,400 and the Maritime Provinces $93,700.

The "contemplated new construction" in Canada during January, 1927, according to the same *Review*, totalled $71,056,600, $10,138,300 of this amount being for residential building; $26,012,200 for business building; $19,955,500 for industrial building, and $14,950,600 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering).

Strikes and Lockouts

The time loss due to industrial disputes in January, 1927, was slightly greater than during December, 1926, but less than during January, 1926. There were in existence during the month eight disputes, involving 261 workpeople, and resulting in a time loss of 4,020 working days, as compared with eight disputes in December, involving 167 employees, and resulting in a time loss of 3,778 working days. In January, 1926, there were on record eleven strikes, involving 823 workpeople, resulting in a time loss of 9,769 working days. One of the strikes commencing prior to January, 1927, terminated during the month, and the one strike recorded as commencing during January also terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts, affecting 134 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices advanced somewhat due mainly to seasonal increases. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.37 at the beginning of January, as compared with $11.18 for December, 1926; $11.63 for January, 1926; $10.77 for January, 1925; $10.78 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $15.30 for January, 1920; $12.42 for January, 1918; and $7.73 for January, 1914. Butter showed a substantial seasonal advance, while less important advances occurred in the prices of eggs, beef, milk, pork, rolled oats, evaporated apples and in granulated and yellow sugar. The prices of bacon, lard and prunes were somewhat lower. Including the cost of fuel and rent with that of foods the total budget averaged $21.59 at the beginning of January, as compared with $21.41 for December, 1926; $21.96 for January, 1926; $21.09 for January, 1925; $21.23 for January, 1924; $21.13 for January, 1923; $21.52 for January, 1922; $25.30 for January, 1921; $26.92 for July, 1920 (the peak); $24.15 for January, 1920; $19.80 for January, 1918; and $14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was practically unchanged at 150.6 for January, as compared with 150.5 for December, 1926; 163.8 for January, 1926; 165.5 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May, 1920 (the peak); 233.4 for January, 1920; 206.1 for January, 1919; and 191.7 for January, 1918. In the grouping according to chief component materials three of the eight main groups advanced and five declined. The Vegetables and their Products group advanced, mainly because of higher prices for grains, flour and milled products. Advances in the prices of live stock, butter and milk which more than offset the declines in the prices of eggs and furs, caused an increase in the Animals and their Products group. The Fibres, Textiles and Textile Products group also advanced, the lower prices for silk and wool being more than offset by the higher prices for raw cotton and manila rope. The groups which declined were: the Iron and its Products group, chiefly because of declines in the prices of steel sheets and wire; the Non-Ferrous Metals group, due to declines in the prices of copper, lead, tin and antimony, which more than offset the advances in the prices of silver and spelter; the Chemicals and Allied Products group, due to declines in the prices of sulphuric acid and glycerine; the Wood, Wood Products and Paper group; and the Non-Metallic Minerals and their Products group.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF JANUARY, 1927

DURING the month of January the Department received a second interim report from the Board of Conciliation and Investigation constituted to inquire into certain matters in dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and certain of their employees, being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees; also a report was submitted to the Department by the Board established to deal with differences between the Corporation of the City of New Westminster and certain of its employees in the Municipal Fire Department, members of the City Fire Fighters' Union.

Application Received

During January an application for the establishment of a Board was received from employees of various shipping interests of the port of St. John, N.B., being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. A Board was established, Mr. J. T. Foster, of Montreal, P.Q., being appointed a member on the recommendation of the employees concerned, and Mr. J. H. Lauer, also of Montreal, being appointed by the Minister in the absence of a recommendation from the employers. The Board had not been completed at the close of the month.

Second Interim Report of Board in Dispute between the Shipping Federation of Canada and the Canadian Pacific Steamships, Limited, and their Checkers and Coopers.

The Minister of Labour received on January 17, 1927, a second interim report of the Board of Conciliation and Investigation to which had been referred for adjustment various matters in dispute between the Shipping Federation of Canada and Canadian Pacific Steamships, Limited, and certain of their employees, being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was constituted as follows: Mr. Farquhar Robertson, Montreal, chairman, appointed on the joint recommendation of the other two members, Sir William Stavert, Montreal, appointed by the Minister in the absence of a recommendation from the employers, and Mr. J. T. Foster, Montreal, nominee of the employees. The dispute related to the employees' demand for increased wages and changed working conditions, and 225 employees were stated to be directly affected. The first interim report of the Board, which was received on November 17, 1926, was accompanied by a letter written on behalf of the employers concerned, stating that the shipping interests undertook to meet their employees in or about the month of March, 1927. The text of the first interim report appears in the December, 1926, issue of the Labour Gazette, page 1189. The second interim report states that the Board stands adjourned, pending the outcome of the negotiations between the parties. The text of the second interim report follows:

Second Interim Report of Board

To the Honourable
The Minister of Labour,
Ottawa, Canada.

CONCILIATION BOARD HELD UNDER THE PROVISIONS OF THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

In the matter of the Checkers, Members of Lodge 1237, Brotherhood of Railway and Steamship Clerks, Freight Handlers, and Express and Station Employees, and the Employing Steamship Lines.

The Board.—Farquhar Robertson, Chairman; Sir William Stavert, representing employers; John T. Foster, representing employees.

Your Board, as above outlined, having been convened on the 12th day of January, at 2.30 p.m., at 36 Board of Trade Building, Montreal, to consider its proper functioning in the above dispute, begs leave to report as follows:

In view of the proposal that your Board should proceed to St. John, and hold an inquiry into the differences as between the Association of Checkers and their workers on the one hand, and certain specified steam-

ship interests on the other, in respect to wages and working conditions at that port, following the inquiries which have been already held there, it was felt as the Board was constituted to consider such differences at the Port of Montreal, it would not have jurisdiction in the Port of St. John, if only because while the workers may be identical, or practically so, there are other shipping interests and different outside conditions in the latter port.

In view of such opinions therefore, and of the intention of the Chairman, Mr. Farquhar Robertson, to be absent from Canada until some time in the early part of April, it was the unanimous decision of your Board that it should stand adjourned at the call of the Chair pending the outcome of a meeting of representatives of the men and shipping interests, which is expected to take place some time in the month of March by arrangement between the parties, when your Board may reconvene, and consider such outcome, together with directions from the Honourable the Minister of Labour within his pleasure.

The above report is hereby certified to be correct.

(Sgd.) FARQUHAR ROBERTSON,
Chairman.

(Sgd.) W. E. STAVERT,
Representing Employers.

(Sgd.) J. T. FOSTER,
Representing Employees.

Dated at Montreal, this thirteenth day of January, in the year of Our Lord, One Thousand, Nine Hundred and Twenty-seven.

Report of Board in Dispute between the Corporation of the City of New Westminster and its Fire Fighters.

A report was received from the Board of Conciliation and Investigation to which had been referred for adjustment a dispute between the Corporation of the City of New Westminster and certain of its employees in the Municipal Fire Department, members of the City Fire Fighters' Union. The dispute related to wages, working conditions, etc. The Board was composed as follows: Rev. Dr. Albert M. Sanford, Principal of Columbian College, New Westminster, B.C., chairman, appointed on the joint recommendation of the other two members; Mr. William James Whiteside, of New Westminster, B.C., and Mr. R. P. Pettipiece, of Vancouver, B.C., nominees of the city and employees respectively. As a result of the efforts of the Board, an amicable settlement of the dispute was reached, involving an increase of wages of $10 per month to the employees and several improvements in working conditions. The Board's report was accompanied by the agreement between the parties to the dispute. The text of the report and of the agreement follows.

Report of Board

NEW WESTMINSTER, B.C., Jan. 26, 1927.

H. H. WARD, Esq.,
Deputy Minister of Labour,
Ottawa.

SIR,—We, the undersigned members of the Board of Conciliation and Investigation appointed to consider differences between the Corporation of the City of New Westminster and certain of its employees in the Municipal Fire Department, members of the City Fire Fighters Union No. 256, beg leave to report as follows:—

After evidence had been received and visits had been made to the Fire Halls of the Municipalities of Point Grey and South Vancouver and the Cities of Vancouver and New Westminster, your Board succeeded in bringing together the parties to the dispute, with the result that an Agreement, a copy of which we enclose, was entered into with the unanimous vote of the City Council of New Westminster and the unanimous approval of the members of the Fire Fighters Union, No. 256.

We desire to acknowledge the courtesy of the representatives of the parties to the dispute in all their relationships with the Board and our appreciation of the consent given to the Agreement by those concerned.

Respectfully submitted.

Board of Conciliation and Investigation.

(Sgd.) A. M. SANFORD.
(Sgd.) W. J. WHITESIDE.
(Sgd.) R. P. PETTIPIECE.

An agreement made this twenty-first day of January, in the year of our Lord one thousand nine hundred and twenty-seven. Between: The Corporation of the City of New Westminster, of the First Part, and Fire Fighters' Union, Number 256, of the Second Part.

Whereas a dispute having arisen between The Corporation of the City of New Westminster and certain of its employees, members of the Fire Fighters' Union, Number 256, and the

dispute having been referred under the "Industrial Disputes Investigation Act, 1907," to a Board constituted under that Act, consisting of Dr. A. M. Sanford, R. Parm. Pettipiece and W. J. Whiteside, and the said Board having brought together the parties to the dispute in conference, the following settlement was arrived at, namely:—

(1) The City of New Westminster hereby agrees to grant an increase of Ten Dollars ($10) per month to each of the Fire Fighters of the Department, said increase to date from the first of January, 1927. The Mayor and Council also agree to recommend to the Mayor and Council of 1928 a further increase of Five Dollars ($5) per month to each of the Fire Fighters concerned, said increase, if granted, to begin on the first of January, 1928. This does not preclude the Fire Fighters from asking for a larger increase at that time if they so desire.

(2) The City agrees to grant to each man a holiday of two weeks instead of the one week granted annually in recent years.

(3) The City further agrees to provide counterpanes, sheets and pillow-cases for the use of the men in Fire Halls, and to be responsible for the laundering of the same.

(4) In regard to lockers, trap-doors to keep smoke out of the living quarters, better lights, and more conveniences for the tidiness and comfort of the men, the Mayor and Council agree to vote an unspecified sum of money which shall be spent by the Fire Committee after consultation with the Chief of the Department and representatives of the Fire Fighters' Union as to the ways wherein the money may be spent to the best advantage.

(5) The members of the Fire Fighters Union No. 256, through their appointed representatives, accept these terms of agreement and assure the City of their purpose to render efficient and loyal service.

Adopted by the City Council January the twenty-first, 1927, and signed on their behalf by

(Sgd.) A. W. GRAY, *Mayor.*
" W. H. KEARY, *City Clerk.*

WITNESSES:
(Sgd.) A. M. SANFORD,
" W. J. WHITESIDE,
" R. P. PETTIPIECE.

Signed by the representatives of Fire Fighters' Union No. 256:

(Sgd.) WILLIAM MATTHEW, *President,*
" THOS. A. BRIGGS, *Sec.-Treas.*

WITNESSES:
(Sgd.) A. M. SANFORD,
" W. J. WHITESIDE,
" R. P. PETTIPIECE.

STRIKES AND LOCKOUTS IN CANADA DURING JANUARY, 1927

THE number of strikes and lockouts in existence during January was 8, the same number as in December. The time loss for the month was less than during January, 1926, being 4,020 working days, as compared with 9,769 working days during the same month in 1926.

Date	Number of disputes	Number of employees involved	Time loss in working days
Jan., 1927	8	261	4,020
Dec., 1926	8	167	3,778
Jan., 1926	11	823	9,769

The Record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 161 workpeople, were carried over from December, and one dispute commenced during January. Two of the disputes recorded as being carried over from December, the strike of electrotypers at Toronto, Ont., commencing December 20, 1926, and the strike of coal miners at Newcastle Creek, N.B., commencing December 14, 1926, were not reported to the Department in time for inclusion in the January issue of the LABOUR GAZETTE. One of the strikes commencing prior to January terminated during the month, and the strike which commenced during January also terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts, as follows: Fur workers, Winnipeg, Man.; ladies' clothing workers, Toronto, Ont.; men's clothing workers, Montreal, P.Q.; cap makers, Toronto, Ont.; men's clothing workers, Toronto, Ont.; and electrotypers, Toronto, Ont. A dispute involving structural steel workers at Calgary, Alberta, during January has been reported to the Department but no information as to its nature or extent has yet been received.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Informa-

tion is available as to four such disputes, namely: moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, P.Q., March 24, 1925; men's clothing workers, St. Hyacinthe, P.Q. (formerly of Montreal), March 19, 1926; and metal polishers at Sackville, N.B., March 15, 1921.

The strike which commenced during January was for improved working conditions. The two strikes which terminated during the month were both substantially in favour of the employees.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

CAP MAKERS, TORONTO, ONT.—In this dispute, which caused a cessation of work on August 27, 1926, involving upwards of ten employees, there was a demand for a union agreement providing for employment of members of the union only. The employer refused and the employees went on strike, the employer replacing them, and reporting a full staff before the end of the year. At the end of January there were, however, a number of employees still on strike.

MEN'S CLOTHING WORKERS, MONTREAL, P.Q.—This dispute, which commenced July 28, 1926, to secure union wages and working conditions in non-union shops, remained unterminated at the end of January, there being two establishments still involved. The larger factories and most of the other establishments had settled with the union in August or later, agreeing to the conditions of the union. At the end of January there were reported to be only thirty strikers involved.

ELECTROTYPERS, TORONTO, ONT.—This dispute, commencing on December 20, 1926, was the result of a demand for the renewal of the union agreement which the employer refused on the ground that the union had not kept the agreement in the past. Shortly afterwards the firm discharged several employees for engaging in union activity and the union called out the other members employed there. The employer was reported to have partially replaced the strikers during January.

STRIKES AND LOCKOUTS DURING JANUARY, 1927

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to January, 1927.			
MINING, NON-FERROUS SMELTING AND QUARRYING—			
Coal miners, Newcastle Creek, N.B.	27	675	Commenced Dec. 14, 1926, against discharge of employees. Work resumed Feb. 1, 1927, all employees except one reinstated.
MANUFACTURING—			
Fur and leather products (other than boots and shoes):			
Fur workers, Winnipeg, Man...	25	250	Commenced Sept. 25, 1926, for shorter hours and recognition of union. Unterminated.
Clothing (including knitted goods):			
*Ladies' clothing workers, Toronto, Ont.	6	150	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing workers, Montreal, Que.	30	720	Commenced July 28, 1926, for union wages and working conditions in non-union shops. Unterminated.
*Cap makers, Toronto, Ont....	13	325	Commenced Aug. 27, 1926, for employment of union members only. Unterminated.
Men's clothing workers, Montreal, Que	50	1,250	Commenced Sept. 25, 1926, for recognition of union. Unterminated.
Printing and Publishing:			
Electrotypers, Toronto, Ont..	10	250	Commenced Dec. 20, 1926, against discharge of employees. Unterminated.
(b) Strikes and lockouts commencing during January, 1927.			
TRADE—			
Teamsters, Charlottetown, P.E.I.	100	400	Commenced Jan. 6, 1927, for an extra coal shoveller. Terminated Jan. 11, 1927, in favour of employees.

*Reports indicate that the strikers have been replaced, but there are still a number of employees out and on the strike benefit list of the union.

Coal Miners, Newcastle Creek, N.B.—This, the second dispute in the same mine recently, commenced December 14, 1926, the employer having discharged some miners, alleging that they were advocating that the agreement settling the first dispute should be broken by the miners. It has been reported that the two miners discharged were the presiding officer and the secretary of the union, and a committee of the union opened negotiations with the employer, who thereupon discharged members of the committee. The other members of the union employed in the mine then ceased work and communicated with the Minister of Labour with the object of initiating proceedings under the Industrial Disputes Investigation Act, 1907, as amended, the Province of New Brunswick having passed the necessary enabling legislation (Labour Gazette, June, 1926, page 549). The Minister then proposed that the parties to the dispute should re-open negotiations, and at the end of January a settlement was reached, all the employees except one being reinstated, work to be resumed February 1, 1927.

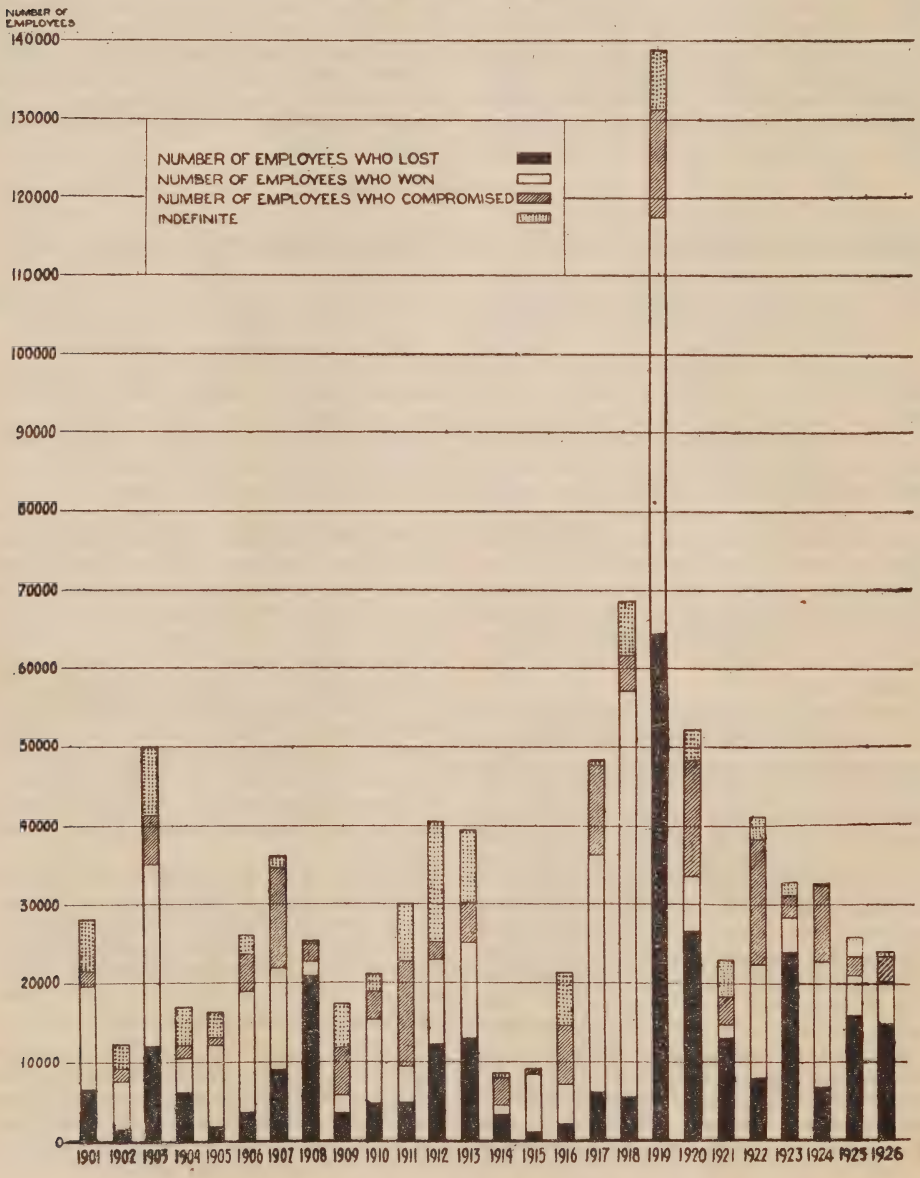
Teamsters, Charlottetown, P.E.I.—On January 6, 1927, approximately one hundred teamsters ceased work in the hauling of coal because the coal dealers had refused to supply a man to shovel coal from the far end of each car as had been done by one of the dealers. After four days the dealers agreed to this, and it was arranged that in future when a dispute arose a period of three days would be allowed for negotiations between the firm involved and their employees before a strike would be called.

STRIKES AND LOCKOUTS IN CANADA AND OTHER COUNTRIES, 1926

THE year 1926 was marked by less disturbance from strikes and lockouts than any year since 1916, the number of disputes and numbers of employees involved being about the same as in each year from 1923 to 1925, but the time loss in man workings days, less than 300,000, the lowest figure since 1916, and less than in any year since 1900, except 1902, 1904, 1905, 1915, and 1916. The notable feature of the year 1926 was the relatively small amount of time loss due to strikes or lockouts in coal mines, in contrast with conditions from 1922 to 1925 inclusive, a period marked by not only a large number of disputes in coal mines but by a series of disputes involving large numbers of miners for long periods of time.

The chief disputes during 1926 occurred in establishments manufacturing clothing and boots and shoes, nearly two-thirds of the time loss for the year appearing in these two industrial groups. There was also a substantial amount of time loss in logging and in mining. The most important disputes during the year were those of boot factory employees at Quebec from May to September, involving 3,000 employees and causing a time loss of 88,677 working days; men's clothing factory workers at Montreal, involving 5,000 employees from July 26 to the end of the year, most of them having secured their demands and resumed work in a few weeks; lumber workers in the district about Port Arthur, Ont., involving 700 employees and causing a time loss of 30,400 working days. In coal mining there were twenty disputes, some involving large numbers of miners, but these lasted only a few days and so did not cause very much time loss.

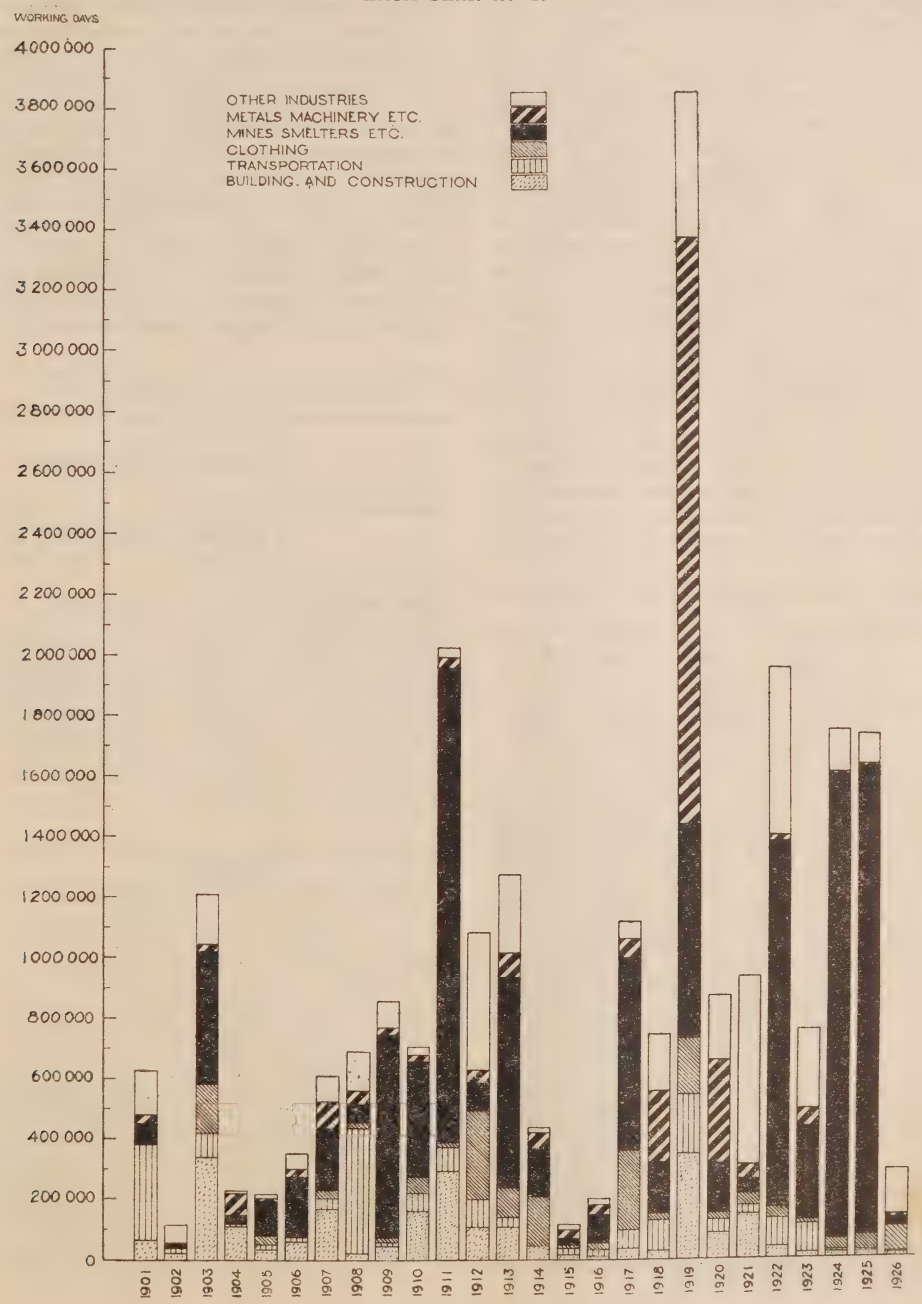
Since its establishment toward the end of 1900 the Department of Labour has maintained a record of strikes and lockouts in Canada, publishing in the Labour Gazette each month a complete list of those in progress, so far as available, with particulars as to the nature and result of each dispute. Early in each year a review of the previous year has been given, including statistical tables analyzing the data, since 1912 including a complete list of the disputes on record during the year. As the monthly statements in the Labour Gazette are necessarily of a preliminary nature the annual review constitutes the revised record for the year. A special report on "Strikes and Lockouts in Canada 1901 to 1912," issued in 1913, contained a complete list of strikes and lockouts for that period with analytical tables and the annual reviews in the Labour Gazette have brought the lists of disputes and analytical tables down to date each year.



The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical tables, therefore, strikes and lockouts are recorded together, the term dispute being used with reference to either.

A strike or lockout included as such in the records of the Department, is a cessation of work involving six or more employees and lasting one working day or more. Disputes of less than one day's duration and

disputes involving less than six employees have not been included in the published record unless a time loss of 10 days or more is caused. A separate record of such disputes involving less than 10 days time loss is maintained in the Department. During 1926 there was one such dispute, involving 3 employees for one half day, making a time loss of one and a half working days.



The figures in this report are inclusive of all strikes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. So far as concerns figures given with respect to duration of strikes, numbers of employees concerned, etc., it is impossible always to secure exact information, but the estimate

RESULTS OF STRIKES AND LOCKOUTS ACCORDING TO NUMBERS OF EMPLOYEES INVOLVED IN 1901-1926

made in such cases is the result of painstaking methods in the collection of data, and, with increasing experience in dealing with the subject it is believed that the statistics indicate the conditions with reasonable precision. The estimate of time loss is reached by multiplying the number of working days during which each strike lasted by the number of employees involved in the dispute from time to time so far as known.

LOSS IN WORKING DAYS THROUGH STRIKES AND LOCKOUTS BY GROUPS OF INDUSTRIES EACH YEAR 1901-26

The accompanying chart of the time loss in working days by groups of industries for each year back to 1901, shows that in mining considerable time loss occurred in 1903, 1909, 1910, 1911 and 1913, and again in 1917, 1919, 1922, 1923 and 1924, with very little time loss for 1926. In metal trades no great time loss appeared except in 1919, when the strikes in the metal trades in various cities and the general strike in Winnipeg in sympathy with the metal trades' strike there, caused a time loss of about two million days. In 1918, 1920 and 1923, however, the time losses (in these trades) were larger than in other years. In building and construction considerable time loss appeared in 1903, 1907, 1911 and 1919. In transportation there was considerable time loss only in 1901, due to a strike of trackmen, in 1908, due to a strike of railway shop machinists and in 1918 and 1919 due to numbers of strikes in street railway operation, as well as among freight handlers, in local transportation, cartage, etc. The item "other industries" for 1926 included a comparatively large time loss in boot and shoe manufacturing.

From the chart showing results of the settlements arrived at it appears that the majority of employees were successful or substantially successful in 1905, 1906, 1915, 1917 and 1918, periods of steadily rising prices and expanding business, but were unsuccessful in 1908, 1919, and 1920, years of uncertainty in industry.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. In addition to the list in Table 10, information is available as to the following disputes of this nature, metal polishers, Sackville, N.B., March 15, 1921; moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, March 24, 1925; hat and cap makers, Toronto, June 16, 1925; tailors, Toronto, Nov. 16, 1925; moulders, Guelph, June 2, 1924; moulders, Owen Sound, Jan. 19, 1925; moulders, Sarnia, March 3, 1925; upholsterers, Montreal, June 23, 1925. All but the first three, however, lapsed during 1926.

TABLE I.—RECORD OF STRIKES AND LOCKOUTS BY YEARS

Year	Number of disputes		Disputes in existence in the year		
	In existence in the year	Beginning in the year	Employers involved	Employees involved	Time loss in working days
1901	104	104	273	28,086	632,311
1902	121	121	420	12,264	120,940
1903	146	146	927	50,041	1,226,500
1904	99	99	575	16,482	265,004
1905	89	88	437	16,223	217,244
1906	141	141	1,015	26,050	359,797
1907	149	144	825	36,224	621,962
1908	68	65	175	25,293	708,285
1909	69	69	397	17,332	871,845
1910	84	82	1,335	21,280	718,635
1911	99	96	475	30,094	2,046,650
1912	150	148	989	40,511	1,099,208

The following notes deal with the chief features in strikes and lockouts during the year 1926.

Logging.—The four disputes in the logging industry involved 1,250 employees, causing a time loss of 32,230 working days. All these disputes were to secure increases in wages and all but one were partially or substantially successful. The principal dispute was one in the vicinity of Port Arthur, Ont., involving 26 employers and about 700 employees, between September 16 and November 8, causing a time loss of 30,400 days. This dispute was to secure increases in wages and better working conditions, and from time to time various employers agreed to increase the wages but not always to the amount demanded, namely, $60 per month.

TABLE IV.—STRIKES AND LOCKOUTS, 1926, BY DURATION

Period of Duration	Disputes		Number involved	Time loss	
	Number	Per cent of total	Employees	Working days	Per cent of total
Under 5 days	30	38·9	5,297	10,362	3·5
5 days and under 10	11	14·3	7,363	33,889	11·4

Mining.—All disputes in the industry occurred in coal mines, being 20 in number involving 8,895 employees, causing a time loss of 30,135 days. Only two of the disputes involved a large number of men and only one of the disputes lasted more than a few days. A number of these were strikes in Nova Scotia to prevent the employment of miners who were not members of the United Mine Workers of America, which had an agreement with the employers, or miners who were members of another organization. These were substantially successful. The only dispute lasting more than a few days was that involving coal miners in the neighbourhood of Edmonton, Alta., lasting from July 1 to the end of August, the miners demanding an increase in wages and the recognition of their union. The employers refused the latter demand on the ground that this union had become affiliated with a new organization, and also refused the wage increase. Shortly afterwards some of the mine operators settled with their employees on the basis of the same wages and working conditions as before the strike, without recognition of the union, and later employees returned to the other mines under similar conditions.

Manufacturing.—Most of the disputes in this industry occurred in establishments connected with the manufacturing of men's clothing, furs and boots. Nearly all of these disputes were to maintain union conditions, to secure union wage scales and working conditions, or to secure union agreements and recognition of the union. The most important of these dipsutes was in Montreal, where the Amalgamated Clothing Workers called out on strike at the end of July all the workers under its jurisdiction, in order to maintain the wages and working conditions provided for in agreements already in force and to secure agreements in other establishments. A number of employers were reported to be violating the terms of the agreements, especially by sending out work to non-union contract shops. As a result of the dispute the majority of the establishments entered into agreements with the union within a short time, and from time to time before the end of the year other establishments followed, and at the end of the year it was reported that there were only two employers having a dispute with the union. During the year both at Montreal and Toronto there were a number of strikes against violations of agreements in men's clothing factories. There were disputes involving two women's clothing factories and there were disputes involving corset makers, cap makers, millinery workers, and embroidery workers.

There were also a number of disputes, involving a relatively small number of employees for a few days, in saw mills, sash and door factories, printing establishments, foundries, etc. One of these involved 40 pressmen and bookbinders in an alleged lockout, the employer having made an agreement with another organization to employ only its members, dismissing those employees who would not join it. The unions to which the dismissed employees belonged did not call off the dispute until the middle of September.

A dispute involving moulders in Vancouver and New Westminster, B.C., lasted from April to August, the employees demanding an increase in wages from $5.70 per day to $7. Through the mediation of the Fair Wages Officer of the Department of Labour a compromise was reached at $6 per day.

Construction.—The most important disputes in this industry occurred at Vancouver, carpenters attempting to secure a 5 day week instead of a 5½ day week of 44 hours. Employees in certain other building trades went on strike in sympathy with the carpenters. Through the mediation of the Fair Wages Officer of the Department of Labour a compromise was reached, the carpenters receiving an increase of 50 cents per day, the 44 hour week to be continued. Painters in Vancouver also went on strike for an increase in wages of $1 per day and for the employment of union members only. Through the mediation of the Fair Wages Officer of the Department of Labour some of the employers granted these demands but others refused and replaced the strikers.

Transportation and Public Utilities.—The only disputes in this industry were those involving longshoremen, none of them lasting more than a few days nor involving a large number of employees.

Service.—The only disputes in this group involved stage hands and musicians in theatres. One of these occurred in Vancouver involving stage hands, another involving musicians in the same theatre who went out in sympathy with the stage hands. After some months the theatre concerned closed down. The other dispute involved musicians at Windsor and Walkerville, Ont., demanding changes in wages and hours. Within two days the employees won their demands.

Longshoremen	Port Alfred, P.Q.	Increase in wages	Negotiations	Men partially successful.	June 10	June 14	1	200	600	3
							4	590	2,100	

SERVICE—										
Recreational;										
Stage hands	Vancouver, B.C.	Alleged violation of agreement.	Theatre closed down	Indefinite	Jan. 9	May 15	1	7	756	108
Musicians	Vancouver, B.C.	Sympathy with strike of stage hands.	Theatre closed down	Indefinite	Jan. 11	May 15	1	6	648	108
Musicians	Windsor and Walkerville, Ont.	Increase in wages and shorter hours.	Negotiations	In favour of employees.	Sept. 1	Sept. 3	1	11	22	2
							3	24	1,426	

(*a*) Each party alleged the other had violated the agreement, the employees ceasing work.

(*b*) Employment conditions no longer affected, but union has not yet called off the strike.

(*c*) Most of the establishments and employees affected signed union agreement shortly after strike began.

(*d*) Lapsed at the end of July.

(*e*) Lapsed at the end of November.

(*f*) Lapsed in September.

(*g*) Increase in wages later, on some work, was understood to be likely and was received in September.

Addendum on Strikes and Lockouts in Other Countries 1919-1926

The accompanying table gives the principal figures as to strikes and lockouts in other countries as compared with Canada since 1919, showing the number of disputes (strikes and lockouts), the number of employees involved in stoppages of work and the time loss in man working days in those countries for which such figures are available.

In some of these countries figures as to strikes and lockouts are published separately, but in the table here given have been included together. The practice varies greatly in the various countries also in regard to other points. In some cases the number of strikes and lockouts shown for a year is the number beginning during the year, in other cases it is the number ending during the year, and in still other cases it is the number in existence during the year, including those carried over from the previous year, with those beginning during the year.

The figures as to the number of employees involved published by some countries show not only the number of employees directly involved, but also the number of those indirectly involved, that is thrown out of work by disputes to which they were not parties, but exact information as to these points is not always given. In the table given herewith the column showing numbers of employees involved includes figures for the numbers directly involved, or the total number directly and indirectly involved according to the method adopted by the country in question.

For some countries, figures as to time loss, that is the number of man working days lost, are not given, or are given only by years and not by months. Footnotes to the table indicate the nature of the statistics with reference to the above points. Many countries publish these statistics only once each year or less frequently, the figures being issued in some cases after an interval of some length.

A table of figures as to strikes in China is added, but is the only example of statistics of strikes and lockouts compiled by other than a governmental authority. This table is taken from a study of industrial disputes in China from 1918 to 1925 made by Ta Chen, Assistant Professor of Sociology, Tsing Hua College, Peking, an account of which was published in the October, 1926 number of the *Monthly Labour Review* issued by the United States Bureau of Labour Statistics. As no official statistics on this subject were available, the information was secured chiefly from the newspapers published in the principal cities, that

for the period 1918-1923 being secured chiefly from one Shanghai daily paper, the *Shun Pao*, the oldest newspaper printed in the Chinese language. Professor Ta Chen states that the strike as a method for improving the workers' condition is still new in China. It is understood that the figures cover the strikes of importance in recent years and the accompanying table is the summary table published. Reference is made to the "May 30, 1925, affair in Shanghai" which was a series of strikes constituting something in the nature of a general strike in sympathy with a strike of 55,000 cotton mill employees for recognition of their union. There occurred anti-foreign riots and demonstrations resulting in deaths of Chinese and foreigners. The cotton mill employees secured recognition.

ANNUAL REPORT OF LABOUR DEPARTMENT OF QUEBEC

THE Department of Public Works and Labour of the Province of Quebec recently published a report covering the operations of the twelve-month period ended June 30, 1926. An account of the various functions of this Department was given in the LABOUR GAZETTE, April 1925, page 354. These functions include the supervision of all proceedings under the Quebec Trades Disputes Act; the inspection of industrial establishments from the standpoint of the worker's safety and health; the carrying out of the policy of the provincial government requiring the payment of fair wages for work performed under government contracts; superintending licensed registry offices for domestic servants; administering the Boiler Inspection Act; superintending the inspection of foundries; and supervising juvenile employment by means of educational certificates issued to children under 16 years of age.

The Deputy Minister, Mr. Louis Guyon given an encouraging view of the Department's work:—"Since 1888," he says, "our Department has carried on its work of reform, convinced of the usefulness and great humanitarian and economical value of its mission and confident of having the approval of the heads of industries, whose intelligent co-operation has now made us forget the difficulties of the first years." He emphasizes the humanitarian aspect of the work. "To mention only the laws bearing solely upon the welfare, health and safety of workmen in the industrial establishments, measures which were welcomed at the time as a deliverance and a guarantee for the future, it is undeniable that factories and small workshops even are now organized with much greater care for the workmen's health and comfort."

The increase in population and in the number of factories and the concentration of labour in large towns have added to the duties of the Labour Department, but the chief factor in its development is stated to have been the constant demands for legislation that have been presented by labour organizations in the province. It is claimed that the Department now represents the principle of right relations as between employers and workpeople, while industrialism is "ever more absorbed by economic problems and competition." In regard to the recent application in the province of the principle of minimum wages for female employees, the Deputy Minister says:—"Another rung in the ladder of reforms was that of the minimum salary of girls and women employed in industries; a measure which is receiving unanimous public approval. Its application is attended with many difficulties and it will have to be applied with every moderation to be successful. The spirit of justice characterizing the relations between the heads of industries and the workmen of our Province promises the success of this important reform."

A force of twelve male and three female inspectors is maintained to secure the enforcement of the Industrial Establishments and Public Buildings Act. The inspectors also devote considerable time to the registration of children between the ages of 14 and 16, who are forbidden to work in factories unless they hold school certificates. The total number of children registered under this provision during the twelve months covered by the report was 2,562, of whom 1,982 were in Montreal, 165 in the district around Montreal, and 415 were in Quebec City and district.

Notice of accidents were received by the Department during the year as follows:—Fatal accidents, 36 (of which 24 were in the Montreal division); serious accidents, 126; and slight accidents, 1,203. There were also 100 unclassified accidents reported from the Eastern Townships.

The Stationary Engineers' Branch reported a total of 6,223 new certificates and graduation for engineers of all classes and for firemen.

The inspection of boilers is now carried on more thoroughly than in the past. The report refers to recent action that has been taken to bring Quebec into line with the other provinces in the matter of boiler inspection, and so to put an end to the once common practice of selling second-hand boilers which are bought by inexperienced users and have later to be condemned by the inspectors. "The reports of our inspectors," it is stated, "are full of not very edifying details of the frauds of the sellers of old boilers."

The report of the Electricians' Branch notes a cessation of accidents due to defective installations in public buildings and industrial establishments, the improvement being attributed to the higher qualifications now required for electricians' certificates. Further "by supplying an excellent inspection service free to churches, schools and religious institutions and thus affording greater protection to human life, the government has accomplished a work of great interest to the public."

The report pays a tribute to the work of the Employment Service, which, it states, "is

contributing so largely to the economic welfare and social peace of the Province." In accordance with the present policy of the Department no new licenses were granted for licensed registry offices. It is anticipated that most of the work of these offices will be absorbed in time by the Provincial Employment Service, leaving only a few licensed registries to do business with foreign workmen. Municipalities are now imposing a tax on private agencies, and municipal collectors, aided by the police, will henceforth take a share in their control. Under the former system the supervision of these concerns was increasingly difficult. There are five employment offices, which are situated at Montreal, Quebec, Sherbrooke, Three Rivers and Hull. Judged by the reports of these offices industrial conditions in the province were very satisfactory during the period reviewed. The number of workpeople placed in positions during the twelve-months' period was 23,617, the highest yet reached by the Service. Building operations were the largest contributors of business, followed in order by lumbering, erection of hydro-electric plants, railway maintenance, and by the clothing, shoe, textile and rubber industries. The Service now makes use of the services of agent or solicitors, who last year visited over 2,000 employers, and from them numerous applications for workpeople were received.

The Fair Wages officer, Mr. Alfred Robert, intervened during the year in a case involving carpenters and joiners employed by subcontractors on the new Montreal Court House, The workmen demanded an hourly rate of 65 cents, which was finally agreed to by the employers. A complaint by painters employed on the Bordeaux Gaol was also adjusted satisfactorily.

Complaints were received during the year that certain hotel proprietors were violating the law which requires that employees shall have one day of rest in each week, and the Inspector of Hotels and Restaurants succeeded in securing its observance.

The report of the registrar of councils of Conciliation and Arbitration under the Quebec Trade Disputes Act notes a decline in the number of disputes in the province. An arbitration commission was appointed in connection with a dispute between the Quebec Manufacturers' Association and the Brotherhood of Leather Cutters, the Shoe Lasters' Protective Union and the National Brotherhood of Shoemaking Machinists. The commision, composed of representatives of both parties, with an independent chairman, failed to reach an agreement and presented majority and minority reports. The registrar intervened also in a dispute involving the employees in the Montmorency Falls cotton mills.

An account of the Quebec Trades Disputes Act was given in the Supplement to the LABOUR GAZETTE, March 1925, entitled "Government intervention in Labour Disputes in Canada," as follows:—

The history of statutory provision for conciliation or arbitration in industrial disputes in the province of Quebec shows more activity on the part of the provincial government in the settlement of disputes than in any other province. The New South Wales law served as a model for the Quebec Act of 1901 as in Ontario and British Columbia, and in 1903 an amendment was passed similar to that in Ontario in 1902, by which the registrar was authorized to endeavour to effect a settlement by conciliation in any dispute in which he was requested to do so by the employer or the employees or by the mayor of the town concerned. A further duty was imposed on the registrar in requiring him to proffer his services as mediator without waiting for a request in writing to be made to him.

The council of arbitration for railway disputes was never established, no nominations being received for members. The council of arbitration for other than railway labour disputes was organized in March, 1902, but the inaction of the employers prevented any reference of disputes under the Act until after the amendment of 1903 except in one instance, the only one in which the provision for conciliation councils was utilized. The reports on the operation of the Act state that the members of the two permanent councils of arbitration which were appointed in the years 1901 and 1909, were not acceptable to the workpeople, and in 1909 the law was amended to provide that councils of arbitration should be appointed in connection with each dispute to be referred to arbitration. The employer and employees between whom a difference had arisen were thus enabled to make nominations for one representative each on the council. No disputes, however, appear to have been referred to arbitration under the Act. The Clerk of Councils of Conciliation and Arbitration reports a few disputes each year in which he has intervened as a conciliator, his efforts being successful in many cases.

Headquarters Building for Teachers

The *Journal* of the National Education Association has the following paragraph in its issue for January, 1927:—

The Missouri State Teachers' Association recently voted to erect at Columbia a permanent headquarters building especially suited to its work. This act is a milestone, not only in the growth of a great State association, but also in the advance of the profession as a whole. It is in line with the action of the National Education Association, which owns its home in Washington, and with the Pennsylvania association, which purchased property in Harrisburg opposite the State Capitol. It foretells a day when in every State in this great Union the teachers will own a beautiful building—the home of their professional work and the symbol of their unique service to society.

RATES OF ASSESSMENT FOR WORKMEN'S COMPENSATION IN NEW BRUNSWICK IN 1927

THE Workmen's Compensation Board of New Brunswick, in conformity with the provisions of the Act, recently prepared an estimate of the assessments necessary to provide funds in each of the industrial classes covered by the Act sufficient to meet all claims for compensation payable during the ensuing year. The rates of assessment for 1927, per $100 of payroll, show a few changes from the rates for 1926 (Labour Gazette, January, 1926, page 20). These changes have significance as indicating to some extent the nature of the accident record in each group on which the assessment is based. The assessments remain unchanged from those of last year for the larger industrial groups, the coal mining rate continuing at $5; saw-mills at $4.50; logging operations at $4.25; manufacture of steel and iron products at $1.50 (bolts, nuts, nails or screws and wire at $2); steel shipbuilding and repairing at $2.50; erection of steel buildings at $7; bricklaying at $3; railway construction at $3.50; railway operation and maintenance at $1.50, etc.

The principal changes in the rates for 1927 as compared with 1926 are as follows:—

Stone dressing or cutting, marble works or stone monument business—increased from 50 cents to 70 cents.

The battery service group (formerly rated at $2) and the wagon and carriage shop and blacksmith group (formerly rated at $1.25) are transferred to the Garage Repair Shop group, the rate for the latter group being raised from $1.10 to $1.25.

Bakeries, including delivery, are raised from 60 cents to 70 cents. Manufacture of biscuits, confectionery, chocolates and cocoa is now in this group.

Manufacture of beverages of all kinds, also vinegar, etc., increased from $1.50 to $2.

Sugar refineries, increased from $1.75 to $2.

Junk business (shop only), increased from $1 to $1.75.

Bill posting and erection of bill boards, laying hardwood floors when separate work, lathing, tile and marble setting (formerly 80 cents); glazing, decorating and renovating, painting (formerly 90 cents); electric wiring of buildings, installation of lighting fixtures, gas or steam fitting and plumbing—these are now classed together with a general rate of $1.

Chimney stacks, towers or blast furnaces when separate work, fire escapes, erection of windmills (formerly rated at $3) are now added to the same group as installation, erection and repairs of high steel chimneys, stacks, elevated water tanks, etc; painting high steel structures; elevated tanks, flagstaffs or steeples, this whole group being rated at $5.

Trenching less than 6 feet for gas pipes etc., reduced from $1.75 to $1.50.

Express companies, reduced from 80 cents to 60 cents.

Fishing vessels, etc., reduced from $2 to $1.75.

WORKMEN'S COMPENSATION IN BRITISH COLUMBIA

Board Explains Main Provisions of Act

THE Workmen's Compensation Board of British Columbia recently sent out to employers in the Province the following explanation on the points which form the most common subjects of inquiry in connection with the Act. The circular points out that, while during the ten years that have passed since the Act took effect employers generally have acquired a working knowledge of its provisions and of its benefits, there are still some requirements of the law which are not fully understood, particularly by those firms whose operations have but recently commenced. The explanations are as follows:—

1. Any employer engaging in an industry which is within the scope of the Act is required to register with the Board by filing an estimate of his probable pay-roll for the current year. This is necessary no matter how few employees he may have, or how short the period of their employment. Failure to do so renders him liable for the cost of all accidents occurring previous to his registration.

2. The amount of assessments required from the employer in any class depends directly upon the cost of the accidents in that particular class,

so that to the exact extent to which you prevent accidents, you reduce assessments upon your class, with a consequent saving in cost to you. You should familiarize yourself with the Accident Prevention Regulations. Failure to comply with necessary Accident Prevention requirements makes you responsible for additional assessments as well as the cost of each accident occurring as a result of such failure.

3. Assessments are based on the estimated payroll of each employer and are called up in instalments as the money is needed to pay the cost of accidents that have occurred. Only enough instalments are requested as are needed to pay for the year's accidents. These instalments do not cover any particular definite portion of the year. When the operation ceases, or the end of the year comes, an audit is made of the payrolls and an adjusted assessment is sent out for the under-payment or a credit is given for the over-payment. Proper payrolls are required to be kept for production when asked for.

4. All employers whose operations are under the Act are required to deduct from the wages of their employees one cent for each day or part of a day worked by them, and to remit the same to the Board for the credit of the Medical Aid Fund, on the first days of January, April, July and October of each year (covering the previous three month period), without any notice from the Board.

5. Your special attention is called to the "Optional Protection" clause. The employer, members of his family (defined by the Act to include wife, husband, father, mother, grandfather, grandmother, stepfather, stepmother, son, daughter, grandson, granddaughter, stepson, stepdaughter, brother, sister, half-brother, and half-sister, and a person who stood in loco parentis to the workman), or partners in a firm, are not covered under the Act except by special application. If it is desired that the employer personally, or any members of his family referred to above and employed by him, be entitled to the same benefits under the Act as are afforded the workmen, a request should be made for the proper form on which to make application for such protection. This applies only where the employer is an individual or a partnership. In incorporated companies all employees are automatically covered, including shareholders who are actively engaged in the business.

6. The Act provides that on failure to make payment of assessments when due a penalty of 5 per cent is imposed for the first month of default, and 1 per cent for each additional month thereafter, together with the costs of any accidents occurring during any period of delinquency.

7. The injured workman (except those covered by Approved Medical Aid plans), has the right to select his own doctor. Employers are requested not to interfere with this right. Should a change of doctor be desired by the workman, written permission for change must first be obtained from the Board.

8. First Aid equipment should be maintained in accordance with the First Aid Regulations, and be readily accessible at all times. Prompt use of this service will prevent trifling injuries from developing into costly claims.

9. When medical treatment is necessary the employer is required to provide the injured workman with immediate transportation to the nearest place where proper treatment is available for the particular injury sustained.

10. All accidents should be thoroughly investigated by the employer, or responsible official and his report, containing complete and accurate particulars, should be submitted at once. Information so supplied is treated as strictly confidential. The practice of permitting junior officials to complete employer's reports on accidents is dangerous. A report on your behalf favourable to a claimant is tantamount to a request to the Board to pay the cost of the accident. The person signing your reports should be a person whom you would entrust with handling your funds. The cost of claims allowed fixes absolutely the amount which it is necessary to collect from employers by way of assessments.

11. Although the term "reserves" as used in the Act has been dwelt upon in each of our annual reports and explained by circular letters sent to all employers on numerous occasions, there still persists some misunderstanding in certain quarters as to just what is embraced in this fund. It is in no sense of the term a contingency fund. It does not contain one cent of "undivided profits," or "surpluses," or are there in it any moneys set aside to meet anticipated accidents. The Act provides that "capitalized reserves" be set aside "sufficient to meet the periodical payments of compensation occurring in future years in respect of all accidents which occur during the year." The accidents which occur in any given year are required to be paid for in full out of funds collected from employers operating in the year. Employers commencing business in the years to come are therefore not required to bear any part of the burden of accidents occurring prior to the year in which they begin. Let us illustrate this point as it applies to fatal cases. A workman is killed on October 1st, 1926, leaving a wife and four young children. The pension is computed for the widow, calculated on statistical tables to be exactly sufficient, using both principal and interest, to pay her a pension of $35 per month until death or remarriage. A further sum is calculated for each child to pay it a pension of $7.50 per month until it reaches the age of 16 years, or previously dies. Those sums are added together, and the total amount of, say, $8,397.11 is forthwith taken out of current funds collected in 1926 and invested for the dependents in securities permitted under the "Trustee Act." During 1926 the widow and children are paid $195, being three months' pension, and the balance of the moneys which belong to them remains in their Pension Reserve Account, to be paid to them as required by the Act in monthly instalments through the years to come. Similar procedure is followed in permanent disability cases. The only funds in the pension reserves are moneys belonging to dependents and crippled workmen in respect of accidents which have already occurred. No "reserves" are accumulated under the Act.

WORKMEN'S COMPENSATION WITHIN THE BRITISH EMPIRE

Resolutions of Sub-Committee of Imperial Conference

THE report of the Proceedings of the Imperial Conference, 1926, which was laid before the Dominion Parliament at its opening in December, 1926, contains a section dealing with the subject of workmen's compensation, and refers to a special sub-committee which was appointed, under the chairmanship of the Secretary of State for Home Affairs, to consider the present position in regard to the Resolutions of the Imperial Economic Conference of 1923 on the subject of workmen's compensation. The text of these Resolutions appeared in the LABOUR GAZETTE of January, 1924, as follows:—

(1) *Non-resident workmen.*—That this Imperial Economic Conference, taking note of the existing restrictions in the workmen's compensation laws of certain parts of the British Empire on the payment of benefits to workmen and their dependents on the ground of non-residence in the State in which the accident happened, and having regard to the tendency of such restrictions to discourage movement within the Empire, is of opinion that no British subject who is permanently incapacitated, and no dependent of a British subject who has been killed, by accident due to his employment in any part of the Empire should be excluded from any benefit to which he would otherwise be entitled under the Workmen's Compensation law of that part of the Empire on the ground of his removal to or residence in another part of the Empire.

(2) *Seamen.*—That this Imperial Economic Conference, having had its attention drawn to cases where British sailors injured by accident while serving on ships registered in some part of the Empire have had no claim to compensation owing to the law of that part of the Empire being restricted, in its application to seamen, to accidents occurring within territorial waters or other limited area, is of opinion that the Government of any such part of the Empire should ensure that the benefits of its compensation law will extend to all accidents to seamen serving on ships registered within such part of the Empire wherever the ship may be when the accident takes place. And furthermore the Conference invites the Government of any British Colony or Protectorate where there is a register of shipping, but where legislation giving compensation rights to seamen does not at present exist, to consider the adoption of such legislation.

(3) *Aliens.*—That this Imperial Economic Conference, taking note of the disabilities imposed under the Workmen's Compensation laws of certain foreign countries on British subjects residing in those countries and their dependents, invites each Government of the Empire, regard being had to its own particular conditions, to consider the possibility of adopting in workmen's compensation legislation, the principle of reciprocity, that is, that the benefits of such legislation should be accorded to subjects of foreign countries upon the condition that and to the extent to which such foreign countries accord reciprocal treatment to British subjects.

The sub-committee came to the conclusion that with certain minor exceptions the laws of the various parts of the Empire now conform generally to the principle of Resolution I of the 1923 Conference, namely, that no British subject who is permanently incapacitated, and no dependent of a British subject who has been killed, by accident due to his employment in any part of the Empire, should be excluded from any benefit to which he would otherwise be entitled under the workmen's compensation law in force there, on the ground of removal to, or residence in, another part of the Empire. The Conference took note of the position.

With regard to Resolution II of the 1923 Conference, relating to compensation in respect of accidents to British sailors occurring outside the territorial waters of the part of the Empire in which their ship is registered, the sub-committee found that such compensation was provided for in the laws of most of the Dominions and India as well as Great Britain, but called attention to certain exceptions.

The position in regard to the treatment of aliens was reconsidered in the light of the International Draft Convention and Recommendation adopted by the International Labour Conference at Geneva in 1925. The conclusion was reached that the adoption by all parts of the Empire of a common policy based on this Draft Convention would conduce to the removal of disabilities still imposed under the workmen's compensation laws of certain foreign countries on British subjects residing in those countries and on their dependants. The Conference accordingly adopted the following resolution on this subject:—

The Conference, taking note of Resolution III of the Imperial Economic Conference, 1923, on the subject of workmen's compensation and the Draft Convention on Equality of Treatment for National and Foreign Workers as regards Workmen's Compensation for Accidents which was adopted by the International Labour Conference at Geneva in 1925, recommends that the governments of the several parts of the Empire should consider the desirability of giving effect, in so far as they have not already done so, to the principle of the Draft Convention in their workmen's compensation legislation.

As regards the administration of compensation moneys, it appeared that the courts of Great Britain and Northern Ireland, and generally speaking of the other parts of the Empire, have at present no authority to

transfer or receive for administration compensation money awarded in any part of the Empire other than their own. The Conference adopted the following resolution:—

The conference, taking note of the difficulties arising under the law relating to workmen's compensation in the administration of money awarded in one part of the Empire to beneficiaries resident or becoming resident in another part of the Empire, is of opinion that arrangements should be made between the different parts of the Empire whereby any sum awarded to such beneficiaries may, at the request of the authority by which the award is made, be transferred to and administered by the competent authority in that part of the Empire in which such beneficiaries reside. It accordingly invites the several governments of the Empire to take such steps by way of legislation or otherwise as each may consider necessary and appropriate for the purpose of promoting such arrangements.

The report of the sub-committee has been published.

PROPOSED BUILDING TRADES COUNCIL FOR NEW ZEALAND

EMPLOYERS and employees in the building trades in New Zealand recently prepared a plan for the establishment of a national council for the industry, to include all trades to which an apprenticeship has been served. The Parliament of the Dominion will be asked to enact the necessary legislation. The council would be composed of representatives of unions of employers and employees in the industry in equal numbers, with power to co-operate with experts and with Government representatives. The duty of the council would be:—

(1) To promote continuous and progressive improvement of the industry and to advance the well-being and status of all connected with it.

(2) To arrange for and carry out the registration of all now engaged in the industry, employers and employees, and to provide that no person be in future admitted to registration in the industry as an employer or employee unless he shall have first satisfied the council in a manner to be hereafter provided as to his fitness for admission to the industry.

(3) Registration to be granted to all who on the passing of the Act have been engaged in the industry in New Zealand for the six months immediately preceding, and who shall apply for such registration within six months after the passing of such Act, and, thereafter, no person to be admitted unless he can produce from the Apprenticeship Committee of the trade and district or such other tribunal as the council may appoint a certificate of his competency for admission, a probation period of one month to be allowed to tradesmen arriving in New Zealand from other countries.

(4) To gather statistics concerning the industry so as to be able to provide continuous employment for all in the industry.

(5) To arrange in conjunction with apprenticeship committees and technical schools adequate facilities for technical training for members of the industry, the improvement of processes, design and standards of workmanship, apprenticeship research and regulation of the conditions of entry into the industry.

(6) To issue information upon all matters concerning the industry.

The council would set up district councils and local councils similar to the existing apprenticeship committee. It would seek the assistance of trade unions and employers' associations, in fact, any person or organization which could provide assistance or put forward suggestions enabling the council better to carry out its functions.

Coal Movements at Montreal in 1926

The President of the Montreal Harbour Commission recently outlined the movements of the coal trade at the port of Montreal during 1926 as follows:—

Under stimulus, chiefly of the shortage and high prices occasioned by the labour troubles in the United States coal fields in 1922 and 1923, a Canadian market was opened for the first time to Welsh and Scotch anthracite. Imports, which stood at only 5,163 tons in 1921, rose in 1922 to 177,630 tons, in 1923 to 111,234 tons, in 1924 to 219,327 tons, and in 1925 to 438,841 tons. During the first six weeks of the past season, imports of British anthracite reached 106,000 tons, and there was high promise of a new import record for the full year. A complete cessation of imports from Britain, however, followed the declaration of the embargo in May upon the call of the general strike. Imports from continental Europe in the interval have brought up the total imports for the year by the St. Lawrence route to 176,000 tons, in addition to which some 16,700 tons of British and German coke were imported.

By way of offset to this shrinkage, the movement of Nova Scotia coal into the port reached proportions constituting a new high record. In striking contrast to 1925, when the industry was demoralized by the Sydney strike and only 571,246 tons of coal from these fields reached Montreal by water, the season of 1926 saw a steady procession of coal cargoes ascending the St. Lawrence to be unloaded at the wharves of the British Empire Steel Corporation. A total of 1,429,194 tons was delivered in port throughout the season.

LEGISLATIVE DEMANDS OF ORGANIZED LABOUR

Proposals Submitted to the Provincial Legislatures by Various Labour Organizations

THE general legislative program of the Trades and Labour Congress of Canada, as presented to the Dominion Government last December, was given in the last issue of the LABOUR GAZETTE. The same issue contained notes of the requests submitted to the Saskatchewan government by the provincial executive of the Trades and Labour Congress, and also of the proposals made to the government of the Province of Quebec by the Federation of Catholic Workers of Canada. The following paragraphs outline further legislative requests of labour organizations:—

Ontario Executive, Trades and Labour Congress

The legislative program of the Ontario provincial executive of the Trades and Labour Congress of Canada, was laid before Premier Howard Ferguson and his cabinet on January 18, by a delegation composed of: H. S. H. Mitchell, A. F. McLeod, Rod Plant and Miss Mary McNab, members of the provincial executive of the Trades and Labour Congress of Canada, accompanied by James Simpson, first vice-president of the Congress, and about fifty other representatives of the International Trades Union Movement.

One of the requests presented was that definite action be taken by the government to give effect to such decisions of the seven annual conferences of the International Labour Organization as come within the jurisdiction of the provincial legislature. This proposal includes in particular: (1) Enactment of an eight-hour-day law for industrial and commercial undertakings; (2) Legislation for the further protection of women and children in industrial and commercial undertakings and agriculture; (3) Co-operation with other provinces so as to make possible ratification by Canada of these draft conventions and recommendations.

Other requests were made as follows:—

(1) Amending the Ontario Mothers' Allowance Act;

(2) Consolidation of the Fire Departments Hours of Labour Act, 1920, and the Fire Departments Two-Platoon Act, 1921, into one Act;

(3) Favouring the enactment of legislation providing for compulsory right-of-way for fire fighting apparatus;

(4) Advocating pensions for permanent fire fighters;

(5) Amending the Fire Departments Two Platoon Act so as to cover all paid permanent fire fighters;

(6) Urging the investigation into alleged conditions in trade schools;

(7) Advocating the abolition of military training in schools;

(8) Urging unemployment relief measures and unemployment insurance;

(9) The enactment of necessary legislation for licensing and sanitary laws to govern barbers and barber shops;

(10) Advocating a more rigid inspection of paint-spraying machines;

(11) Amending the Minimum Wage Act so that boys in employment under 18 years of age may be included within its scope;

(12) Recommending amendments to the Minimum Wage and Factory Acts with a view to uniformity in regard to hours of labour, and age and wages of the workers;

(13) Asking amendments to the Factory Act so as to define more clearly the provisions of the law and to provide for the scope of the Act being extended to lines of manufacture not now included;

(14) Protesting against the issuance of injunctions in cases of peaceful picketing;

(15) Urging the enforcement of regulations contained in an order in council passed by the Ontario Provincial Government in regard to protection for tunnel, caisson and subway workers;

(16) Asking the Ontario Government to discontinue the practice of substituting prison-made products, for money grants, where requests are made for government support, and to limit the use of these products to non-productive government institutions;

(17) Pressing for legislation to prohibit the manufacture or making of clothing in the homes of the wage earners;

(18) Recommending that the government make an investigation into the working conditions of linemen and others in the electrical industry;

(19) Urging that the eight-hour day be established on all public works of the Ontario government;

(20) Asking that provisions be made for the strengthening and enforcing of the Fair Wage Regulations of the Ontario government;

(21) Pressing for legislation and the setting up of the necessary machinery for its administration in regard to uniformity of building by-laws in all municipalities within the province.

(22) Advocating the extension of the powers of the steam boiler inspection department and that standard regulations be provided for general use throughout the province with proper supervision and inspection of all installations;

(23) Recommending uniform standard plumbing regulations for the province;

(24) Asking that the Ontario government co-operate with the Federal Government in making effective the provisions of the proposed Old Age Pensions Act;

(25) Urging that the scope of the Factory Act be extended to take in garage employees;

(26) Requesting the Ontario Government to enact legislation requiring auto-mechanics to obtain a certificate of competency;

(27) Seeking provincial legislation, requiring liability insurance to be carried by all motor car owners;

(28) Advocating that school books be supplied free by the Ontario Department of Education;

(29) Recommending that the Minimum Wage Board issue orders on behalf of female help in hotels, etc., outside the city of Toronto;*

(30) Asking that companies operating street cars be compelled to place on their cars the best available safety fenders;

(31) Urging the abolition of the amusement tax;

(32) Amending the Municipal Act providing for an appeal from any decision rendered by a board of police commissioners;

(33) Recommending the enactment of legislation making it compulsory for employers to give public notice of a strike when advertising for employees;

(34) Advocating that bus owners and companies be designated common carriers and placed under the jurisdiction of the Federal and Provincial Railway Boards;

(35) Asking the Ontario Government to investigate conditions prevailing in financial institutions within the province as regards hours of employment;

(36) Urging the enactment of legislation for the regulation of the use of the pneumatic hammer so as to safe-guard the health and life of the operator;

(37) Favouring amendments to the Ontario Temperance Act whereby each municipality would be granted local autonomy for the sale of beer and wines in licensed places for beverage purposes and that spirituous liquors be procured from government stores under proper regulations.

Additional requests were as follows:—

(1) Advocating that all placements of immigrants be made through the Provincial Government Employment Service and that Canadian citizens be given equal opportunity in any provincial colonization scheme;

(2) Amending the Election Act to provide for: (*a*) Proportional representation; (*b*) Election day a public holiday; (*c*) one man, one vote; (*d*) Abolition of property qualifications for voting on money by-laws.

(3) Calling for the appointment of more inspectors under the Stationary and Hoisting Engineers' Act and compulsory registration of all steam plant owners;

(4) Asking that more inspectors be appointed under the Factory Act so that the law may be properly enforced;

(5) Urging that the fullest possible vocational guidance be given to those leaving school to become wage earners;

(6) Recommending that the facilities of the Ontario Savings Office be extended to all parts of the province and that the four per cent rate of interest be restored to the depositors;

(7) Favouring the compulsory imprint of name of publishing house on all printing for public circulation;

(8) Recommending government aid for the development of co-operative societies;

(9) Recommending amending the Mechanics' Lien Act;

(10) Prohibiting the employment of white girls by orientals;

(11) Favouring the abolition of private employment bureaus, and private detective agencies;

(12) Recommending that the care of unemployed be undertaken by the Federal and Provincial Governments;

(13) Recommending amendments to the Factory Act making forty-eight the maximum work hours for women and children;

(14) Urging the enforcement of the Building Trades Protection Act;

(15) Favouring the regulation of electric wiring construction;

(16) Asking for labour representation on appointed commissions, especially the Ontario

* Order No. 40 of the Minimum Wage Board, governing restaurants and refreshment rooms in cities over 30,000 population (excepting Toronto) does not apply ot hotels.

Hydro-Electric Commission and the Provincial Parole Board;

(17) Advocating public ownership and operation of all public utilities;

(18) Asking that the political right of civic employees and civil servants be guaranteed;

(19) Favouring legislation which will give all employees who have been employed for ten months at least two weeks holidays with full pay each year.

Manitoba Executive, Trades and Labour Congress

The Manitoba provincial executive of the Trades and Labour Congress of Canada, accompanied by representatives of the Winnipeg Trades and Labour Council and a number of representatives of local unions, waited on Premier Bracken and his cabinet on January 21, and laid before them the legislative program of organized labour. Among the requests made were the following:—

(1) Urging amendments to the Child Welfare Act;

(2) Advocating the enactment of a Trades Dispute Act;

(3) Recommending the enactment of an Eight-hour Day Act;

(4) Asking for legislation whereby there shall be one day's rest in seven;

(5) Pressing for amendments to the Minimum Wage Act;

(6) Urging the elimination of the Electrician's License Act;

(7) Recommending the abolition of the Amusement Tax;

(8) Advocating compulsory public liability to be carried by motorists;

(9) Asking for a Mining Act to provide safety measures;

(10) Recommending amendments to the Income Tax Act;

(11) Urging taxation and regulation of motor vehicles;

(12) Asking for adequate protection at railway crossings;

(13) Advocating old age pensions;

(14) Urging that appropriations be made to the Bureau of Labour for general safety work;

(15) Pressing for amendments to the Steam Boiler Act.

British Columbia Executive, Trades and Labour, Congress

The British Columbia Executive of the Trades and Labour Congress of Canada recently waited on Premier John Oliver of British Columbia and his cabinet, and placed before them the following legislative program:

(1) Amendments to the Workmen's Compensation Act to provide more generous treatment for injured workmen and their dependents;

(2) Revision of the Mothers' Pension Act to extend the scope of this statute to new classes of women and to increase the present pensions;

(3) Extension and enforcement of the eight-hour day principle to all industries in the province;

(4) Continued efforts by the province to secure the establishment of old-age pensions in Canada;

(5) Tightening up the Women's Minimum Wage Act to prevent evasion, and to make the Act include boys as well as girls;

(6) Elimination from the Factory Act of clauses allowing the employment of children in fish and fruit-packing and permitting children to work any hours in these businesses during salmon runs and fruit-picking seasons;

(7) Carrying of compulsory insurance by all automobile owners to cover damage to property or person;

(8) Enactment of legislation giving every British person, male and female, over 21 years of age and to all from whom a poll tax is now collected, the right to vote in civic elections;

(9) Regulations preventing any person voting in more than one polling division in any city or municipal election;

(10) Abolition of property qualifications for all elective offices in cities and municipalities, five years' residence and endorsement by 150 electors being sufficient qualification for office seekers;

(11) Legislation to provide better protection for the public from fire apparatus answering fire calls;

(12) Amending the Weekly Half-holiday Act, definitely setting 1.30 p.m. as the time when stores must close.

Premier Oliver promised that these representations would be carefully considered.

Quebec Executive, Trades and Labour Congress

The legislative programme of the Quebec executive of the Trades and Labour Congress of Canada was submitted to Premier Taschereau and members of his cabinet, on January 18, by a delegation composed of Messrs. G. R. Brunet, Montreal, O. Fleury, Quebec, L. Morin, Montreal, and Jos. Pelletier, Montreal, members of the provincial executive, together with members of the Montreal Trades and Labour Council and representatives of local unions. Accompanying the delegation

was a committee of women who were co-operating with the labour representatives in asking for women suffrage. Among the requests submitted to the Government were the following:

(1) Recommending amendments to the Workmen's Compensation Act;

(2) Urging the passing of legislation embodying the decisions of the International Labour Conference coming under the jurisdiction of the provincial legislature;

(3) Advocating the inclusion of fair wage schedules in governmental contracts or undertakings assisted through grants from the government;

(4) Recommending that the Minimum Wage Act be amended so as to include within its scope, female employees in stores, offices, etc., and that the powers of the board be extended so as to control the working hours of these employees;

(5) Asking for the abolition of private employment offices;

(6) Urging the passing of a Mothers' Allowance Act;

(7) Recommending that the works of Canadian authors be printed in Canada;

(8) Advocating certain amendments to the School Acts;

(9) Asking for greater protection of the right of association;

(10) Recommending measures pertaining to industrial hygiene;

(11) Advocating regulation and examination of moving picture operatives;

(12) Recommending an amendment to the Election Act so as to provide for advance polls;

(13) Urging the extension of the franchise to women in provincial elections.

Railway Brotherhoods in Quebec

Representatives of the Railway Brotherhoods in conjunction with the Quebec executive of the Trades and Labour Congress of Canada, waited on Premier Taschereau and members of his cabinet, on January 18, and laid before them a provincial programme of proposed labour legislation.

In addition to supporting the Quebec executive of the Trades and Labour Congress in its advocacy for the enactment of certain labour legislation, the representatives of the Railway Brotherhoods submitted the following request:

Urging upon the government the importance of prompt and definite action being taken by provincial and municipal authorities, with a view to the elimination of highway crossings with railway at rail level, and that, pending the placing of the highway over or under the railway, adequate protection be provided, either by warning signals or an effective stop law for motor and other vehicles.

Locomotive Engineers of Alberta

Mr. William Puller, chairman, Calgary, and Mr. P. M. Simpson, secretary, Medicine Hat, headed a delegation of Locomotive Engineers that waited on Premier Brownlee of Alberta, on January 19, and pressed for amendments to the Motor Vehicles Act.

Among the amendments sought were: (1) That the driver of a motor car must not go at a pace of more than fifteen miles an hour within fifty feet of a steam, electric or street railway grade crossing, unless during the last two hundred feet of his approach to such crossing he can see clearly for four hundred feet in each direction up and down the rails; (2) That the car must be brought to a complete stop when a railroad signal gives warning of an approaching train; (3) That the car must be stopped within fifty feet, but not less than ten feet from the tracks at any grade crossing marked by the authorities as dangerous.

Other requests made were: (1) that the provincial government bring in amending legislation to the Railway Act as regards stock running at large on highways at railway crossings at grade; (2) That the Alberta Act be made to conform with the Dominion Act in this respect.

The Committee received a very sympathetic hearing from the premier, who assured them that their suggestions would have the most careful consideration when the legislation for the coming session was being considered.

Legislative Committee of the Railway Brotherhoods

The legislative committee of the Railway Brotherhoods, composed of Messrs. L. L. Pelletier, Order of Railway Conductors, Byron Baker, Brotherhood of Locomotive Engineers, T. J. Coughlin, Brotherhood of Railroad Trainmen, and William L. Best, Brotherhood of Locomotive Firemen and Enginemen, on January 11, conferred with the Prime Minister, Right Hon. W. L. Mackenzie King, and members of his cabinet, and submitted to the government a memorandum of proposed legislation as follows:—

(1) Urging an amendment to the Canadian National Railway Act, whereby the "maintenance" of the former Canadian Government Railways would be brought under the jurisdiction of the Board of Railway Commissioners for Canada in the same manner and

to the same extent as "operation" and "equipment" of those railways;

(2) Advocating the amending of the Immigration Act and the Criminal Code, so as to repeal the "objectionable features" enacted in 1919, *re* deportation without trial by jury;

(3) Recommending further restrictions and supervision of Asiatic immigration;

(4) Urging an amendment to the British North America Act that will restrict the powers of the Senate to veto a bill passed by the House of Commons more than twice;

(5) Suggesting that careful consideration be given by the next Federal-Provincial Conference with regard to protection at highway crossings of railways at rail level and that funds placed at the disposal of the conference be utilized to eliminate highway crossings, wherever practicable;

(6) Advocating the re-introduction of an Old Age Pensions Bill at the coming session;

(7) Recommending that legislative action be taken with the least possible delay to insure the payment of compensation for accidents to employees of the Prince Edward Island Railway on similar scales and terms, at least equal, to that paid in the adjoining provinces;*

(8) Urging the amending of the Dominion Election Act in regard to advance polls for railway employees, sailors and commercial travellers.

At the conclusion of the conference the Prime Minister promised that the demands of the committee would be given careful consideration.

Railway Brotherhoods in Ontario

The legislative programme of the Railway Brotherhoods was submitted to Premier Howard Ferguson of Ontario and members of his cabinet, on January 19, by a delegation composed of Messrs. William L. Best, vice-president and national legislative representative, Brotherhood of Locomotive Firemen and Enginemen; H. B. Crawford, vice-chairman for Ontario, B. of L.F. & E.; J. S. Crawford, chairman, Ontario legislative board, Brotherhood of Locomotive Engineers; J. A. Nethery, chairman, Ontario legislative board, Order of Railway Conductors; T. J. Coughlin, Dominion legislative representative, Brotherhood of Railroad Trainmen; James Conley, chairman, Ontario sub-legislative board, Brotherhood of Railroad Trainmen, and J. T. L. McGuire, vice-chairman, Ontario sub-legislative board, B. of R.T.

The requests submitted were as follows:—

(1) Advocating the amending of the Assessment Act;

(2) Urging an amendment to the Public and High School Acts to provide for free school books to all pupils up to and including the fourth grade in high schools, or junior matriculation;

(3) Recommending that legislation be enacted whereby all industries otherwise within provincial jurisdiction be brought under the application of Federal Industrial Disputes Investigation Act;

(4) Asking the legislature to pass a resolution favouring an amendment to the British North America Act to provide that the Senate shall be elective;

(5) Urging upon the government the importance of prompt and definite action by provincial and municipal authorities for the elimination of highway crossings with railways at rail level and pending the placing of such highways over or under the railway, adequate protection be provided, either by warning signals or an effective stop law for motor and other vehicles;

(6) Recommending a Federal-Provincial conference to eliminate duplication of taxation on incomes.

Alberta Civil Service Association

The legislative programme of the Civil Service Association of Alberta was presented to the Alberta Government on December 31, by a delegation composed of past-president Dodds, vice-president McFadden, general secretary Sullivan, P. N. Johnson, C. B. Cox, A. A. Menzies, D. C. McEachern, T. Price, William MacOwan, A. L. Miller, G. E. Blais and R. W. Ellis.

The programme as submitted was as follows:

(1) Asking for the establishment of a committee of standardization, to be composed of members of the government and Association;

(2) Requesting that all appointments, except that of deputy ministers, be by competitive examination;

(3) Urging the government to consider the proposed new Civil Service Bill at the coming session;

(4) Recommending that each civil servant be given, annually, a copy of his efficiency rating and that salary increases be based on this rating;

(5) Advocating that salary adjustments be taken up immediately they are justly required;

(6) Urging the recognition of length of service in conjunction with salary increases;

*The provisions of the Railway Employees' Compensation Act of Prince Edward Island were outlined in the LABOUR GAZETTE, June, 1926, page 546. This Act limits the rate of compensation for injuries to 55 per cent of diminution of earning capacity in cases of partial disability, etc.

(7) Requesting some amendment to the Superannuation Act whereby a larger minimum would be paid than the present rate of $20 per month.

Premier Brownlee promised consideration of the various matters referred to, and to communicate his decision to the Association at an early date.

District 18, United Mine Workers of America

A delegation from District 18, of the United Mine Workers of America, headed by Robert Livett, district president, and A. J. Morrison, secretary, recently waited on the provincial government of Alberta and submitted certain amendments to the Mines Act. The request of the miners, which had the endorsation of the Labour members of the legislature, were as follows:

(1) Recommending the appointment of a deputy district inspector of mines;

(2) Advocating that the ventilation of mines be measured every twenty-four hours;

(3) Urging that only certificated miners be allowed to work at face-heads of mines and in the more hazardous places;

(4) Asking for changes in the sections of the Act dealing with the appointment and privileges of check-weighmen;

(5) Recommending better protection against non-payment of wages;

(6) Requesting the abolition of provisional certificates to certain officials;

(7) Asking the right of inspection of some of the books and records of the mining companies in which the miners' interests are directly concerned.

British Columbia Civic Employees

On January 25, 1927, a delegation from the Vancouver, New Westminster and District Trades and Labour Council headed by the president, James Thompson, waited on the Vancouver City Council and submitted requests for regulations for the protection of workers on sewers and other excavations. The Council promised to make a complete investigation and to take such precautions as civic officials recommended.

Unemployment Insurance in Great Britain

Figures have recently been given to show some of the results of the unemployment insurance system in Great Britain over a number of years.

Number of Insured.—The total number of insured workers in Great Britain and Northern Ireland as estimated in July 1926 was 12,041,000, an increase of 149,000 over the figure for 1925, and of 500,000 over that for 1923.

When the extended insurance scheme was first introduced in November, 1920, the number of insured workers was estimated at over 12,000,000, but this included those in the whole of Ireland. When the Irish Free State instituted a separate scheme in April, 1922, the number of insured persons in Great Britain and Northern Ireland was about 11,750,000. By July, 1923, it had dropped to 11,500,000, but since then has risen steadily again.

Volume of Unemployment and Benefit.—In reply to a question in the House of Commons, the Minister of Labour recently gave the total number of days of unemployment for which benefit was paid. The following figures exclude days for which benefit was not paid owing to waiting periods, disqualification of claims, etc.

Year	Days
1921	453,300,000
1922	345,100,000
1923	287,700,000
1924	258,500,000
1925	273,700,000

The Minister also gave the total amount of benefit paid in the eight years from the Armistice to November 13, 1926, as £275,000,000, *plus* £62,500,000 in out-of-work donation.

The drain on the Unemployment Fund involved by the continued severity of unemployment and these huge payments of benefit is indicated by the debt to the Treasury at the end of each year:

Year	£
1921	7,600,000
1922	15,890,000
1923	12,790,000
1924	5,410,000
1925	7,595,000

On November 6, 1926, however, the debt stood at £19,300,000, which reflects the increased unemployment following on the coal dispute. The Minister of Labour estimated the increase of debt from May to November, 1926, at about £7,300,000.

NOTES ON LABOUR UNION ACTIVITIES

Centenary of Trade Unions in Canada

WHILE the Dominion of Canada observes this year the diamond jubilee of Confederation, for organized labour the year 1927 marks the one hundredth anniversary of the formation of the first labour union in British North America. Departmental records show the first Canadian trade union to have been organized in the city of Quebec in 1827, being composed of printers. This pioneer union was followed in 1832 by the organization of another body of printers, which was formed in York (now Toronto) under the name of the York Typographical Society. Although both of these organizations lapsed for a number of years, they have had the longest continuous existence as trade unions in Canada, both eventually becoming identified with the International Typographical Union, under charter from which body they are now operating.

United Mine Workers of America

The thirtieth convention of the United Mine Workers of America was held in Indianapolis, on January 25-February 2, 1927, with approximately 1,500 delegates present. Following the report of the committee on rules and order of business, the report of the credential committee, and the announcing of other convention committees, President J. L. Lewis delivered his address, reviewing at considerable length the activities of the union during the three-year period since the last convention. He gave an account of the efforts put forth to have a new agreement signed covering the membership in districts 1, 7 and 9, anthracite jurisdiction, to replace the agreement which expired on August 31, 1925. When no settlement could be arrived at between the coal operators and the miners, a strike was called on September 1, 1925. After the strike had been carried on for some time, Hon. Gifford Pinchot, Governor of Pennsylvania, intervened and eventually a conference was brought about which resulted in an agreement being signed covering a period of five years. The men returned to the mines on February 18, 1926, having been on strike for 170 days. President Lewis referred to the high honour which had been conferred upon Mr. William Green, former secretary-treasurer of the U.M.W.A., in his elevation to the presidency of the American Federation of Labour. To succeed Mr. Green, Mr. Thomas Kennedy, of Hazleton, Pa., had been appointed to the position of secretary-treasurer. The president drew attention to the great many suits which had been filed against the organization, asking for damages in excess of fifteen million dollars plus attorneys' fees, but stated that he was pleased to report that no judgments for damages were outstanding at the present time. Mention was also made of the expiring wage agreement in the bituminous districts, and the president intimated that the wage scale committee would present, later on in the convention, its recommendations upon wage matters and policy. This committee was composed of the international officers and one representative from each district, Robert Livett, acting president of district 18, and J. W. McLeod, president of district 26, being the Canadian representatives. Mr. Lewis was of the opinion that the new wage scale, together with the formation of sound future policies, would be the most important problems with which the convention had to deal. The president referred to the question of freight rates on coal, and in this connection cited the opinion of commissioners of the Interstate Commerce Commission in the lake cargo case (Docket No. 15007), which meant, "that these rates were established and were now maintained without regard to the law or the facts, but solely in order to confer undue advantages and special privileges upon the coal operators of Kentucky, Tennessee, Virginia and West Virginia." In closing his address, President Lewis stated that "the United Mine Workers organization does not seek any favours or special privileges for its members or for the coal companies which have contractual relations with it. It does not seek to impose burdens upon the miners or operators of any other district. This organization does, however, demand justice and equity and is determined to use every legitimate resource within its power to secure it."

Vice-president Philip Murray, reporting to the convention, also reviewed the happenings in districts 1, 7 and 9, leading up to the strike commencing on September 1, 1925, which, by reason of its long duration and the fact that it lasted for an entire winter, created a very serious condition throughout the anthracite-consuming territory—a shortage of fuel bordering upon famine, bringing with it sickness and much discomfort.

Mr. Murray paid a tribute to the conduct of the striking miners by stating "that not a single arrest for disorder of any kind took place during the strike." The vice-president informed the delegates that the work of organizing the non-union miners had been hampered during the past two years, due to wage contract repudiations which had taken place in some of the union districts. This circum-

stance had necessitated the placement of a number of field men in districts where coal companies had been attempting to evade the fulfilment of their wage agreements and had thereby circumvented the time, effort and money of the union that would ordinarily have been devoted to organizing work in the non-union fields.

Mr. Murray criticized the United States Bureau of Mines for not publishing the reports of its investigations of the great mine disasters which from time to time cause terrible loss of life and property, and by reason of which the mining industry has been deprived of all the knowledge which it might have gained of the fundamental causes which led to these disasters. The vice-president was of the opinion that the primary functions of the Bureau of Mines should be promoting the prevention of mine accidents throughout the United States and to that end submitted the following recommendations: (1) The conduct by the Bureau of Mines of an educational campaign for the promotion of standard methods of accident prevention in all states: (2) the active promotion of uniformity of mine safety laws and safety inspection in all states; (3) prompt publication by the Bureau of Mines of its reports of mine disasters, so that this knowledge will be available for the entire industry.

Secretary-treasurer Kennedy quoted figures to show that during the period from the last convention to November 30, 1926, there was expended for relief in the bituminous coal fields a total of $3,616,133.26, while during the anthracite strike there was approximately $1,100,000 paid out in relief. Another item of expenditure was the erection in the Court House Square, Scranton, Pa., of a monument to John Mitchell, former president of the United Mine Workers of America. The expenses incident to the erection and dedication of this memorial was $60,808.65. In speaking of the general finances of the union, the secretary-treasurer gave the total resources and income for the past three years as $8,375,853.74, and expenditures of $7,760,918.90, leaving a balance in the treasury on December 1, 1926, of $610,748.58. In order to rehabilitate the finances and provide for any emergencies that might occur, the General Executive Board placed an assessment of $1 per month on each member for the months of December, 1926, and January, 1927.

The Committee on Old Age Pensions presented their report to the convention showing that five States had enacted old age pension laws, viz., Montana, Nevada, Pennsylvania, Wisconsin and Kentucky. In several other States bills have been introduced, but these have been either vetoed by the Governor or passed by only one of the branches of the assembly. The committee further reported that they had been successful in making many friends for the cause of old age pensions, the latest being a combination of twenty fraternal and labour organizations, who have pledged their aid and support toward the establishment of such pensions.

Mr. William Green, president of the American Federation of Labour and former secretary-treasurer of the United Mine Workers of America, addressed the convention. He reiterated the determination of the Federation to demand that wages increase in proportion to the productivity and efficiency of labour and to push its program for a reasonable constructive reduction in the hours of labour. President Green stated that "the theory of prosperity based upon low wages was unsound and uneconomic." He denounced the action of the coal operators who had broken away from the Jacksonville agreement and exhorted the miners to support and follow their international officers and said "the union alone could rescue the industry from ruthless internal competition." Mr. Green concluded his address by serving notice that Communists would be driven out of the ranks of organized labour.

Previous to adjournment, the convention empowered a central competitive field scale committee to negotiate a new wage contract for the bituminous coal miners. The contract must be submitted to a referendum before it becomes operative, and districts outside the central competitive field must wait until the central field makes a contract before they can reach an agreement. The committee will meet the coal operators of Illinois, Indiana, Ohio and Western Pennsylvania at a later date.

Some of the amendments to the constitution, as adopted by the convention, were as follows: (1) Increasing the president's salary from $8,000 to $12,000; vice-president and secretary-treasurer from $7,000 to $9,000; (2) Debarring members of the Communist Party from joining the U.M.W. of A., and empowering any local, district or national organization, upon conviction, to expel any communist, and also permanently debarring members of the party from holding office; (3) Providing for the levying of assessments by the administration without a referendum; (4) That those holding office in the U.M.W. of A., must be citizens of the United States or Canada or must have applied for citizenship; (5) That delegates to the convention of the American Federation of Labour cannot hold office in the union; (6) That the

president, vice-president and secretary-treasurer must present a joint report at future conventions.

Among the resolutions adopted were: (1) Memorializing both houses of Congress asking for an investigation of the Interstate Commerce Commission's method of fixing freight rates; (2) Asking for a new trial for Sacco and Vanzetti; (3) Expressing confidence in the officers of the U.M.W. of A.; (4) Instructing the executive board to do everything in its power, consistent with the union's resources, to bring about the complete organization of the coal mining industry; (5) Favouring the principles of nationalization of mines and railroads under democratic management; (6) Opposing the leasing of government coal lands for development while productive capacity of the mines now in existence so far exceeds demand.

Death of Grand Officer of Brotherhood of Locomotive Engineers

Ashmore W. Kennedy, assistant grand chief engineer of the Brotherhood of Locomotive Engineers and head of that organization in Canada, died on February 3, after a brief illness at Venice, Florida, where he had gone to attend a meeting of the brotherhood officials and subsequently to remain for the remainder of the winter season.

Mr. Kennedy was born at Halifax in 1852, and commenced railroading at the age of 16 years, when he started as a brakeman on the old Nova Scotia Railroad, which subsequently became known as the Intercolonial Railway. Three years later he was in charge of a locomotive. He remained with the Intercolonial until 1875, and, after four years with construction companies, he went to Winnipeg, where, in 1881, he entered the service of the Canadian Pacific Railway as a locomotive engineer. From chief of division No. 76 of the B. of L.E., which he helped to organize in 1881, he was appointed in 1891 general chairman of the B. of L.E. Committee of Adjustment on the Canadian Pacific system. In 1908, at the Harrisburg convention of the brotherhood, he was elected to the office of assistant grand chief engineer, which post he held until the time of his death.

Mr. Kennedy ranked as the senior engineer on the C.P.R., but had been on continued leave of absence from that company since 1901 in order to attend to his brotherhood duties.

Mr. R. H. Cobb, of Toronto, chairman of the B. of L.E. general adjustment committee for the Canadian Pacific Railway, for the past sixteen years, has been selected to succeed the late Mr. Kennedy as assistant grand chief of the brotherhood.

International Seamen's Union of America

The thirtieth annual convention of the International Seamen's Union of America was held at Washington, D.C., commencing on January 10, 1927.

President Andrew Furuseth, in his address informed the delegates that there was more real effort put forth and better prospects for the future than at any time since 1921. He stated that heretofore "lack of strength of one kind or another made it impossible for the organization to function as it should, and compelled it to stand by looking at wrongs which could not be redressed and at opportunities which could not be used." The president reported at length on his observations in Europe, dealing in detail with the conditions of seamen in the various maritime countries. He also dealt with the various bills, which had been introduced in Congress affecting in any way, the welfare of the organization.

Secretary-Treasurer Orlander's report contained an itemized statement of receipts and disbursements for the past year and showed the international union to be in a sound financial condition. Secretary Orlander also submitted a full account of the executive board's transactions, as well as a complete summary of his activities as secretary-treasurer of the union. In speaking of "The right of association" the secretary-treasurer asserted that "the discrimination by law and the action of the Government authorities against one class, the seamen, in favour of another class, the ship owners, was certainly not in accord with basic American principles, which call for equality." Secretary Orlander was opposed to the theory of amalgamation, when carried to the extent of putting all members in a single gigantic local union in each one of the three districts. He stated that this would result in an organization so cumbersome and unwieldy that action of any kind would be extremely difficult. In closing his report secretary Orlander said "again, as on past occasions, let me remind you that the true source of real strength is to be found in the faith and confidence in each other, which we develop within ourselves, and not in any cowardly dread of those whom we conceive to be our enemies."

The convention went on record as disapproving the theory of amalgamation and suggested that the executive officers visit the various districts under the jurisdiction of the Union and present oral and written arguments against amalgamation. The convention unanimously approved of the reply of president Furuseth to a questionnaire recently issued by the Shipping Board, in which he declared

against Government ownership of the merchant marine and favouring the development of the merchant marine under private ownership, construction and operation, properly regulated by law. The president was further commended for his suggestion "that the Government should be prepared to protect American ships against conspiracies—or so-called conferences—through which foreign shipping interests may try to drive American vessels out of certain trades."

The convention decided to affiliate with the Marine Section of the National Safety Council.

Among the resolutions adopted by the convention, were the following: (1) Directing the Legislative Committee to work for the enactment of a Federal Seamen's Compensation Law, provided that such a law shall not modify any existing remedy, including the choice between compensation and the right to sue for damages after the injury has taken place; (2) Protesting against the inclusion of seamen under the provisions of the Compensation Act as amended by the Judiciary Committee of the House of Representatives, and that the legislative committee be instructed to do everything possible to exempt the organization from the provisions of the bill. (3) Instructing the secretary-treasurer to send to the Labour News Service of the American Federation of Labour, all labour papers and League for Industrial Democracy, a statement warning them against the propaganda as contained in the brief of the "League for Industrial Democracy" concerning the American Merchant Marine; (4) Instructing Secretary Orlander and the executive board to gather information as is attainable pertaining to injuries to seamen and the rights and methods of collection of damages, under the Employers' Liability Law, and to distribute such information to all district unions and local branches; (5) Directing President Furuseth to keep a careful watch to prevent the passage of such proposals as H. R. 9399 and H. R. 10009, introduced by Representative Free of California and aiming to destroy certain important sections of the La Follette Seamen's Act. (6) Deciding to purchase a share of the stock of the Union Labour Life Insurance Company and call the attention of the district unions to the subject.

The chief officers elected were; President, Andrew Furuseth, A.F. of L. Building, Washington, D.C.; First Vice-president, Patrick Flynn, 58 Commercial Street, San Francisco, Cal.; Secretary-treasurer, Victor A. Orlander, 359 North Wells Street, Chicago, Ill. The executive board will select the place for the next convention, which will be held on the second Monday in January, 1928.

International Union of Mine, Mill and Smelter Workers

A reorganization of the International Union of Mine, Mill and Smelter Workers was held in St. Paul, Minn., on January 17-25, 1927, with representatives present from various sections of the country within the jurisdiction of the union. The first few days of the convention were given over to preliminary work, the important matter of revising the constitution having been turned over to a special committee. This committee sought to work out a code of by-laws that would eliminate the source of past troubles and thus allow the membership to prepare for constructive work. The convention adopted the revised constitution and by-laws as submitted by the special committee and will be submitted to a referendum vote of the membership. In order to allow of a complete reorganization the President and other international officers tendered their resignations which were accepted. It was largely through the mediation of Mr. Paul J. Smith, representative of the American Federation of Labour, that the reorganization plan was agreed upon. Headquarters of the union are maintained in Denver, Col., and about fifty local unions remain affiliates of the parent body.

The International Union of Mine, Mill and Smelter Workers was organized in 1893, but in 1916 adopted its present title, the former name being considered unsuitable owing to the union having extended its jurisdiction beyond the western states and also into Canada.

The election of officers resulted as follows: President, James B. Rankin, Butte, Mont.; Vice-President, Homer Whitmore, Great Falls, Mont.; Secretary-Treasurer, Edward E. Sweeney, Butte, Mont. The board members are: H. E. Gallager, Great Falls, Mont.; A. A. Robertson, Fort Smith, Ark.; Theo. Murphy, Anaconda, Mont.; John Gilbert, Butte, Mont. These members, together with the international officers, constitute the executive board of the organization.

Report was recently made that the State Senate of Texas had passed an act requiring the prison label to be placed on all products of the State penitentiary at Huntsville.

WORLD MIGRATION AND LABOUR

Publication by International Federation of Trade Unions

THE International Federation of Trade Unions has published a valuable report on "World Migration and Labour," supplemented by a report of the World Migration Congress convened by the I.F.T.U. and the Labour and Socialist International at London in June, 1926. The main report was issued in conformity with a resolution adopted at the International Migration Conference held at Prague in 1924, requesting the Federation to collect all available material, for presentation to a representative International Labour congress, so as to enable labour to define its relation to the migration problem in its international aspect.

The volume contains a survey of the general position in regard to world migration, stress being laid on the origin of current problems. On the other hand such subjects as naturalization, immigrant housing, and the work of institutions protecting emigrants, as well as information in regard to smaller countries, are omitted for reasons of economy; but it is hoped that a supplementary volume will be issued later. The report is based to a considerable extent on information supplied by the International Labour Organization (especially in regard to social insurance), and by affiliated trade union centres, international secretaries, the American Federation of Labour, and the Australian trade union centres.

The report is divided into five parts, dealing respectively with the history and statistics of migration, its regulation; the position of the immigrant with respect to social insurance; the economic aspects of migration; and migration in relation to labour. It concludes with a section containing proposals for an international labour migration policy.

The bearing of migration on trade unions arises out of the danger that the influx of a considerable number of immigrants will lower the standard of living and social condition of the workers.

Already at the Berne Congress of 1919, the I.F.T.U. admitted that nations might restrict migration under three conditions: first, when a temporary economic crisis warrants it; second, when restriction is necessary for hygienic reasons; and third, when the immigrants in question are completely illiterate. The questions which labour has to consider are whether the principle of restriction should be extended from these three cases, and be made to apply to the immigration of workers whose low standards of living make their exclusion necessary for the maintenance of the standards of living of nationals; and also whether the question of racial non-assimilability ought to be allowed to weigh down the scales. With regard to the first question, the report claims that there will be a general feeling in favour of the recognition of this necessity, although it will be admitted that there may from time to time be danger of too hasty decision. In regard to the problem of the immigration of "unassimilable" races the report says that "the admission of large numbers of unassimilated immigrants is undoubtedly prejudical to the unity of labour, which will therefore naturally be inclined to favour a policy of restriction in such cases; but it would be better if such decision could, whenever possible, be based upon the economic rather than upon the racial objections. International labour must consistently deprecate the emphasizing of racial differences, as being opposed to the spirit of international solidarity."

The principal constructive proposal contained in the report is the establishment of an international migration body which could make impartial decisions in the matter of restriction, and arbitrate between the rival nations concerned. "One of the advantages of the establishment of an international migration body is that such policy could make decisions in favour of restriction unbiased, and could arbitrate between the rival nations concerned; it could initiate enquiries, and on the basis of the information obtained, judge whether restriction or complete exclusion is necessary or expedient. All such activities could be carried on with much less likelihood of wounding the susceptibilities of the nations concerned than if the excluded nation negotiated directly with the excluding nation.

"Migration must be regulated," the report concludes; "this regulation *may* cover the determination of the volume of migration; it *must* cover the provision of information, the recruiting of emigrants, the conclusion of international agreements, the protection of the emigrant en route, the placing of him in the new country, and the supervision of his conditions there, with a view to securing his equality of treatment in respect of wages, working conditions, and enjoyment of the benefits of social insurance with the nationals of the country of immigration. All the abovementioned functions can best be accomplished by the creation of special national and international bodies for the purpose, on which Labour must be strongly represented, as only so can the interests of both immigrants and

national workers be effectually safeguarded; otherwise, employers will exploit both native and immigrant workers by playing off one against the other."

A warning is given against the danger of considering migration an infallible remedy against unemployment and over-population. "Labour is well aware that both are due to deep-lying economic causes, and that migration can be of use to a very limited extent only, or for a limited period of time. As to the true remedy for over-population, labour has not yet taken up an official standpoint: but no doubt it will eventually decide for international justice, and discountance any national policy which would tend either towards the steady depression of the standards of one nation by another, or towards war."

The report points out certain direct benefits resulting to the workers from migration. "Within certain carefully-drawn limits, migration should certainly be encouraged by international labour. It may offer opportunities for workers to improve their position, and give their children a better chance in the world: and it may thus promote the strengthening of the position of Labour as a whole. It is obviously good to take a child from a crowded and unhealthy slum, and transplant it into a new country with plenty of fresh air and elbowroom. But even under the best conditions it is a drastic step, bringing in its train much inescapable hardship; under the worst it may mean that a worker goes from one country where he is half-starved to another where he is no better off and, in addition, is unwelcome and a prejudicial element to the native labour movement. A worker comes under a heavy handicap, too, when he goes from a country with advanced social legislation to another where it is less advanced. The general feeling apart from specific circumstances, is that emigration should not be pressed upon anyone who has not a natural inclination for it: everything should be done to enable such a person to remain in his own country."

Canadian Labour and Immigration

The recent history of the actions of Canadian organizations in regard to immigration is outlined in the section of the report describing the migration policy of labour, as follows:—

The question has received much attention at all the recent conventions of the Trades and Labour Congress. At the Winnipeg convention of 1921, absolute prohibition of all European immigrants except agriculturists was demanded for two years; also total exclusion of all Oriental agriculturists, and legislation to stop the distribution of literature tempting industrial workers into Canada, and the deportation of industrial immigrants who had got into the country under the exempt classes regulations and then changed their occupation. At the Montreal convention of 1922, the first demand was dropped, but the total exclusion of Orientals demanded. A Dominion Advisory Council of Immigration was demanded, and the maintenance of the Immigration Department under a separate Minister, the exclusion of scab labour, and the preparation of settlement and colonization schemes for immigrants already in Canada. At the Vancouver convention of 1923, the demand for the total exclusion of Orientals was not pressed, because it was believed that Japanese immigrants could be kept out in other ways. The trade unions approved the bill respecting Chinese Immigration then before parliament. The programme for immigration included the closest supervision and direct government control of the immigration activities of provincial authorities. At the London convention of 1924, the policy on Oriental immigration was declared to be unchanged. The executive council was urged to continue its efforts to give effect to the policies adopted by the convention. In 1924, a memorandum was also drawn up for presentation to the British Commonwealth Labour Conference (postponed until 1925) and later submitted to the Congress of the British T.U.C. This memorandum stresses the need for the co-operation of the British authorities to enable medical and other examinations of immigrants to take place, as far as possible at the port of embarkation.

"Industrial Democracy" since the Armistice

An account of recent developments in the organization of industry is given by Mr. W. Jett Lauck, formerly secretary of the United States National War Labour Board, in a new volume entitled "Political and Industrial Democracy, 1776-1926." The book opens with a brief review of the period following the "industrial revolution," which began in Great Britain at about the same date as the revolution which established a political democracy on the American continent. The United States remained predominantly an agricultural country until long after the civil war, and it was not until the last quarter of the 19th century that American mining and manufacturing industries commenced their phenomenal growth. Professor Lauck describes the development of large scale production during this period, culminating in the creation of "artificial legal personages," known as industrial corporations, in which the control of basic industries gradually became organized on a national or international scale. When the great war began the United

States and other countries were thus threatened with an "industrial autocracy" Mr. Lauck describes the situation at that time as follows:—

"All personal relations between employers and employees having disappeared through the growth of immense industrial units, wage-earners soon realized that their hope of protection lay in meeting organization with organization, or economic bargaining strength with economic bargaining power. The individual wage-earner was helpless. Trade and industrial unions of workers were, therefore, formed on a national basis. National associations of employers were also organized. Economic strength in bargaining, rather than considerations of humanity and economic justice, became the determining force in fixing wages and conditions of employment of industrial workers."

At this stage the United States became involved in the European war, and the conflict between capital and labour ceased for a time, the workers and employers in war industries agreeing on principles and policies to govern their mutual relations. The outcome of this agreement was the National War Labour Board, established by President Wilson in April, 1918, its members representing capital, labour and the public. This spirit of co-operation during the war led to remarkable achievements in the field of industrial production.

After the armistice many attempts were made to carry over the co-operative spirit into peace times. Among their attempts Professor Lauck mentions the Canadian Royal Commission on Industrial Relations, followed by a "National Industrial Conference" in 1919, in form of a "Parliament of Industry," which, however, he declares, failed to bring any immediate constructive benefits. A somewhat similar industrial conference was held in 1919 in Great Britain and in the United States two National Industrial Conferences were held in the same year. The guiding thought of these conferences was that the right relationship between employer and employee can best be promoted by deliberate effort and organization. This thought also lies at the basis of "industrial democracy," the new conception of industry as a social institution. Unfortunately, Mr. Lauck observes, the consideration of constructive proposals for a new era of peace and democracy was too long delayed. The armistice was followed by a period of rising prices, industrial stagnation and unemployment, these causes leading to widespread industrial unrest.

In the meantime many individual efforts were being made within industry itself, some arising from commendable and some from unworthy motives, to further the movement towards industrial justice and democracy. A large section of Professor Lauck's book is devoted to descriptions of these various "plans." Five plans, he says, stand out above all others as indicating a sincerity of purpose and as offering a basis for future constructive action. Four of these represent an evolutionary growth during the past fifteen years. With only one exception they were inaugurated in pre-war years, when the "American Plan" and other anti-union plans were unknown, and their creators were men of real vision and forward-looking action. These plans are those of Wm. S. Filene Sons of Boston, the Dutchess Bleacheries of Wappingers Falls, New York, the Dennison Manufacturing Company, of Massachusetts, the A. Nash Company, of Cincinnati, and the Mitten, or Philadelphia Rapid Transit Company plan. Two other plans also indicate capacity for real democratic growth. One is the so-called "B. & O. Plan" which was first adopted by the Baltimore and Ohio shop men and which is now in effect also in the shops of the Canadian National Railways, and the other plan mentioned is that of the Southern Railway. These plans, in Mr. Lauck's opinion, are based on sound principles of collective bargaining—or union-management co-operation—and of mutual participation in co-operative activities, but they are of such recent origin that they are still in the experimental stage and Professor Lauck thinks that it remains to be seen whether they can be expanded to include the other important fundamentals of industrial democracy.

Mr. Lauck draws five general conclusions from his inquiries into the various types of employees' representation:—

1. A definite independent organization of employees is an essential preliminary to co-operation and industrial democracy. The standard labour organization fully meets this need, and all systems of co-operation or industrial democracy should be based on, or co-ordinated with, labour organizations.

2. The best method of extending participation in revenue gains to employees and management consists in the allowance of a certain proportion of gross revenues, or, in other words, it is best to start with the established ratio of labour and management costs to total gross receipts and guarantee this ratio. This will enable both labour and management to participate in lower costs of operation and in the increased volume of business resulting from their own efforts or from the growth in population and the demand for commodities and services.

3. The only practical hope of a complete realization of industrial democracy or the

ownership and control of industrial undertakings by employees, lies in the *collective* purchase of common stock. Individual stock purchase plans have been a failure. The individual employee does not retain his stock, and the common stock of industrial corporations purchased by employees does not remain in the hands of employees actually at work.

4. The emancipation of industry from dependence on banking groups for capital and credit would enable surplus earnings to be reinvested in industry, and prevent such earnings from becoming the basis for new securities which would absorb future earnings.

5. Industrial workers constitute a large part of the total number of consumers of industrial products, and their interests as consumers, as well as the great body of other classes of consumers of industrial commodities, must be considered in plans for the achievement of democracy in industry.

REPORT OF DEPARTMENT OF HEALTH OF CANADA FOR 1925-26

THE report of the Department of Health of the Dominion for the last fiscal year divides the activities of the Department under the following heads:—Quarantine service (including leper stations); immigration medical service; marine hospitals service; venereal disease control; narcotic drugs; proprietary or patent medicines; child welfare division; food and drugs division; laboratory of hygiene; Public Works Health Act; hospitalization and sanitation; pollution of the inland waters of Canada.

Marine Hospitals Service.—This service is operated in conformity with the provisions of the Canada Shipping Act (sick and distressed mariners). During the year the Department operated two marine hospitals, namely, at Sydney and Lunenburg in the Province of Nova Scotia. At the larger ports contracts were made with the local hospitals for the treatment of sick sailors at fixed per diem rates. At ports of lesser importance the department operated emergency hospitals, and at smaller outports satisfactory arrangements were made for their care and treatment through the agency of the collectors of customs.

The total number of sick and distressed mariners treated during the fiscal year 1925-26 was 3,782, as compared with 3,649 for the year 1924-25. This, however, does not represent the actual number of sick mariners attended to during the year. The total number of days of hospital treatment during the period under review was 36,292, as compared with 36,185 in the previous year.

Division of Child Welfare.—The Department maintains contact with public and private agencies throughout Canada for promoting child welfare, and keeps up correspondence with public health authorities in other countries. As the result of a maternal mortality inquiry during the year, it became increasingly evident that help should be provided in some way for the over-burdened mother in the home, and efforts to this end were carried on with some success. An outline for the organization of a home nursing service, prepared by the Department by request, was favourably received. Other activities of this section were in connection with young persons in penitentiaries and immigrant child welfare.

Public Works Health Act.—This Act (Revised Statutes of Canada, 1906, chapter 135), enables the federal government to make regulations for the preservation of health and mitigation of disease amongst persons employed in the construction of public works. Such works include, in addition to every public work of Canada, every railway, canal, bridge, telegraph and other work within the legislative authority of the Parliament of Canada. The regulations are (*a*) as to the extent and character of the accommodation to be afforded by the houses, tents or other quarters occupied by the employees on the work; (*b*) for the inspection of such houses, tents, or other quarters, and the cleansing, purifying and disinfecting thereof where necessary; (*c*) as to the number of qualified medical men to be employed on the works; (*d*) for the provisions of hospitals on the works and as to the number, location and character of such hospitals; (*e*) for the isolation and care of persons suffering from contagious or infectious diseases, etc.

The chief work carried on by the Dominion Government during the year was at the Welland Canal. The Canal is divided into a number of sections, viz., 1 to 8. Work was practically completed on sections 1 and 2 at the time of inspection, only about forty men being employed at Porters' camp, which is conducted by the contracting firm of Porter Brothers. This camp was found to be in good condition, the only defects found being due to lack of proper fly screens in dining room and latrines. At lock No. 3, at a point close to the intersection of the present and

new canal, two old buildings which were occupied by about forty men were condemned as totally unfit for habitation. Both houses were in a complete state of disrepair and overrun with rats. Unfortunately it was found that the Public Works Health Act did not give authority for closing these houses and it became necessary at a subsequent date to draw up a number of amendments to the Act to permit of the closure of such houses.

The Health Board which was created during the summer of 1924 has proved to be of benefit. A sanitary squad was organized under the direction of this Board which maintained the sanitary arrangements of the various camps in good order. The contractors grumbled a little at being obliged to carry out the orders of this squad and pay the small amounts occasioned by their services. Surveillance of the drinking water and inoculation of the employees at Port Colborne was satisfactorily carried out during the summer.

A report was received from the Director of the Medical Services of the Rouyn Railway, under construction, indicating that the sanitary arrangements and medical services were being maintained, with a few exceptions, in a satisfactory manner. An inspection of this work, is to be undertaken at the earliest opportunity.

Industrial mining and consulting engineers in various parts of the country have consulted the division upon problems incidental to the sanitation advisable for industrial mining districts, which, it would appear from such inquiries, is now demanding very serious consideration from those interested in such undertakings.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Campaign for Safer Elevators

THE Province of Quebec Safety League, at a meeting held at Montreal early in January, considered two recent deaths from elevator accidents in the city. League officers decided on an immediate campaign for the strict enforcement of the Quebec Industrial Establishments Act of the Province of Quebec, which, they found, is adequate in every way to protect life. Special mention was made of the following regulations respecting Industrial Establishments, and on these the campaign for enforcement will be based.

HOISTS

No. 23. At each story to which the hoist shall pass, there shall be provided substantial trap-doors disposed so that they shall open and shut automatically every time that the car shall pass up and down.

No. 24. Elevators and hoists shall be provided with safety catches, destined to hold the car in the event of the breaking of the cable.

No. 25. Employers will see that the different parts of their hoists or elevators receive a periodical inspection by the engineer of the establishment.

No. 26. In cities where a municipal inspection service exists, the employer, when requested by the inspector of industrial establishments, shall furnish a certificate of inspection of his hoist or elevator.

No. 27. The working of any hoist or elevator may be stopped by the inspector, if the necessary conditions of safety required are not observed.

Benefits for Montreal Harbour Commission Employees

The LABOUR GAZETTE for May, 1926, page 461, noted that the Montreal Harbour Commission had opened a hospital for the benefit of their employees and of seamen visiting the port. The president of the Commission, in a review of its activities during 1926 stated that the commissioners carried out during the year two projects devised for the advantage of their staff and employees. The first was the opening of an emergency hospital and rest units attached thereto, with full medical and hospital service and equipment. This important service was utilized constantly during the year, a total of 2,795 treatments having been afforded the employees since February. The commissioners considered this service far from complete, and promised that it would be enlarged as the occasion required. In regard to the second project the commissioners were gratified by the response made by the staff and employees to the scheme of group insurance which they brought into operation early in the year. About 1,000 men availed themselves of the opportunity for protection offered them, which number, the commissioners were informed, was a larger percentage of the total number of those eligible for insurance in this manner than it is customary to secure in other groups.

Value of "First Aid"

Mr. J. G. Sutherland, superintendent of the Calgary division of the Canadian Pacific Railway, in presenting certificates in First Aid to nine of the company's employees at Calgary recently, said that the men who made such studies were rendering a real service to the travelling public as well as to the railway. In illustration, he described an accident which happened at the Alyth shops a month ago. Edwin Kitson, in endeavouring to coal a locomotive, became buried under tons of coal which fell on him with terrific force. First aid rendered by D. Beath of the round house restored breathing when the man was practically given up as dead. He had applied what he had learned in the first aid course. Kitson after several weeks in the General hospital, Calgary, is able to be about again.

Rock Dusting in Mine Pits in Alberta

According to press reports, rock-dusting is to be introduced into bituminous coal mines in Alberta, and regulations governing its use are now being prepared by the provincial government mines branch. The new method will be applicable to the mines in the Nordegg, Canmore and Crow's Nest fields, but will not be adopted in any of the lignite fields, since the coal dust in the latter is not of the explosive kind. Spreading rock dust in entries and roadways is the modern way of preventing explosions in bituminous coal mines and is extensively followed in Great Britain and the United States. Limestone will be used for grinding up a fine dust for the purpose, and the mines will be required to install equipment accordingly.

A note on the progress of the movement to eliminate coal dust explosions in mines by the use of rock dust was given in the LABOUR GAZETTE, May, 1925.

Personal Factor in Accident Causation

The Industrial Fatigue Research Council of Great Britain recently published the results of a psychological study of individual differences in accident rates. It is an acknowledged fact, they state, that the physical safeguarding of machinery and plant, however perfect, cannot reduce industrial accidents below a certain limit, and of the remainder, whilst many no doubt are due to pure chance and accordingly unavoidable in the strict sense, others again must be attributed in a greater or less degree to the personal characteristics of the victim himself.

The report finds that it is practicable to determine in a rough way the probability of any individual sustaining an undue number of accidents, and as more research work is done and the methods become more refined, this probability should tend to approximate more and more to certainty. It must, however, be borne in mind that at present the reliability of the tests has not been established, and until this is done they cannot safely be used for prognosticating the accident proneness of individuals. A relationship has been shown to exist in the subjects examined between accidents on the one hand, and poor "aesthetokinetic co-ordination" and nervous instability on the other. There is a slight indication that accident-prone persons are industrially inefficient and more liable to report sick, and so re-act unfavourably to their total environment, but this awaits confirmation. The final weighted results show a difference of 48 per cent in accident rate between those above and those below the averages in the tests.

Need for First Aid

The Ontario Workmen's Compensation Board awarded in January over half a million dollars in benefits for industrial accidents. The total was $538,374.81, of which $461,933.52 was for compensation and $76,441.29 for medical aid and hospital services. The figures are over $113,000 higher than in the same month in 1926. During the month there were 5,293 accidents reported to the Board, which included 29 fatal cases. This is somewhat lower than December, 1926, when there were 5,411 accidents reported, including 34 fatalities.

Speaking of these figures, Mr. R. B. Morley, general manager of the Industrial Accident Prevention Associations, called attention to the fact that death cases and serious disabilities had recently shown an upward trend. He referred particularly to a case where a worker, while applying belt dressing was drawn into the pulley and killed, owing to the sweater he was wearing being caught on the line shaft. Another accident resulted in death by burning owing to handling of gasoline in an unsafe manner. Two other recent fatalities in industry were attributed to blood poisoning following very slight cuts. Mr. Morley called attention to the need for competent first aid for all cuts and scratches, no matter how slight.

Safety Record of International Harvester Plant at Chatham, Ontario

The International Harvester Works of Chatham, Ontario, recently established a world record among factories employing 100

or more hands, by going 908 days without a single loss-time accident. The record concluded last June when one of the employees met with a minor accident, which, however, necessitated the loss of time from the factory. One other accident of a slight nature also involving loss of time on the part of the employee occurred during 1926—only two minor accidents for the whole year. The record was accomplished by the influence of the Works Council among their fellow-employees in creating a safety spirit which is still being maintained to a very high degree throughout the factory.

Conditions in Soviet Russia

The Seventh Congress of Trade Unions in Russia, which was recently held at Moscow, was an event of great importance in the economic and social life of Soviet Russia. The following questions were discussed: (1) the present situation of trade unionism in Soviet Russia; (2) conditions of labour; (3) the industrial situation; (4) workers' co-operation; (5) policy in respect of wages and collective agreements; and (6) education and trade union propaganda.

The International Labour Office, in its weekly publication *Industrial and Labour Information,* is summarizing in a series of articles the discussions at this conference.

Mr. Schmidt, Commissary of Labour, dealt at length with various labour questions and explained the policy pursued by the Commissariat of Labour. His address was concerned mainly with the protection of the workers and with unemployment. The following is a résumé of the statements made and views put forward by him, together with facts quoted by various delegates who took part in the discussion.

Unemployment.—Unemployment had tended to increase of late years, but the events of last year had given rise to considerable anxiety. During the year, industry had absorbed 400,000 fresh workers, not counting seasonal and temporary work which had given employment to a considerably larger number of workers than hitherto; yet the number of registered unemployment was about 100,000 more than a year ago. At the end of 1926 the labour exchanges registered 1,023,000 unemployed. To this statement of Mr. Schmidt should be added the fact that the number of unemployed trade unionists registered with their trade unions is more than one million, and that unemployed trade unionists constitute about one-half of the total number of the unemployed. The total should therefore be put at more than 2,000,000. Further, in view of the fact that registration with the labour exchanges is optional, many unemployed persons among seasonal workers, or workers who come from the country, fail to register with them. Moreover, a large number of seasonal workers are without work for about half the year. The great mass of the unemployed is composed of labourers, of peasants who come into the towns to earn their living, of seasonal workers who prefer to remain in the urban centres rather than to return to their villages and of intellectual workers and persons dispossessed by the revolution, who are now in search of employment. As regards unemployment among young persons, there are, according to the representative of the Young Communists, more than a million young persons under 18 years of age who are entirely without work. Representatives of the various trade unions at the Conference pointed out that the unemployment among skilled workers was more serious than had been stated by Mr. Schmidt, particularly in the case of the metal workers, workers in the printing trades and textile workers. Moreover, almost all the speakers accused the Commissariat of Labour and its accessories, the labour exchanges, of failure to exert sufficient energy in the campaign against unemployment.

As preventive measures, the Commissary of Labour recommends reduced hours of work, and the employment on other work of workers whose posts are suppressed for reasons of economy, i.e., on secondary work in the same undertaking, so long as the crisis persists. The Commissariat of Labour will also conduct an energetic campaign against unemployed persons who refuse to accept work which is offered to them, even if this work is not their usual occupation, and also against unmarried unemployed who are unwilling to change their place of residence when work is offered to them in another district. Such persons will be deprived of unemployment allowances and in the event of a second offence will be struck off the registers of labour exchanges.

Safety of the Workers.—The marked increase in the growth of accidents is attributed to the following causes: (1) Defective machinery and inadequate safety regulations in undertakings; (2) the systematic opposition offered by the directing organizations of state industry to measures proposed for industrial safety; (3) the lack of energy and perseverance on the part of organizations of the Commissariat of Labour; and (4) the inefficiency of factory inspection.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

National Conference on Technical Education

The second national conference on technical education met in Ottawa, from February 9 to 11 inclusive, at the call of the Honourable Peter Heenan, Minister of Labour. Delegates representing the educational departments in every province were in attendance.

The conference dealt with the problems of vocational education with particular reference to the distribution and administration of federal grants under the Technical Education Act. Among the topics discussed were the following:—

1. The purpose and aims of vocational courses in secondary schools.
2. The relation between vocational schools and industry.
3. The scope and limitations of vocational work on which federal grants are paid, and other problems relating directly to the administration of federal grants.

This conference was the second of its kind called by the Federal Department of Labour, the first being held in October, 1920, following the enactment of the Technical Education Act, under which the federal government votes annually the sum of one million dollars for the purpose of promoting vocational education in the various provinces. This money is allotted to the provinces in proportion to population and paid in the form of grants equalling the sum expended by each provincial government on vocational education of less than college grade.

The following is a list of the delegates in attendance at the conference:—

Prince Edward Island.—Hon. James D. Stewart, Premier of Prince Edward Island, Charlottetown. Mr. W. Boulter, Deputy Minister of Agriculture, Charlottetown. Mr. H. H. Shaw, Superintendent of Education, Charlottetown.

Nova Scotia.—Dr. H. E. Munroe, Superintendent of Education, Halifax. Dr. F. H. Sexton, Director of Technical Education, Halifax. Dr. M. Cumming, Secretary of Agriculture, Truro.

New Brunswick.—Dr. W. S. Carter, Superintendent of Education, Fredericton. Mr. W. K. Tibert, Director of Vocational Education, Fredericton.

Quebec.—Dr. A. Frigon, General Director of Technical Education, Montreal.

Ontario.—Mr. D. A. Campbell, Director of Technical Education, Toronto. Mr. F. S. Rutherford, Assistant Director of Technical Education, Toronto. Miss Alice Hamill, Organizer of Home Economics Education, Toronto.

Manitoba.—Dr. Robert Fletcher, Deputy Minister of Education, Winnipeg.

Saskatchewan.—Mr. D. P. McColl, Superintendent of Education, Regina.

Alberta.—Mr. W. G. Carpenter, Director of Technical Education, Calgary.

British Columbia.—Mr. John Kyle, Organizer of Technical Education, Victoria.

A full report on the proceedings of this convention wil be published shortly by the Department.

Technical Schools and Engineering Education.

The following extracts from the preliminary report of the Board of Investigation and Co-ordination published by the Society for the Promotion of Engineering Education in November last, indicate the relationship which should exist between industrial education provided by vocational schools and technical institutes, and that provided by engineering colleges and universities.

Types of Engineering Activity.—The recruitment and training of men for all grades of engineering activity, vocational as well as professional, call for an educational program of wider and more varied range than can be provided efficiently in a single type of institution. In facing the question of what part of the entire field should be the special concern of the engineering college and what other types of institutions and courses are needed, the Board has envisaged the following types and grades of activities as falling within the engineering field, broadly conceived:

1. Engineering activities of an expert character; concerned with planning, designing, research, establishing methods, the examination of projects, and the like; commonly involving an individual or semi-individual "professional" status; and conveniently designated as "professional practice." Examples:—
   (*a*) Private and consulting practice;
   (*b*) Federal, state and municipal professional service; e.g., Engineer of the Coast and Geodetic Survey, Engineer of the State Board of Health, etc.;
   (*c*) Teaching and research in educational and research institutions;
   (*d*) Industrial service in a staff capacity concerned with methods, as distinct from

a line capacity concerned with execution; e.g., designing engineer, research engineer, rate engineer, etc.

2. Major administrative activities involving the application of engineering methods and requiring a background of technical knowledge, as well as executive ability of a more general order. Examples:—

(*a*) Major executive of an engineering industry; e.g., president, vice-president, chief engineer, general manager, etc.;
(*b*) Functional executive in a line capacity relating to production, purchasing, plant, personnel, sales, accounts, finance, and the like; e.g., manager, superintendent, etc.;
(*c*) Public administrative service; e.g., city manager, highway commissioner, etc.;
(*d*) Private business proprietorship; e.g., jobber, contractor, manufacturer, etc.

3. Technical service in an auxiliary capacity; e.g., instrument man, draftsman, specification editor, laboratory assistant, etc.

4. Administrative service in a secondary line capacity, e.g., minor executive, foreman, etc.

5. Commercial service in a secondary capacity, e.g., purchasing agent, sales representative, etc.

Types of Educational Service.—Limiting our consideration to graduates of secondary schools who desire preparation for activities in the engineering field, as outlined above, the Board recognizes that the following types and grades of educational service should be provided;

1. For secondary school graduates intending to devote for a period their principal efforts to further education;

(*a*) A complete college program directed principally to a thorough grounding in the underlying sciences, the principles and methods of engineering, and the related language processes, and to the foundations of humanistic culture;
(*b*) An extended college program in arts and sciences so co-ordinated with the requirements of engineering colleges that the student may transfer to the latter on advantageous terms;
(*c*) A junior college program preparatory to the upper years of the engineering college;
(*d*) A junior college program of technical character, suitable as a terminal program;
(*e*) A thorough and intensive program of technical training, briefer, less theoretical and more specialized than the curriculum of an engineering college.

2. For secondary school graduates who are permanently employed;

(*a*) Part time day continuation schools under the auspices of the public, the industries, or welfare organizations;
(*b*) Evening technical schools devoted to intensive and specialized instruction;
(*c*) A program of extension education by correspondence, principally of advanced vocational grade.

The auxiliary technical services and the minor supervisory and commercial activities associated with engineering are not recruited most effectively from the by-products of a program of professional training, nor are they adequately filled by using them as training assignments for men to be advanced rapidly to the higher types of engineering responsibility. These activities should be included in the objectives of a distinct, non-collegiate type of technical education, briefer, more intensive and more specialized than the programs of the engineering colleges.

Secondary school graduates who purpose definitely to enter the technical, supervisory and commercial activities auxiliary to engineering, and who desire a specialized technical training rather than an extended fundamental grounding, are best served, in general, by a course in a technical institute or corporation school of non-collegiate type, or in a junior college organized on similar lines.

It is desirable that students of the type referred to above should be directed to non-collegiate technical schools wherever these are available, rather than to engineering colleges. In regions where technical institutes do not exist and where the junior colleges are not equipped to meet the need, it may be the duty of the engineering colleges to provide an intermediate technical training, either by special short curricula or by a suitably arranged introductory stage of the regular curriculum.

The present agencies and programs of engineering education fail to supply an adequate recruitment for the line or operating direction of industry, as distinct from its expert staff activities. Training for line duties requires an extended practical training gained through actual performance in industry, as well as sound educational grounding and comparatively few men are disposed to seek such a training after graduation. The co-operative type of program has given indications of unique merit as a means of meeting this need.

Present facilities for the non-collegiate type of technical education are wholly inadequate for the proper recruitment of the auxiliary technical, supervisory and commercial activities associated with engineering.

A curriculum organized on the co-operative plan, so as to combine high grade educational facilities with industrial experience which is systematically administered and subordinated to educational aims, is an acceptable alternative to the usual college program and affords in addition an adjustment of the student to the requirements of industry such as ordinarily follows after graduation. The adoption of the co-operative plan as a means of covering deficiencies of educational organization and facilities is deprecated.

The influence at the command of the engineering colleges and the professional societies of engineers should be employed to direct new entrants to the realm of technological education into the now inadequately filled fields of the technical institutes and the vocational schools. To this end the engineering colleges should lend their assistance and counsel in shaping suitable programs for other types of technical schools and in giving their work a recognized educational status.

Suggestions and Recommendations

A selective plan of admission, designed to check the entrance of improperly qualified students at the outset, is highly desirable.

Encouragement and assistance should be given to the establishment and development of institutions offering briefer and more intensive programs of technical education which are better suited to many students who now enter engineering colleges and are eliminated an non-graduates.

Educational Guidance before Admission.—Literature designed to acquaint high school students with engineering and with engineering education should be prepared by representatives of this Society in co-operation with representatives of the secondary schools. It should follow the lines laid down by the Report of the Committee on Engineering Students and Graduates. It should be made available for distribution by the colleges.

Sections and branches of the Society may well include conferences with groups of secondary school teachers and with parent-teacher associations in their activities.

Addresses by engineering teachers before high school student bodies, with provision for personal interviews with students who seek them, should be arranged on the initiative of individual colleges.

Joint Agency of Co-operation.—A joint agency should be created on the initiative of this Society for co-operation with organizations of secondary schools and secondary school teachers. Its activities should include steps toward educational guidance as outlined above, efforts to strengthen the status in the secondary curriculum of subjects which are an essential preparation for engineering study in the secondary curriculum, joint formulation of proper entrance requirements and tests, and the development of means for the more discriminating selection of entering students.

The Foreman's Place in Safety

J. F. Currie, safety engineer, writing in the *California Safety News*, says: "The foreman, without doubt, is the prime or principal factor in accident prevention. With his whole-hearted support and assistance, we may accomplish success, but without this support and assistance, safety, as far as that individual department or plant is concerned, is doomed to a dismal failure. The foreman is the keyman to safety. In other words, he is the middleman between the employer and the employee, and on his attitude toward the safety of the employees the whole structure of safety must stand or fall. The attitude of the foreman in regard to safety is reflected in the attitude of the employees toward the same objective. If his attitude is one of sympathy toward the safety movement, this attitude will show results in the reduction of accidents in his department.

"In one of the largest industrial plants in the world, the accidents are charged up to the costs of operating the individual department, the idea being that accident prevention is the duty of each foreman and that by the number and severity of accidents in his department, his personal value and efficiency may be accurately determined by the management."

A world record in safe mine operation has been made by the Muncie mine of the Federal Mining and Smelting Company, in the Oklahoma section of the Joplin-Miami zinc and lead district. On December 15, 1926, this mine had operated since July 23, 1925, without a single lost-time accident. This period covered a total of 37,785 man-shifts. The average number of men employed at the mine was 80.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Canada and International Affairs

IN an article published in the January issue of the Bulletin of the League of Nations Society in Canada, Dr. W. A. Riddell, Canadian Advisory Officer at Geneva, says:

The Canadian Government, with commendable insight, has from the beginning realized the importance of Geneva, and two years ago accredited a permanent representative to the League of Nations and the International Labour Organization, under the title of Dominion of Canada Advisory Officer. Our obligations under the Treaty of Peace practically imply that we shall take part in the activities of the League and the Labour Organization, which involves sending delegates to the Assembly, the Labour Conference, and other conferences called from time to time, and to the quarterly meetings of the Governing Body of the International Labour Office.

Canada's distance from Geneva has made it both difficult and costly always to secure adequate representation at these meetings. It was therefore to avoid these handicaps and to give continuity to our representation that a permanent Advisory Officer was duly accredited to the League of Nations. Since my appointment almost two years ago, I have continuously represented the Minister of Labour at the meetings of the Governing Body, have been a member of the Canadian delegation to the Sixth and Seventh Sessions and the Special Session of the Assembly, the Seventh, Eighth and Ninth Sessions of the International Labour Conference, and the Second Passports Conference, and have represented the Canadian Government at the Second Opium Conference, the Arms Control Conference, and the Third International Conference of Labour Statisticians. Naturally I have reported on all these conferences and have tried to keep the Government informed of the developments in the various activities of the League and Labour Organizations.

The office provides clerical assistance for the Canadian delegations to the various conferences held in Geneva. Previously secretaries were brought from Canada for these meetings at considerable expense. The office also seeks as far as possible to keep Canada to the fore in Geneva by trying to secure more adequate representation on the staff of the secretariat and on the numerous committees of the League and the Labour Organization. It is also necessary to see that references to Canada in articles appearing in the publications of the League and the Labour Office are accurate and at the same time do justice to Canada's importance. The office is a headquarters for Canadians coming to Geneva. Information is given concerning the various activities of the League and Labour Office, and, whenever this is desired, arrangements are made for visits to the Secretariat of the League and the Labour Office. One of the three rooms of our "palatial offices," reference to which was made in the press, has been set aside as a reading room for the use of our visitors.

Canada, from the beginning, has had an excellent record in Geneva. She has been fortunate in the men she has sent over to represent her. Possibly because of their experience of our rather complex federal-imperial constitutional system, our delegates have shown a peculiar aptitude in dealing with the constitutional problems of the League and Labour Organization. The Canadian delegation threw a bomb into the First Assembly, in the shape of a proposal "that Article 10 of the Covenant be and is hereby struck out." During the First and the next three Assemblies, this question was one of the most important presented for consideration. Committee after committee tried to shelve it, but the skill and tenacity of four Canadian delegations finally succeeded in securing an interpretative declaration defining the obligations of the members under this Article, which left no doubt as to its meaning and accomplished what Canada had long desired.

At the First International Labour Conference, Mr. Rowell, as Chairman of the Committee on admission of new members, found himself in a minority of one on this Committee, but notwithstanding he defended his report with such skill and clarity at the plenary meeting of the Conference that it was adopted by a large majority.

The Fourth International Labour Conference was called upon to deal almost entirely with constitutional questions, the most important being that of changing the basis of selection of the permanent members of the Governing Body. Part XIII of the Treaty of Versailles had laid down that the permanent members were to be chosen on account of their industrial importance. As a Committee of the League appointed to determine the states of chief industrial importance had reported that three members of the British Commonwealth (Great Britain, Canada and India) would be entitled to permanent seats on the Governing Body, certain European countries were determined to avoid this by limiting the permanent seats to those states which already had permanent seats on the Council of

the League. After a Committee of the Labour Conference had declared by 20 votes to 4 in favour of the change, the Canadian delegation determined to defend its case before the Conference. This Mr. Lapointe did, in a speech not soon to be forgotten by those who heard it, with the result that the proposal of the Committee was defeated by an overwhelming majority.

From the beginning of her connection with the League, Canada has shown keen interest in the social and humanitarian questions considered in the Fifth Committee of the Assembly; and a Canadian has twice held the position of Chairman of this Committee, and once that of Rapporteur. The Canadian delegations have never lost an opportunity to commend arbitration and disarmament to the Assembly, and to point out that their practical results have been a hundred years' peace between Canada and the United States. There have been different views as regards Canada's attitude to the Treaty of Mutual Assistance and the Protocol for the Pacific Settlement of International Disputes, but experience, I believe, is showing that the Canadian attitude toward these draft-security pacts of the League has been justified. It has been evident to many that there could be no lasting peace in Europe until Europe was prepared to agree voluntarily to settle her differences, as we had become accustomed to settle ours, by the more civilized method of conciliation and arbitration. If Canada and Great Britain had not refused to be a party to the Protocol, it is doubtful whether the Locarno Treaties would have been negotiated and signed. Instead we might have had the highly unsatisfactory situation of certain nations of Europe still at enmity, and the rest of the world guaranteeing that these nations would remain at peace.

Lead Paint Protection Act in Great Britain

The Lead Paint (Protection against Poisoning) Act of Great Britain, took effect on January 1, having received the Royal Assent on December 15. It is intended to give effect to the Draft Convention adopted at the third session of the International Labour Organization at Geneva concerning the use of white lead in painting (references to the bill were made in the LABOUR GAZETTE, July, 1926, page 693; September, 1926, page 847). The Act empowers the Home Secretary to make regulations for preventing danger from the use of lead paint to persons employed in or in connection with the painting of buildings. It makes it illegal, on and after November 19, 1927, to employ any woman or young person in painting any part of a building with lead paint. Certain exceptions to this provision, however, are permitted. All persons employing others in painting buildings, whether using lead paint or not, are required to keep a register on a form supplied by the Home Secretary. They must immediately report any case of lead poisoning among their employees. The powers of factory inspectors are extended to cover work in connection with the painting of buildings where there is risk of lead poisoning. Among the regulations issued under the new Act is one providing that no painted surface shall be rubbed down or scraped by a dry process, except where the employer, after taking all reasonable steps for the purpose, has satisfied himself that the surface is not painted in whole or in part with lead paint.

Ratification of Draft Conventions

Industrial and Labour Information, the weekly publication of the International Labour Office, announces in its issue of January 3 that there have been 215 ratifications of Draft Conventions of the International Labour Conference to date registered with the Secretariat of the League of Nations (including 4 conditional or with delayed application), which indicates a gain of 30 over the total registered at the beginning of last year. In addition to the number registered, ratification has been approved in 39 cases and recommended in 154 others.

The list of ratifications compiled by the International Labour Office does not show in the case of federal countries such as Canada information concerning legislation in the separate provinces, etc., approximating to or in conformity with the Conventions.

The Draft Conventions registered are as follows:—

Australia.—Employment for Seamen.

Austria.—Hours, Unemployment, Night Work (Women), Night Work (Young Persons), Minimum Age (Agriculture), Rights of Association (Agriculture), White Lead.

Belgium.—Hours, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Employment for Seamen, Rights of Association (Agriculture), White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Bulgaria.—Hours, Unemployment, Childbirth, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Employment for Seamen, Minimum

Age (Agriculture), Rights of Association (Agriculture), Workmen's Compensation (Agriculture), White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Canada.—Minimum Age (Sea), Unemployment Indemnity, Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Chili.—Hours, Childbirth, Minimum Age (Industry), Night Work (Young Persons), Rights of Association (Agriculture), Workmen's Compensation (Agriculture), White Lead, Weekly Rest (Industry).

Czechoslovakia.—Hours, Night Work (Women), Minimum Age (Industry), Minimum Age (Agriculture), Rights of Association (Agriculture), White Lead, Weekly Rest (Industry).

Denmark.—Unemployment, Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Workmen's Compensation (Agriculture), Minimum Age (Trimmers and Stokers).

Esthonia.—Unemployment, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Employment for Seamen, Minimum Age (Agriculture), Rights of Association (Agriculture), Workmen's Compensation (Agriculture), White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Finland.—Unemployment, Minimum Age (Sea), Employment for Seamen, Rights of Association (Agriculture), Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

France.—Unemployment, Night Work (Women), Night Work (Young Persons), White Lead, Weekly Rest (Industry).

Germany.—Unemployment, Employment for Seamen, Rights of Association (Agriculture), Workmen's Compensation (Agriculture).

Great Britain.—Unemployment, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Rights of Association (Agriculture), Workmen's Compensation (Agriculture), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea), Workmen's Compensation (diseases), Equality of Treatment (Accidents).

Greece.—Hours, Unemployment, Childbirth, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Employment for Seamen, White Lead.

India.—Hours, Unemployment, Night Work (Women), Night Work (Young Persons), Rights of Association (Agriculture), Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Irish Free State.—Unemployment, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Minimum Age (Agriculture), Rights of Association (Agriculture), Workmen's Compensation (Agriculture).

Italy.—Hours, Unemployment, Night Work (Women), Night Work (Young Persons), Unemployment Indemnity, Minimum Age (Agriculture), Rights of Association (Agriculture), Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Japan.—Unemployment, Minimum Age (Industry), Minimum Age (Sea), Employment for Seamen, Minimum Age (Agriculture), Medical Examination (Young Persons at Sea).

Latvia.—Hours, Childbirth, Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Employment for Seamen, Rights of Association (Agriculture), White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Netherlands.—Night Work (Women), Night Work (Young Persons), Minimum Age (Sea), Rights of Association (Agriculture), Workmen's Compensation (Agriculture).

Norway.—Unemployment, Employment for Seamen.

Poland.—Unemployment, Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), Unemployment Indemnity, Employment for Seamen, Minimum Age (Agriculture), Rights of Association (Agriculture), Workmen's Compensation (Agriculture), White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Roumania.—Hours, Unemployment, Childbirth, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons), Minimum Age (Sea), White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

South Africa.—Unemployment, Night Work (Women), Equality of Treatment (Accidents).

Spain.—Unemployment, Childbirth, Minimum Age (Sea), Unemployment Indemnity, White Lead, Weekly Rest (Industry), Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea).

Sweden.—Unemployment, Minimum Age (Sea), Employment for Seamen, Minimum Age (Agriculture), Rights of Association (Agriculture), Workmen's Compensation (Agriculture), White Lead, Minimum Age (Trimmers and Stokers), Medical Examination (Young Persons at Sea), Workmen's Compensation (Accidents), Equality of Treatment (Accidents).

Switzerland.—Unemployment, Night Work (Women), Minimum Age (Industry), Night Work (Young Persons).

Japan and the Draft Convention Relating to Children's Employment

Formal ratification by Japan of a Convention of the International Labour Conference of 1919, fixing the minimum age of admission of children to industrial employment, was registered by the Secretariat of the League of Nations on August 7th. This convention forbids the employment of children under fourteen years of age in industrial undertakings. At the time the convention was adopted in 1919, a special provision was inserted in the terms following, applicable to Japan:—

(*a*) Children over twelve years of age may be admitted into employment if they have finished the course in the elementary school;

(*b*) As regards children between the ages of twelve and fourteen already employed, transitional regulations may be made.

The provisions in the present Japanese law admitting children under the age of twelve years to certain light and easy employments shall be repealed.

The Government of Japan had previously ratified five other conventions of the International Labour Conference as follows: Convention respecting Unemployment, which provides for the establishment of a free public employment service; Convention fixing the minimum age for the admission of children to employment at sea, which forbids the employment of children under fourteen years on vessels engaged in maritime navigation; Convention for establishing Facilities for finding Employment for Seamen, which provides for the organization of public employment offices through which seamen may find employment without charge; Convention respecting the age of Admission of Children to Employment in Agriculture, which forbids the employment of children under fourteen years in agricultural undertakings, save outside the hours fixed for school attendance; Convention concerning the compulsory Medical Examination of Children and Young Persons employed at Sea, which requires the production of a medical certificate attesting fitness for such work in the case of all young persons under eighteen years of age.

Legislation has also been adopted in Japan dealing with four other conventions of the International Labour Conference as follows: Convention concerning the Employment of Women before and after Childbirth; Convention concerning Employment of Women during the Night; Convention concerning the Night Work of Young Persons employed in Industry; and Recommendation concerning the application of the Berne Convention of 1906, on the Prohibition of the use of White Phosphorus in the Manufacture of Matches.

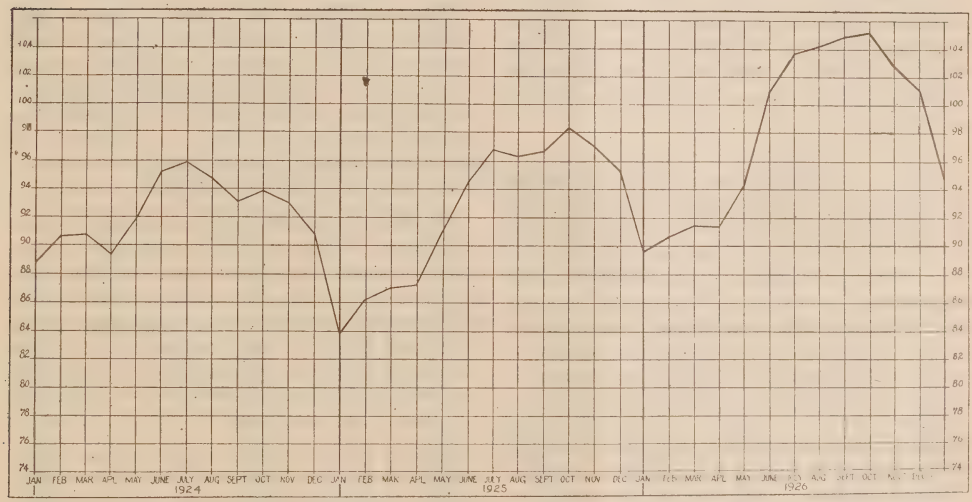
Certain amendments which were made to the Factory Act of Japan in 1923 have now been put into effect and mark a considerable advance in Japanese social legislation. As a result of the amendments introduced, the Factory Act will now cover 46,400 undertakings employing 1,636,000 men and 896,000 women workers. Among other things it reduces hours of work and deals with the prohibition of night work of women and young persons, maternity benefits, etc. The minimum age for the admission of children in industry is fixed on principle at 14 years instead of 12 years. It will be seen from the foregoing that Japan is making determined progress on the path of social reform. Under the guidance and inspiration of the decision of the International Labour Conference, she is progressively applying the principles laid down in the various conventions.

The Alberta Electrical Contractors' Association, at their annual meeting held at Calgary in January, recommended that provision be made whereby the provincial government would appoint a board of examiners for the examining, licensing and regulating of electrical workers throughout the province, such board to act in consultation with the executive of the association. They suggested further that rules and regulations be made for the examination of candidates for contractors' and journeymen's licenses, and to fix what fees should be paid to the government by such contractors or journeymen for the licenses and examinations.

THE EMPLOYMENT SITUATION AT THE BEGINNING OF JANUARY, 1927, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THE seasonal curtailment in employment registered at the beginning of January, 1927, involved a rather larger number of workers than on January 1, 1926, but the percentage loss was practically the same, while both absolute and proportionate reductions were smaller than on the corresponding date in the first five years of the record. Statements were tabulated by the Dominion Bureau of Statistics from 5,851 firms whose staffs declined from 833,638 on December 1 to 781,559 at the beginning of January, a decrease of 52,079 persons, or 6.2 per cent. Reflecting this contraction, the index number on January 1, 1927, stood at 94.8, as compared with 101.1 in the preceding month and with 89.6, 83.9, 88.7, 86.3, 77.9 and 88.7 on the same date in 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The situation thus continues to be much more favourable than in the corresponding month of any other year of the record.

Manufacturing, construction, transportation, mining and logging reported pronounced seasonal curtailment, while employment in trade, though not at its holiday maximum, was nevertheless more active than on December 1; the index was, in fact, higher than in any other month of the record which was begun in 1920.



Employment by Economic Areas

All except the Maritime Provinces reported declines, those in Quebec and Ontario being most extensive.

Maritime Provinces.—Manufacturing (chiefly of food and iron and steel products), construction and trade, were seasonally slacker but greater increases were noted in logging and transportation. The improvement in the latter, which was especially noteworthy, was due to the re-opening of the winter ports. Statistics were received from 509 employers with 67,331 workers, or 4,342 more than in the preceding month. Much smaller gains were indicated on January 1, 1926, and the index then was over six points lower.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January 1920, as 100.

Quebec.—Considerable contractions were shown in Quebec, where 21,122 persons were released from the staffs of the 1,258 co-operating firms, who employed 217,669 workers. This reduction was larger than on the same date of last year, though smaller than at the beginning of 1925, but the situation was much more favourable than on January 1 of any other year of the record. Manufacturing, especially in the iron and steel, tobacco, beverage and pulp and paper industries, showed marked curtail-

ment, as did construction and transportation. The only significant increases reported were in logging and retail trade.

Ontario.—The losses registered in Ontario were smaller than at the beginning of January of any other year of the record, and the index on January 1, 1927, was at its highest for that date in the years since 1920. Data were received from 2,698 employers with 323,633 persons on payroll, as compared with 344,603 on December 1. Manufacturing and construction showed the greatest reductions, but there were also decreases in transportation, mining and communication. Within the manufacturing group, there were important recessions in the iron and steel, lumber, food, textile and pulp and paper industries. Logging and trade, however, showed considerable improvement, although employment in the latter was not so active as just before Christmas.

Prairie Provinces.—Manufacturing, particularly of food products, was slacker, and there were also heavy declines in construction. Smaller losses were noted in mining, transportation, trade and communication, while the only general increases were in logging. A combined working force of 107,065 persons was reported by the 767 firms making returns who had 111,996 in the preceding month. These contractions were larger than those noted on January 1, 1926, when the index was several points lower.

British Columbia.—More extensive reductions than have been reported at the beginning of January of the last few years were indicated in British Columbia, where unfavourable weather conditions and holidays had an adverse effect upon industry, particularly upon logging and lumbering. Construction, mining and manufacturing also showed curtailment. Statements were received from 621 employers, whose staffs aggregated 65,861 on January 1 as against 75,259 in the preceding month. Employment was at a rather lower level than on the corresponding date last year, though higher than on January 1 in the years 1921 to 1925.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

There were contractions in the eight cities for which separate tabulations are made, those in Montreal, Windsor and Toronto being most pronounced.

Montreal.—The decrease in Montreal involved a rather smaller number of workers than that registered on January 1, 1926, when conditions were less favourable. Statements were received from 676 firms with 104,589 employees, as compared with 113,743 in the preceding month. Manufacturing, especially the food, beverage, tobacco and iron and steel divisions, showed important declines; construction and transportation were also seasonally slacker.

Quebec.—Seasonal curtailment in shipping caused a loss in Quebec, where 85 employers reduced their staffs from 9,128 persons on December 1, to 8,776 at the beginning of January. Approximately the same sized decrease was noted on the corresponding date in the preceding year, but the index then was lower.

Toronto.—Employment in Toronto showed a seasonal drop that was considerably less than on January 1 of any of the four preceding years, in all of which the index was lower than on the date under review. There were general reductions in manufacturing, the largest being in food and iron and steel plants. Construction, communication and transportation were also slacker, while retail trade showed important gains over December 1. Statements were received from 773 firms with 96,769 employees, as compared with 100,599 in their last report.

Ottawa.—Lumber mills showed seasonal curtailment, as did construction. The working forces of the 127 reporting establishments aggregated 9,270 persons, or 623 fewer than at the beginning of December. Although this reduction was greater than that recorded on the corresponding date of last year, employment was in practically the same volume.

Hamilton.—Manufacturing, especially iron and steel plants, released employees, while there were also decreases in transportation, construction and trade. Data were tabulated from 201 firms in Hamilton with 28,399 employees, as against 29,495 in the preceding month. The shrinkage recorded on January 1, 1926, involved a rather larger number of workers, and the index then was lower by several points.

Windsor and the Other Border Cities.—The closing of several important automobile plants for inventory purposes caused the usual pronounced contractions in employment in the Border Cities at the beginning of January; 86 employers reported 6,400 workers, or 4,558 less than on December 1. The situation was practically the same as on the corresponding date last year.

Winnipeg.—Construction, manufacturing and trade registered the greatest declines in Winnipeg, where the 286 co-operating firms reported 27,804 persons on payroll, compared

(Continued on page 194)

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

TABLE I.—INDEX NUMBERS OF ALL EMPLOYMENT BY ECONOMIC AREAS, AND OF DOMINION EMPLOYMENT IN MANUFACTURING

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia	All manufacturing
1921							
Jan. 1	88·7	95·9	88·3	83·4	95·7	86·6	78·4
1922							
Jan. 1	77·9	78·1	74·4	78·3	82·8	79·9	68·7
1923							
Jan. 1	86·3	90·8	83·5	85·6	90·0	88·3	78·1
1924							
Jan. 1	88·7	86·3	90·5	86·1	94·3	90·9	80·1

(Continued from page 192)

with 29,334 in the preceding month. Although this reduction involved a larger number of workers than than noted on January 1, 1926, the index then was some 10 points lower than on the date under review.

Vancouver.—Employment in lumber mills, construction and transportation showed a falling off, and trade was also slacker. Returns were compiled from 226 employers with 23,297 workers or 2,155 less than on December 1. Rather less extensive losses were registered on the corresponding date last year, when the situation was not quite so favourable.

Index numbers by cities are given in Table II.

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

Industries	[1]Relative weight	Jan. 1 1927	Dec. 1 1926	Jan. 1 1926	Jan. 1 1925	Jan. 1 1924	Jan. 1 1923

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Manufacturing Industries

The losses registered in manufactures were somewhat larger than on January 1, 1926, but were smaller than on the same date in previous years of the record, while the index number on the date under review was higher than at the beginning of any other year since 1920. The most extensive reductions were in iron and steel, lumber, food, pulp and paper, textile, tobacco and beverage factories, but all divisions recorded curtailment. As in former years, these declines were chiefly due to shutdowns for holidays and inventories, and considerable recovery may be looked for in the next report. Statistics were compiled from 3,747 manufacturers employing 430,730 operatives, compared with 461,412 on December 1.

Animal Products, Edible.—Continued reductions on a large scale were reported in this division; all branches reported curtailment, those in meat and fish preparing and preserving plants being most extensive. Statements were received from 151 manufacturers with 13,735 employees, as compared with 15,218 at the beginning of December. Although this loss was rather larger than that recorded on January 1, 1926, the index number then was slightly lower. All provinces reported reduced employment, but the heaviest contractions were in Ontario.

Leather Products.—Following six months of uninterrupted expansion, there was a decline in employment in leather-using factories at the beginning of January, boot and shoe and glove plants having the greatest falling-off. The shrinkage was rather smaller than on the corresponding date last year, when the index number was over seven points lower. A combined working force of 17,479 persons was reported by the 190 firms making returns, as compared with 17, 991 in the preceding month. The tendency was generally downward, but the greatest losses took place in Quebec and Ontario.

Lumber Products.—Seasonal curtailment on a larger scale than on January 1, 1926, was noted in lumber mills, 696 of which reduced their payrolls from 44,315 on December 1 to 38,327 at the beginning of January. Employment was in practically the same volume as on the corresponding date last year; sawmills registered the most pronounced shrinkage, but there were also decreases in furniture, container and other wood-using industries. There were especially marked losses in Ontario and British Columbia, but employment declined in all provinces.

Musical Instruments.—Thirty-nine manufacturers of musical instruments released 234 persons from their payrolls, bringing them to 3,322 at the beginning of January. Firms in Ontario reported the bulk of this recession, which exceeded that noted on January 1 of a year ago when the index was several points lower.

Plant Products, Edible.—There were contractions in employment in all branches of the vegetable food group, the largest being in confectionery, biscuit and canning factories. The working forces of the 307 co-operating employers totalled 25,082 persons, as compared with 29,294 in their last report. The decreases in Ontario were especially pronounced, but the movement was generally unfavourable. The reductions noted at the beginning of January last year were smaller; the index number then, however, was practically the same as on the date under review.

Pulp and Paper Products.—In spite of decided shrinkage at the beginning of January, employment in pulp and paper products was more active than in any month of the years 1920-1925. Statistics were received from 454 firms, whose staffs aggregated 54,658 persons, or 2,688 less than in their last report. The largest losses were in Quebec, although the trend was downward in all provinces. Nearly all the reductions took place in pulp and paper mills, but there were also much smaller declines in plants producing paper goods.

Rubber Products.—There was a comparatively slight decrease on January 1 in the number of persons employed by 32 rubber factories, which had 12,746 operatives as against 12,903 at the beginning of December. The most marked shrinkage was in Quebec, while improvement was shown in Ontario. Much greater contractions were reported on the corresponding date last year, when the index number was considerably lower.

Textile Products.—The 512 firms furnishing data released practically the same number of persons from their working forces as at the beginning of January, 1926, but the index number then was a few points lower than on the date under review. Their payrolls included 70,289 persons on January 1, against 72,773 in the last report. Quebec and Ontario recorded the bulk of the shrinkage, which was especially pronounced in garment and personal furnishing, knitting and woollen factories.

Tobacco, Distilled and Malted Liquors.—Shutdowns for inventories and holidays caused large reductions in employment at the beginning of January, although the shrinkage was not as extensive as on January 1 last year, when employment was in smaller

volume. Statements were tabulated from 104 manufacturers in this group employing 10,801 workers, or 1,494 less than on December 1. Practically all the loss took place in Quebec.

Chemical Products.—Employment in chemical and allied product factories, chiefly in Ontario, showed a falling off on January 1, when 499 workers were released from the payrolls of the 112 reporting manufacturers, who had 6,155 employees. Somewhat smaller losses were noted on the corresponding date a year ago; the index number then was slightly lower.

Clay, Glass and Stone Products.—Further contractions were made in employment in building material works, 113 of which reported 9,046 workers, as compared with 10,017 in the preceding month. All provinces shared in this curtailment, which was most marked in Quebec. Brick and stone yards recorded the largest shrinkage. Declines on a rather greater scale were noted on January 1, 1926, and the situation then was much less favourable.

Electric current.—There were continued decreases in the number of persons employed in electric current plants, according to statistics received from 90 producers employing 11,656 workers, or 480 less than on December 1. A considerable proportion of this contraction was in Quebec. The seasonal recession reported at the beginning of January a year ago involved a smaller number of workers, but the index was about the same as on January 1, 1924.

Electrical apparatus.—Reductions in personnel on approximately the same scale as on the corresponding date last year were reported in electrical apparatus factories, but employment at the time of writing was in much greater volume. Firms in Ontario showed most of the decline. Statements were received from 38 establishments having 10,577 employees, compared with 10,896 in their last report.

Iron and Steel products.—The automobile and other land vehicle, rolling-mill, boiler, engine and tank, agriculture implement, general plant machinery, heating appliance, iron pipe, hardware, sheet metal and other branches of the iron and steel group reported curtailment, while the only significant increase was in steel shipyards. The payrolls of the 637 co-operating factories totalled 117,244 persons, as compared with 125,088 in the preceding month. This reduction (which was most marked in Ontario, though all provinces shared in it to some extent) was larger than that recorded on the corresponding date last year, but the index number then stood five points lower.

Non-ferrous metal products.—The losses recorded in non-ferrous metal products, chiefly in the lead, tin, zinc, copper and precious metal divisions, involved a smaller number of workers than that indicated on the corresponding date last year; the index number then was over ten points lower than on January 1, 1927. Returns were compiled from 104 employers with 14,725 workers, as compared with 15,580 at the beginning of December. Ontario, British Columbia and Quebec reported practically all this reduction.

Mineral Products.—Further and somewhat greater declines were noted in this group, but the shrinkage was less pronounced than on the corresponding date a year ago. A combined working force of 9,415 persons was employed by the 77 establishments whose returns were received, and who had 9,708 persons in their employ on December 1. Quebec reported the largest contractions. The situation was more favourable than on January 1, 1926.

Logging

Logging camps registered a smaller decrease than on January 1 last year, when employment was in less volume. A combined working force of 31,782 men was reported by the 232 co-operating firms, who had 32,820 in the preceding month. There were increases in all provinces except British Columbia, where unfavourable weather retarded operations.

Mining

Coal.—Following four months of pronounced recovery in coal mining, there was a reduction of 668 persons in the number employed by 88 operators, who had 28,062 workers. The losses were heavy in Alberta, while an increase was shown in Nova Scotia. Improvement in the situation had been noted on January 1, 1926, but the index number then was several points lower.

Metallic Ores.—Employment in metallic ores showed a further recession, 374 persons being released by the 46 reporting concerns, who had 11,201 persons in their employ. This shrinkage was largely confined to British Columbia, and exceeded that recorded on the corresponding date last year. The index number then was over ten points lower.

Non-Metallic Minerals Other Than Coal.—The trend of employment in this division continued to be downward, but the losses were

greater than on January 1 a year ago and the index number then was very slightly higher. Statements were received from 66 firms employing 5,526 workers, as compared with 6,344 in the preceding month. The greatest shrinkage was in Quebec and Ontario.

Communication

Further curtailment in personnel was reported on telephones and telegraphs, but the situation continued to compare favourably with that on the corresponding date of previous years of the record. The payrolls of the 187 companies furnishing data declined from 24,764 on December 1 to 24,106 at the beginning of January.

Transportation

Street Railways and Cartage.—Employment in local transportation showed a further seasonal decline in which fewer persons were released than on January 1, 1926, when the index number was very slightly lower. A combined working force of 18,692 persons was reported by the 117 co-operating firms, who had 19,119 in the preceding month. All except the Prairie Provinces shared in the reductions.

Steam Railways.—Employment on steam railways showed a further, but rather smaller contraction; there was considerable improvement in the Maritime Provinces, but elsewhere employment declined, especially in the Prairie Provinces. The payrolls of the 101 companies and divisional superintendents making returns aggregated 78,169, as against 79,010 in their last report. The index number was rather higher than on January 1, 1926, although the shrinkage then involved a smaller number of workers.

Shipping and Stevedoring.—In spite of pronounced seasonal gains at the winter ports, employment in water transportation showed a net decline, owing to losses, chiefly in Quebec, but also in Ontario and British Columbia. This falling off was substantially smaller than that reported on December 1 last year, when the index number stood at 149.6, as compared with 170.9 on the date under review.

Construction and Maintenance

Building.—Continued curtailment of operations was shown in building construction generally; 335 contractors reduced their staffs from 32,706 at the beginning of December to 27,017 on January 1. The most pronounced declines were in Quebec where building was unusually active last season. Rather less extensive decreases were indicated on January 1 last year, but the index number then was nearly 30 points lower.

Highway.—Statements were received from 111 firms employing 5,389 workers, as compared with 11,254 in the preceding month. Quebec and Ontario reported the heaviest losses, but the movement was downward in all provinces. Large contractions were also noted at the beginnnig of January, 1926; employment then was in rather greater volume.

Railway.—A further, but smaller recession was reported in this division, in which 35 employers reported 29,375 persons on payroll, as compared with 33,490 in the preceding month. The situation was considerably better than on the corresponding date last year, when approximately the same percentage reduction was noted. Comparatively small increases were registered in the Maritime Provinces, while elsewhere employment showed a downward trend.

Services

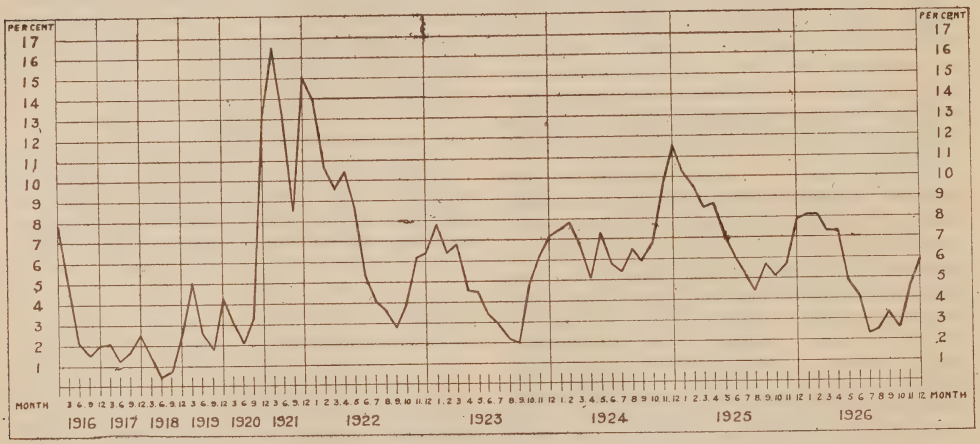
Another but less extensive contraction was reported in the service group; 171 firms employed 14,218 persons, or 154 less than in the preceding month. The index was higher than on the corresponding date of earlier years of the record, when losses on about the same scale were noted.

Trade

Retail trade afforded considerably more employment than on December 1, although it was not as active as in Christmas week. Wholesale trade, however, was slacker. The result was an increase of 637 persons in the staffs of the 559 establishments making returns, which had 65,487 employees. The index number was higher than at the beginning of any other month of the record, which was instituted in 1920. The largest gains on the date under review were in Ontario, while elsewhere the trend generally was unfavourable.

Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns for January 1, 1927.

UNEMPLOYMENT IN TRADE UNIONS DURING THE QUARTER ENDING DECEMBER 31, 1926, AS REPORTED BY UNIONS MAKING RETURNS



UNEMPLOYMENT as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in membership, upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present article on unemployment among members of local trade unions deals with the situation reported during the quarter ending December 31, 1926, and is based on the returns of the locals reporting at the end of each month during the quarter. The percentage of idleness on October 31, 1926, was 2.6, or .7 per cent lower than in September. During November and December the improvement noted in the previous month was not maintained, and conditions became gradually less favourable until at the end of December the percentage out of work stood at 5.9. The percentage of unemployment at the end of November was 4.7. The situation throughout the quarter under review followed much the same course as in the corresponding period of 1925, but the level of employment each month during the quarter was higher than in each corresponding month of 1925.

The accompanying chart shows the curve of unemployment as reported by trade unions by quarters from 1916 to 1921 inclusive, and by months from 1922 to date. From the beginning of the year until the end of August the curve showed no upward tendencies, though in February it remained on the same level as at January, and in April the same as in March. In September, however, the trend was slightly upward, followed in October again by a slightly downward tendency. At the end of November there was a sharp upward turn, followed by a continuation of the same movement in December, which showed a steady increase in unemployment. The situation, however, throughout the year 1926 was more favourable than during 1925.

When comparing the situation in October with September, Quebec unions showed the most substantial increase in employment, due largely to the better conditions in the metal trades. Minor increases also were reported in New Brunswick, Manitoba and Alberta. In the remaining provinces the declines were nominal in character. The lumber and logging industry registered a decided increase in employment. In the manufacturing industries, where a 3.1 per cent gain was recorded, iron and steel workers were much better engaged, as were also glass and textile workers, and of

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADE UNIONS
Quarterly 1916-1921, Monthly 1922-1926

the reductions the most noteworthy was among garment workers. In the building trades there was over 2 per cent of a decline, but in the transportation industry practically no change was reported.

Comparing November returns with those of October, all provinces except Saskatchewan registered less favourable conditions, the most substantial declines being those in Alberta and British Columbia, due to the decrease in employment afforded in the coal mines of the two provinces. In the manufacturing industries as a whole the situation was less favourable, though fluctuations occurred within the group. Textile workers were more fully engaged, and glass and garment workers also were afforded a greater volume of employment. Iron and steel workers, on the other hand, reported considerable idleness, due mainly to an adverse situation among railway carmen. The building trades registered more unemployment, owing to a continuation of the seasonal retrenchment in operations. In the transportation industry there was scarcely any change. Though the shipping division of the industry improved greatly, the gain was almost offset by a decline in the steam railway division. Coal miners were much slacker than in October, but among lumber workers and loggers additional employment was registered.

In making a comparison between the December situation and that of November, British Columbia was the only province to record a gain in employment, due to better conditions prevailing in the coal mines of the province. In Alberta there was no change, while of the contractions in the remaining provinces that of 2.7 per cent in Quebec was the most pronounced. In the manufacturing industries unemployment increased slightly, due to inactivity especially in the textile, glass and garment and iron and steel trades. Papermakers and hat and cap workers, on the other hand, were more active than in November. The building trades reported a considerable advance in unemployment. Transportation, especially shipping and stevedoring, afforded much less work. Coal miners, on the other hand, were much busier. Lumber workers and loggers reported 14 per cent unemployed, as compared with no idleness in November, and among fishermen there was no change in the situation.

Table I on this page summarizes the returns by provinces for each month from July, 1922, and Table III on page 204 presents the percentages of unemployment reported in the different groups of industries also by months from July, 1922.

During October the improvement over October, 1925, in the manufacturing industries was pronounced, the greater share being due to the increased volume of employment in the garment trades, supplemented by smaller gains among iron and steel and glass workers and printing tradesmen. On the other hand, hat and cap workers registered a substantial reduction, and conditions in the pulp and paper industry were slightly less favourable. The building trades showed almost 4 per cent gain in employment, and a nominal change only occurred in the transportation industry. The mining situation improved, and among fishermen there was a greater volume of

employment. Lumber workers, however, reported a small percentage of unemployment as compared with no idleness in December, 1925.

In November the situation in the manufacturing industries improved over November, 1925, the textile and garment, glass and printing trades all contributing to the gain.

Miscellaneous manufacturing industries (unclassified workers)	.....	.....	.....	.....	.....	.....	.....	.....	3	620	100	16·1	4	111	0	0

Building tradesmen reported a minor reduction in employment, and transportation a slight increase, the gains in the shipping division of the transportation industry being pronounced. Fishermen registered much slackness, and among miners there was curtailment of operations. Lumber workers were afforded much more employment.

When comparing the returns of December, 1926, with those of December, 1925, the movement in the manufacturing industries was again upward, the percentage of improvement being almost 6 per cent. Practically all tradesmen in the division contributed to the gain, the most noteworthy of which was among glass and textile and garment workers. The building trades and transportation industries also indicated a slightly upward trend, the large percentage of idleness in the shipping division of the transportation industry being more than overcome by the gain in the steam railway division. Employment for lumber

workers and loggers increased. Among fishermen the situation was considerably less favourable, and in the mining division there was a practically 3 per cent drop in employment.

The accompanying tabulation, Table II, shows the percentage of unemployment for the months of October, November and December for all Canada, and also by provinces for the month of December. For this month reports were received from 1,560 locals with a combined membership of 157,701 persons, of whom 9,349, or a percentage of 5.9, were unemployed.

EMPLOYMENT OFFICE REPORTS FOR DECEMBER, 1926

THE volume of business transacted by the offices of the Employment Service of Canada during the month of December, 1926, showed a decrease of 16 per cent in the number of placements effected, but when a comparison is made with the corresponding period of 1925 an increase of 20 per cent is recorded. The decline was mainly due to decreased placements in the logging industry, while farming, as was the case last month, also continued to show a seasonal reduction. The increase over December, 1925, was also found during the latter half of the month being quite pronounced. The ratio of vacancies to each 100 applications was 66.5 and 80.2 during the first and second half of December, 1926, in contrast with the ratios of 63.2 and 70.6 during the same periods in 1925. The ratios of placements to each 100 applications during the period under review were 65.6 and 71.2, as compared with 59.7 and 66.2 during the corresponding month in 1925.

A summary of the reports from the offices shows that the average number of applica-

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ——— Vacancies - - - - - - - - - - - - - Placements o—o—o—o—o—o

in these two groups, though minor gains were recorded in manufacturing, mining, transportation, and construction and maintenance.

The accompanying chart shows the trend of employment since January, 1924, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be noted that the curve of vacancies in relation to applications declined slightly during the first half of the month, but showed a sharp upward trend during the latter half of the period under review, while the curve of placements in relation to applications showed a steady upward trend throughout the time, the rise

tions recorded during the first half of December was 1,562 daily as compared with 1,600 daily during the preceding period, and with 1,409 daily during the corresponding period in 1925. Applications for work during the latter half of the month registered 1,227 daily in contrast with 1,115 daily during the latter half of December, 1925.

Employers notified the Service of a daily average of 1,039 vacancies during the first half and 984 during the latter half of the month under review, as compared with a daily average of 890 and 787 vacancies during the month of December, 1925. Vacancies offered to the Service during the latter half of November, 1926, averaged 1,091 daily.

The Service effected a daily average of 1,024 placements during the first half of December, of which 679 were in regular employment and 345 in work of one week's duration or less, as compared with a total average placement during the preceding period of 1,031 daily, and with 841 daily during the first half of December, 1925. During the latter half of the month under review placements averaged 874 daily (517 regular and 357 casual) as compared with an average of 738 daily during the corresponding period in 1925.

During the month of December, 1926, the offices referred 25,641 persons to vacancies and effected a total of 24,667 placements. Of these the placements in regular employment numbered 15,540, of which 12,896 were of men and 26,444 of women, while placements in casual work numbered 9,127. Opportunities for employment reported by employers numbered 18,756 for men and 7,531 for women, a total of 26,287. The number of applications for work was 36,245, of which 27,831 were from men and 8,414 from women. The following table gives the placements effected to date by the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155

NOVA SCOTIA

During the month of December positions offered through employment offices in Nova Scotia declined over one per cent from the preceding month, but were nearly 34 per cent higher than during the corresponding month of 1925. Placements showed a nominal decline only from November and were over 45 per cent higher than during December 1925. Farming was the only industrial group in which placements were fewer than in December, 1925, and in this the declines were nominal. Services was the only group to show a substantial increase. Placements by industrial divisions included manufacturing—100; logging—66; construction and maintenance—81; trade—57 and services—331, of which 201 were of household workers. During the month 169 men and 73 women were placed in regular employment.

NEW BRUNSWICK

There was an increase of nearly 3 per cent in the number of positions offered through employment offices in New Brunswick during December when compared with the preceding month, and a gain of over 28 per cent in comparison with the corresponding month of 1925. Placements were over 4 per cent lower than in November, but over 20 per cent higher than during December, 1925. Increased placements in the transportation and services groups were mainly responsible for the gains during the month under review over the corresponding month of 1925, as the changes in other divisions were small. Industrial groups in which most of the placements were effected during the month were: logging, 98; transportation, 59; construction and maintenance, 57; and services, 515, of which 311 were of household workers. Placements in regular employment numbered 201 of men and 97 of women.

QUEBEC

The demand for workers as indicated by orders listed at employment offices in Quebec during the month of December declined over 40 per cent when compared with the preceding month and nearly 11 per cent in comparison with the corresponding month of 1925. There was a decline of over 45 per cent in placements when compared with November and of nearly 8 per cent in comparison with December, 1925. Placements in the logging industry showed a substantial gain over December, 1925, but this increase was more than offset by declines in the industrial groups, the most noteworthy being services, where the demand for household workers was not fully satisfied. Industrial groups in which most of the placements were effected during the month included: manufacturing, 82; logging, 682; transportation, 50; construction and maintenance, 222; and services, 320, of which 248 were of household workers. During the month 1,020 men and 332 women were placed in regular employment.

ONTARIO

During December, offices in Ontario received orders for over 3 per cent less workers than in November, but nearly 16 per cent more than in December, 1925. Placements during December were less than one per cent below the preceding month, but nearly 12 per cent higher than during the corresponding month of 1925. The only groups to show a smaller number of placements than during the same month of 1925 were manufacturing, farming and trade, and in these the declines were small. The logging industry and construction and maintenance showed the most noteworthy gains. Placements by industrial groups

included: manufacturing, 921; logging, 2,221; farming, 394; transportation, 662; construction and maintenance, 3,149; trade, 308; and services, 3,486, of which 1,855 were of household workers. During the month 6,535 men and 901 women were placed in regular employment.

MANITOBA

Orders listed at Manitoba offices during December called for 23 per cent fewer workers than in the preceding month, but nearly 36 per cent more than in the corresponding month of 1925. Placements were 25 per cent lower than in November, but nearly 40 per cent higher than during December, 1925. All industrial groups participated in the gains in placements over the same month of 1925, those in logging and farming being the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 122; logging, 859; farming, 700; construction and maintenance, 143; trade, 205; and services, 1,570, of which 1,248 were of household workers. Placements in regular employment numbered 1,664 of men and 433 of women.

SASKATCHEWAN

Opportunities for employment as indicated by orders listed at offices in Saskatchewan during December were nearly 20 per cent less than in the preceding month, but nearly 19 per cent higher than during the corresponding month of 1925. Placements declined 29 per cent from November, but were nearly 22 per cent higher than in December, 1925. Placements were higher than in December, 1925, in all industrial groups, the gains being most marked in logging, farming and construction and maintenance. Placements by industrial divisions included: logging, 342; farming, 662; construction and maintenance, 180; trade, 133; and services, 670, of which 474 were of household workers. During the month 1,175 men and 303 women were placed in regular employment.

ALBERTA

There was a decline of over 14 per cent in the number of positions offered through the offices in Alberta during December when compared with the preceding month, but a gain of over 48 per cent in comparison with the corresponding month of 1925. Placements were nearly 15 per cent lower than in November, but nearly 53 per cent higher than in December, 1925. Farm placements were slightly lower in December, 1926, than in the same month of 1925, but all other industrial groups showed gains under this comparison, those in logging being the most pronounced. Placements by industrial divisions included: manufacturing, 172; logging, 587; farming, 370; mining, 181; construction and maintenance, 162; trade, 118; and services, 621, of which 437 were of household workers. During the month 1,458 men and 285 women were placed in regular employment.

BRITISH COLUMBIA

Employment opportunities as indicated by orders listed at offices in British Columbia during December were over one per cent better than in the preceding month and increased nearly 30 per cent over the corresponding month of 1925. There was a gain of over 2 per cent in placements in comparison with November and of nearly 28 per cent when compared with December, 1925. All industrial groups except farming and construction and maintenance participated in the placement gains over December, 1925, and in those the declines were nominal. Industrial groups in which most of the placements were effected during the month were: manufacturing, 229; logging, 333; transportation, 289; construction and maintenance, 269; trade, 202; and services, 969, of which 490 were of household workers. Regular employment was secured for 674 men and 220 women during the month.

Movement of Labour

During December, 1926, the offices of the Employment Service of Canada made 15,540 placements in regular employment of which 8,629 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,004 were granted the Employment Service reduced transportation rate, 1,188 going to points within the same province as the despatching office and 816 to other provinces. The reduced transportation rate which is 2.7 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The offices in Quebec issued 264 certificates all to bushmen, 118 going to points within the province and 146 of whom travelled from Hull to camps in the vicinity of North Bay, Cobalt and Sudbury. Provincially, the Quebec City office despatched 52 bushmen and one camp cook and the Montreal office 50 bushmen to employment within their respective zones while Hull transferred 15 bushmen to points in the Quebec zone.

The reduced rate certificates granted in Ontario numbered 440, of which 423 were provincial and 17 interprovincial. Of the latter, Pembroke issued certificates to 7 bush-

men, North Bay to 6 miners and 2 bushmen and Sudbury to 2 miners, all going to the Hull zone. Within the province Toronto despatched one instrument man to North Bay, one cook to Belleville, one timekeeper, one machinist, one steam shovel operator, 7 bricklayers and one rigger to Port Arthur, one electrician to Timmins and one line man to Ottawa. From Port Arthur one construction labourer was transferred to Toronto, from Kingston one toolmaker to Brantford, from Niagara Falls one blacksmith to Fort William, from Windsor one diemaker to Oshawa and one machinist and 2 moulders to Hamilton, from North Bay one electrician to Timmins and one hotel cook to Cobalt and from Sudbury 2 miners to the Ottawa zone. The remaining 397 were bushmen sent chiefly from Fort William, Port Arthur, North Bay and Sudbury offices to logging camps in the northern part of the province.

In Manitoba the Winnipeg office issued all the certificates for special transportation which numbered 752 and of these 122 were issued for provincial points and 630 for other provinces. The movement within the province included 94 farm hands and 7 hotel and household workers destined to the Brandon zone, 4 bushmen, 3 cooks and one farm hand to Dauphin and 12 farm labourers and one female hotel worker to points in the Winnipeg zone. Of those going outside the province the Port Arthur region received 590 bushmen, one construction foreman, one electrician, one housekeeper, one baker, 3 machinists, one blacksmith and 8 hotel and household workers and the Regina district 13 farm labourers, one farm domestic and 3 female hotel workers; in addition 4 farm labourers were despatched to the Yorkton zone, 2 farm labourers to Weyburn and one farm domestic to Prince Albert.

In Saskatchewan 290 certificates were granted, 270 provincial and 20 interprovincial. Provincially from Regina 51 bushmen went to employment around Prince Albert, 2 labourers to North Battleford, one domestic to Saskatoon, 27 bushmen, 8 farm hands and one housekeeper to Yorkton, one chambermaid to Moose Jaw, 9 labourers and one hotel cook to Estevan and 6 farm labourers and one housekeeper within the Regina zone. Saskatoon transferred 84 bushmen, one farm labourer, one housekeeper and one saw-mill engineer to Prince Albert, 38 bushmen to North Battleford and 6 farm labourers within its own zone. Moose Jaw issued transportation to one waitress, one farm labourer and one housekeeper for the Swift Current zone, 2 miners for Weyburn, one bushman for Prince Albert and one cook for the Moose Jaw zone and from Prince Albert 16 bushmen and 8 sawyers went to points within its own zone. Of those going to other provinces Dauphin received 5 bushmen, Toronto one farm labourer, Port Arthur 2 bushmen and Calgary 3 bricklayers all from Regina, Lethbridge 2 bricklayers from Moose Jaw and Dauphin 7 bushmen from Saskatoon.

Alberta offices issued transportation to 189 persons, 186 going to employment within the province. Of the remainder Calgary transferred 2 cooks, one to each of the Swift Current and Cranbrook zones and Edmonton one farm labourer to the Saskatoon zone. Within the province Edmonton despatched 4 carpenters, 2 electricians, 3 plasterers, one shingler, 7 farm labourers, one edgerman, 9 miners, 13 labourers, 2 sawyers, 6 teamsters, one bookkeeper, 5 cooks, 6 mine labourers, 2 blacksmiths, 3 engineers and 92 bushmen to points within its own zone, one cookee to Calgary and 5 labourers to Drumheller. From Calgary one carpenter and one blacksmith were despatched to Lethbridge, 2 blacksmiths and 3 farm labourers to the Edmonton zone, 2 miners and 2 farm labourers to Drumheller, one sheep herder and one choreman to Medicine Hat and 5 bushmen, 2 farm labourers and one housekeeper to points within the Calgary zone. Medicine Hat in addition issued transportation to one farm labourer and one farm domestic going to the Calgary zone.

In British Columbia 69 persons benefited by the reduced rate, all of whom went to provincial points. Of these, Vancouver sent one bricklayer to Nelson, one sawyer, 2 engineers and one blacksmith to Prince George, one flunkey, one cook and 4 miners to Penticton, one edgerman, one cook and 3 miners to Kamloops, 5 bushmen to Revelstoke and one planerman and 5 mine workers to points within the Vancouver zone. From Penticton one farm hand and from Prince George 19 bushmen were transferred to employment within their respective zones. The movement from Prince Rupert included 6 bushmen shipped to Prince George and 7 miners and 5 bushmen to points within the Prince Rupert zone. The remainder comprised one engineer and one cook travelling from Kamloops to Prince George and one handy man and one cook from Nelson to Revelstoke.

Of the 2,004 persons who benefited by the Employment Service reduced rate 1,585 were carried by the Canadian National Railways, 289 by the Canadian Pacific Railway, 126 by the Temiskaming and Northern Ontario Railway, 2 by the Pacific Great Eastern Railway, one by the Kettle Valley Railway and one by the Edmonton, Dunvegan and British Columbia Railway.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD OCTOBER TO DECEMBER 31, 1926

EMPLOYMENT conditions as indicated by the work of the offices of the Employment Service of Canada during the quarter October to December, 1926, were more favourable than during the corresponding quarter of 1925, as there was shown an increase of over 9 per cent both in the vacancies offered and in the placements effected in regular and

casual employment. All industries recorded gains in both instances, the most noteworthy being in logging, farming, transportation, construction and maintenance, and services. Increased vacancies and placements were also recorded in all provinces except Quebec, where there was only a very slight reduction in the vacancies offered. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period October to December 31, 1926.

From the chart on page 205 which accompanies the article on the work of the employment offices for the month of December, it will be noted that the trend of the curves representing the ratio of vacancies and of placements to applications showed a sharp decline during October, November, and the first half of December, but during the latter half of December again showed a marked upward trend. Throughout the three months, however, the curve both of vacancies and of placements was on a considerably higher level than that recorded during the corresponding quarter of 1925, the level of vacancies to applications at the close of 1926 standing about 10 points higher than that shown in December, 1925, while that of placements also showed a rise of 5 points. During the period October to December, 1926, there was a ratio of 76.9 vacancies and 71.9 placements for each 100 applications for employment as compared with 73.8 vacancies and 69.3 placements during the corresponding period of 1925. The average number of applicants registered daily during the quarter under review was 1,689; of positions offered, 1,299; and of placements effected, 1,214; in contrast with a daily average of 1,607 applications, 1,185 vacancies and 1,113 placements in regular and casual employment during the last quarter of 1925.

During the three months October to December, 1926, the offices reported that they had made 97,478 references to positions and had effected a total of 93,458 placements, of which 64,240 were in regular employment and 29,218 in casual work. Of the placements in regular employment 54,726 were of men and 9,514 of women, while casual work was found for 16,521 men and 12,697 women. Comparison with the same period in 1925 shows that 85,698 placements were then made, of which 59,674 were in regular employment and 26,024 in casual work. Applications for employment during the period under review were received from 99,046 men and 30,954 women, a total of 130,000, in contrast with a registration of 123,682 persons during the same period of 1925. Employers notified the Service during October to December, 1926, of 99,958 vacancies, of which 74,096 were for men and 25,862 for women as compared with 91,238 opportunities for work during the corresponding period of 1925.

In another section of this issue will be found a report in detail of the transactions of the Employment Service for the month of December, 1926.

BUILDING PERMITS ISSUED IN CANADA IN DECEMBER, 1926

THE value of the building permits issued by 63 cities in December, 1926, was the highest for that month since this record was begun in 1920, there being authorizations valued at $11,472,131. This was an increase of 15.1 per cent over the November total of $9,968,937 and of 55.8 per cent as compared with the aggregate of $7,363,777 in December, 1925.

Detailed statements were received from some fifty cities, showing that they had issued over 500 permits for dwellings valued at almost $3,300,000 and nearly 900 permits for other buildings at an estimated cost of approximately $7,000,000. During November, the construction was authorized of over 1,000 dwellings and 2,000 other buildings, estimated to cost nearly $5,300,000 and $4,200,000, respectively.

As compared with the preceding month, Quebec registered an increase of $4,054,818 or 134.7 per cent in the value of the building permits issued. Of the declines in the remaining provinces, those of $2,096,930 or 39.1 per cent in Ontario and $172,990 or 84.3 per cent in Manitoba were the largest.

As compared with December, 1925, Quebec, Alberta and British Columbia recorded increases in the value of building authorized, Quebec again showing the most marked gain of $4,882,070 or 223.6 per cent. The other provinces reported reductions in the value of building authorized, that in Ontario of $910,650, or 21.8 per cent, being the largest.

Montreal registered an important increase in the building permits issued; the December total was the greatest registered in any month of 1926 and was also larger than in December of any other year since 1910. Toronto, Winnipeg and Vancouver reported declines as compared with the preceding month and also as compared with the same month in 1925. Ottawa, Windsor, Kamloops, New Westminster and Prince Rupert recorded increases in both comparisons.

Cumulative Record for 1926.—The following table gives the values of the building authorized by 63 cities during the month of December, 1926, and also in the twelve months of each year since 1920; the 1926 figures are unrevised, while for the preceding years the statistics are revised. The average index numbers of wholesale prices of building materials for those years are also given (1913=100).

Year	Value of Permits Issued		Average Indexes of Wholesale prices of building materials
	In December	In Twelve months	
	$	$	
1926	11,472,131	156,303,912	149·2
1925	7,363,777	125,029,367	153·7
1924	6,463,319	126,583,148	159·1
1923	6,974,256	133,521,621	166·8
1922	9,517,402	148,215,407	162·2
1921	5,537,330	116,794,414	183·2
1920	4,844,354	117,019,622	214·9

The December total for the 63 cities was the highest in the record, as shown above, while for the 35 cities it was higher than in any other year of the record, except 1912, when the total was $12,450,215.

Unrevised statistics for 1926 show that the last year's aggregate was greater than in any other of the six preceding years, exceeding the previous high level in 1922 by 5.5 per cent. The twelve months' total for the 35 cities was exceeded only three times, in 1911, 1912 and 1913, since the record was begun in 1910.

Mr. Herbert C. Cox, in his presidential address at the annual meeting of the Canada Life Assurance Company at Toronto in January, commented on the marked increase in the volume of group insurance during the past year. "While the individual," he said, "is indulging in the purchase of life insurance to a greater extent than ever before, there has also been a vary marked increase in the more recently developed plan of group coverage by which the employer provides protection for those in his service. This has an important bearing upon all the relations between employer and employeee, and has already had a pronounced effect in reducing the turnover of labour, which is always costly and disturbing. Its best recommendation is its adoption by the greatest industrial and financial corporations of the continent."

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages, and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Mining, Non-ferrous Smelting and Quarrying: Coal Mining

CASSIDY, VANCOUVER ISLAND, B.C.—GRANBY CONSOLIDATED MINING, SMELTING AND POWER COMPANY, LIMITED, AND ITS EMPLOYEES.

Agreement effective June 1, 1925, to May 31, 1927. Parties to meet in conference thirty days prior to expiration of the agreement to discuss renewal.

The right to hire and discharge, the management of the mine, and direction of working forces are vested exclusively in the company.

In case of grievances or disputes arising, same are to be submitted to the employees' committee, but only after persons affected have endeavoured to settle matter with the overman or foreman. In case of failure to agree the committee shall present grievance to the resident manager, or later to the general manager. In the meantime, work shall continue. Before any stoppage of work, matter shall be submitted to a secret ballot.

The employees' committee shall not exceed five underground and surface men, who must have been employed at the colliery for at least 12 months. Vacancy on committee to be filled by pithead ballot. Committee in discharge of duties shall not go around the mine and property without first making arrangements with the management. Committee shall meet the management once a month to discuss work and welfare conditions.

Company is to deduct from employees to defray expenses of committee such amounts as ordered by the individual employees, with a specified sum as limit.

Employees connected with the management of the mine shall not come under the agreement.

An employee absent from work for two days except through sickness, or after arrangement, may be discharged.

Employees causing stoppage of work in violation of the agreement shall be subject to discharge.

When a miner's working place becomes deficient owing to abnormal conditions, preventing him from earning $4.50 plus bonus, per shift, company shall pay him a sufficient amount to secure the minimum, if he has done a fair day's work.

A miner taken from the face to do day work shall receive miner's day rate, but when there is not work at the face, and miner elects to do day work, he shall be paid regular day work wage for the class of work.

No work shall be done on holidays.

In case of suspension of mining, maintenance men shall not suspend work, but shall protect the property.

Miners shall be supplied with sufficient cars.

A bonus of 64 cents per day shall be paid, any increase or decrease in the bonus or base wages being governed by competitive conditions.

Scale of wages: On surface, hours eight per day, wages, per day—Engineers, power house, first class, $5.53; second class, $5.03; third class, $4.50. Wipers, $3.85, firemen, $4; ashmen, $3.25; hoisting engineers, main hoist, $5.14; fan men, $3.25; blacksmith, $4.95; tool sharpener, $4.60; blacksmith helper, $3.85; carpenters, $4.95; car repairer, $4.50; machinist, first class, $5.13; second class, $4.95; fitter, $4.50; machinist helper, $3.85; labourer (shop), $3.25; boys (apprentice), according to ability; plumber, $4.50; plumber helper, $3.85; electrician, $4.66; electrician's helper, $3.85; lineman, $4.60; truck driver, $4.14; teamster, $3.78; labourers, $3.25.

Preparation and loading: Hours, eight per day; carhaul feeder, $3.25; dumpers, $3.60; slate picker foreman, $3.75; slate pickers (men), conveyor man, car handler (railway), car trimmers, $3.25; tipple engineer, $4.50; washery men, $3.25 to $4.05; lampman (head), $3.80; lampman (assistant), $3.25. Boys, in any of above positions or in any other surface positions, from $1 to $2.60. Outside labour, not classified, $3.25.

Wages per day, underground, miners $4.50; miners (wet places) $5; rock miners, $5.04; timbermen, $4.50; timbermen helpers, $3.85; track layers, $4.50; track layers helpers, $3.85; bratticemen (first class), $4.50; second class, $4.25; bratticemen helpers, $3.85; pipemen, $4.25; pipeman helper, $3.85; motormen, $4; switch boys, $2.80; door boys, $2.10; rope riders (main rope) $4.01; rope riders, pushers, $3.85; pumpmen, $4; winch drivers (men), $3.85; boys, $3.35; roadmen, and underground labour not classified, $3.85.

The agreement also specifies regarding contract rates and conditions, penalties for loading impurities, dockage, cross shift partners, charges for supplies, employees' coal supply, and use of wash-house and lockers.

The execution of this agreement shall not preclude discussion or negotiation with reference to reduction of bonus similar to that in effect and pending at some mines on the Island.

Employees are to sign agreements before accepting employment.

If Company cease operations and suspend contract, Company shall be under no obligation to find employment for workers.

Canmore, Alberta—The Canmore Coal Company, Limited and The Canmore Miners' Union.

Agreement to be in effect from May 11, 1926, until May 11, 1928.

The management has the right to hire and discharge and direct working forces.

All men in and around the mine may become members of the Union and agree to sign the check-off for dues and assessments, in which case the Company will collect the monies so checked off and forward amount to the union secretary. The amount will be limited to $2.50 per member per pay period.

The agreement provides for a settlement of disputes by a pit committee and the management.

There shall be a pit committee of three in each colliery or plant, selected by the employees from their number; one member may be a checkweighman or an officer of the union, previously elected. The committee shall settle disputes.

Price of new work shall be taken up under "settlement of disputes." If work is continued until a price has been arranged men shall be paid on day wage scale.

The agreement provides 20 per cent extra for Sunday work done by repairmen, while overtime and work on Sundays and holidays is to be eliminated as far as practicable. There are provisions regarding tools, moving track, and dockage.

Day Wage Scale—inside—Rock miner, $5.85; driver spike team, miner, shotlighter, bratticemen, timberman, tracklayer, main and tail rope rider, $5.40; timber handler, $5.10; hoistman, motorman, driver, rope rider, $5.05; locomotive engineer, $4.90; bratticeman's helper, timberman's helper, tracklayer's helper, motorman's helper, pipefitter's helper, locomotive switchman, cagers (slope and incline), pumpman, all other labour unclassified, $4.65; boys to 18 years, $3.50.

Day Wage Scale—outside—Power house engineer, tail rope engineer, $5.70; hoisting engineer, locomotive engineer, $5.55; blacksmith, carpenter, $5.50; machinist, $5.15–$5.50; fireman, $5.40; head locomotive switchman, $5.35; box car loader engineer, car repairer, $5.15; locomotive switchman, locomotive fireman, $4.90; blacksmith's helper, carpenter's helper, car repairer's helper, machinist's helper, tipple dumper, breaker picker boss, $4.80; teamster, $4.75; lampman, $4.50, stablemen, all other labour unclassified, $4.45; boys to 18 years, $3.

The agreement also provides for contract rates.

Manufacturing: Printing and Publishing

Halifax, N.S.—Certain Local Newspaper Publishers and Halifax Typographical Union, No. 130.

Agreement to be in effect from May 1, 1926, until May 1, 1927, and thereafter until 30 days' notice of change is given.

Only union workmen are to be employed. The union shall endeavour to furnish men capable of performing the work required, or if unable, any able help may be employed, and shall join the union.

Minimum wage, per week—Operators, machinists and handmen, day, $32; night, $35. Machinist, operators, $2 above this scale.

Hours, eight per day or night, for six days. Overtime, time and one-half. All work in news offices is to be time work except in offices working piece work at the beginning of this agreement. Work on Sundays and three holidays, double time, provided this shall not apply to morning papers published every week day.

One apprentice to three journeymen, and one for each additional three. Not more than four to an office. At least one member of the union, aside from the proprietor, shall be regularly employed in composing room before the office is entitled to an apprentice. In case of firm publishing a morning and an evening edition, this applies to each.

An apprentice shall be examined at end of six months, and if good reason exists, apprenticeship shall be terminated, otherwise continuing for five years. Minimum wages, third year, one quarter of journeymen's wage; fourth year, two-fifths; fifth year, two-thirds.

A standing committee of two from each party shall be appointed, to decide questions about scale of pieces and interpretation of the agreement. If no decision is reached, matter shall be referred to a Board of Arbitration, the representatives of each party to select one arbitrator and the two to agree upon a third. Decision to be binding.

Halifax, N.S.—Certain Local Book and Job Offices and The Halifax Typographical Union, No. 130.

Agreement to be in effect from May 1, 1926, until May 1, 1927, with three months' notice of change.

Only union members to be employed. The union shall endeavour to furnish men capable of performing the work required; if unable, any able help may be employed by the firm, and shall join the union.

Workrooms to be sanitary; no obstacles to be placed in way of employees joining the union.

Wages per week—Operators, machinists and handmen, day, $30; night, $35. Machinist operators, $2 above scale. Foreman, $3 per week above scale for handmen.

Hours, eight per day (except Saturday); 44 per week. Hours, day work, between 7 a.m. and 6 p.m., and on Saturdays between 7 a.m. and 1 p.m.; night, between 7 p.m. and 6 a.m.

Apprenticeship regulations are the same as in the case of news offices, with the exception of a clause applying only to newspaper work, with an added clause providing that apprentices shall complete the International Typographical Union course of lessons in printing, beginning in their third year.

The Arbitration clause is the same as in the newspaper agreement.

Transportation and Public Utilities: Electric Railways

Montreal, Quebec—Montreal and Southern Counties Railway Company—Transportation Department.

Schedule governing working conditions and rates of pay of trainmen. Schedule in effect September 1, 1926, until September 1, 1929. This schedule is in accordance with the recommendations of the Board appointed last year under the Industrial Disputes Investigation Act (Labour Gazette, July 1926, page 643; December, 1926, page 1188).

Trainmen to mean any conductor, motorman, baggageman or brakeman.

Trainmen required by the Company to attend court will be reimbursed for time lost and for expenses.

Trainmen not to lose seniority rights on account of illness.

In reduction of staff, seniority and proficiency shall govern. Trainmen laid off shall be given preference of reemployment when staff is increased, if available, and if unemployed within six months shall be allowed credit for length of time previously worked.

Trainmen may leave or be required to leave service on a day's notice, and must return equipment, etc., before being paid.

Trainmen leaving after three years' service may have a service letter showing length and kind of service rendered.

Trainmen will not be disciplined or dismissed (except for intoxication) except after investigation. They may be laid off for investigation and if not guilty will resume duty with pay for time lost. If not satisfied with decision they may appeal to the Superintendent, and then up to the highest officer designated by the Company.

Promotion and seniority will be confined to the Transportation Department in the following groups—Motormen, conductors, milk messenger, trainman. Trainmen will be in line of promotion for car starters, inspectors and dispatchers. Senior employees among trainmen shall have precedence of promotion if faithful and qualified.

Trainmen may file applications for bulletined positions. To be eligible for interurban work, trainmen must work six months on suburban division, pass examination for "A" book, and equip themselves with a standard watch.

Trainmen after six months must take examination on standard rules. Failing to pass, they must try again within 60 days, and if they fail they will not be retained. Trainmen assigned to perform other work, and not having had opportunity to write examination, will not lose their seniority.

Trainmen who have resigned and have been reengaged shall lose seniority.

Trainmen temporarily assigned to higher positions (paid on monthly basis) shall receive higher rates, but in lower positions rates shall not be reduced. This not to apply to relief for vacations or regular relief.

Provision is made for uniforms and for application and assignment of runs.

Rates of pay, per hour—Passenger, baggage, express and work service, conductors and motormen, 1st year, 45 cents; 2nd year, 49 cents; 3rd year, 50 cents; 4th year, 52 cents. Freight and snow plough service, conductors and motormen, 1st year, 50 cents; 2nd year, 52 cents, 3rd year 54 cents; 4th year, 55 cents; assistant motorman and brakeman—1st year, 46 cents; 2nd year, 47 cents; 3rd year, 50 cents; 4th year, 51 cents; 2nd brakeman, 45 cents.

Trainmen called out except for regular runs, minimum wage of 2½ hours; additional work to be paid actual time.

Only recognized qualified trainmen are to be employed on operation.

When necessary, meals will be provided by the Company.

Trainmen away from home will be provided with places to sleep, cook and eat their meals.

If spare men are available, regular trainmen will not be assigned extra work.

Provision is made for lapsed time and for booking of regular extras and spare work.

Leave of absence will be granted for committee work not interfering with the service. Free transportation will be granted for this over the Company's lines.

Transportation and Public Utilities: Steam Railways

Three agreements, covering shop crafts, maintenance of way employees and shop labourers, are summarized in the next article. The agreement involving conductors, brakemen, etc., was outlined in the January issue of the LABOUR GAZETTE, page 28.

Service: Public Administration

NEW WESTMINSTER, B.C.: For agreement for fire fighters see page 140.

AGREEMENTS AS TO CHANGES IN WAGES AND WORKING CONDITIONS BETWEEN RAILWAYS IN CANADA AND CERTAIN CLASSES OF EMPLOYEES

REFERENCE was made in the January issue of the LABOUR GAZETTE to the settlement of a dispute between conductors, brakemen, baggage men, and yardmen and the principal railways in Canada, increases of approximately 6 per cent being agreed to and the agreements in force since 1921 being amended accordingly. Early in January negotiations between the railways and shop men which began in May 1926 were resumed and a settlement was made providing for increases of 4 cents per hour for mechanics receiving 70 cents per hour and 63 cents per hour, and for helpers and other classes, while rates for apprentices were raised by 2 cents per hour, to be in effect from January 1, 1927.

The agreement between the Railway Association of Canada representing the two principal railways in Canada and various associated and other railways, and the Railway Employees Department, Division No. 4, American Federation of Labour, representing employees in the Locomotive and Car Departments of the several railways, in respect to rates of pay, work hours and conditions of service, (namely Wage Agreement No. 6, December 1, 1922, as amended by Supplement A thereto, effective December 31, 1923) was amended to provide for the above changes in wages and amendments were made to various rules, chiefly with reference to work on Sundays and holidays for certain classes, special work, filling of vacancies, promotion, leave of absence, seniority, apprentices, and to special rules for certain classes.

Negotiations were also carried on between the railways and the maintenance of the way employees and increases of two cents per hour and upward were agreed to. The agreement between the Railway Association and the Brotherhood of Maintenance of Way Employees (from 1918 to 1925 the United Brotherhood of Maintenance of Way Employees and Railroad Shop Labourers) namely Wage Agreement No. 7, dated November 30, 1922, amended by Supplement A, December 1, 1923, was amended to provide for the increases agreed to namely:—section foremen from $4.40-480 per day to $4.55-5.00 per day; assistant section foreman in yards, from $4.40 per day to $4.55 per day; foremen of extra gangs from $4.70-5.50 to $5.10-5.60 per day; assistant foremen of extra gangs from a minimum of $4.40 to a minimum of $4.55; snow plow or flanger foremen from $5.40 to $5.55 per day; sectionmen in classified yards from 38 cents per hour to 41 cents; all other sectionmen during first year from 36 cents to 38 cents; all other sectionmen after one year from 38 cents to 40 cents. Wages for mechanics on bridge and building work were increased by 2 cents per hour, pile drivers and hoist engineers by 15 cents per day, foremen by 25 cents and 30 cents per day, labourers at terminals west of Port Arthur and Superior Junction from 37 cents per hour to 40 cents.

The section of Wage Agreement No. 7, with reference to shop labourers stipulated that it applied only to shop labourers not otherwise provided for in other wage agreements and the Canadian Pacific Railway entered into an agreement with a committee of the maintenance of way employees and shop labourers providing for substantially the same working conditions as in Wage Agreement No. 7 but providing for increases in pay of 2 cents per hour, effective from January 16, 1927.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts contain the general fair wages clause, which is as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system and the securing of the wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council is as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for

the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; or, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portion of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting other than such as may be customary in the trades concerned is prohibited unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main Contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

DEPARTMENT OF RAILWAYS AND CANALS

Manufacture, delivery and erection of the entire superstructure, including the approach spans, of the Double Leaf Rolling Lift Bascule Bridge at the Queenston Road over the Welland Ship Canal, known as Bridge No. 4. Name of contractor, the Hamilton Bridge Works Company Limited, of the city of Hamilton, county of Wentworth, Ont. Date of contract, December 31, 1926. Amount of contract, schedule rates.

Concrete substructure, the steel framework and the concrete smoke ducts of a train shed, in the city of Saint John, New Brunswick, as per plans and specifications thereto affixed. Name of contractor, Standard Construction Company Limited, of the city of Halifax, Nova Scotia. Date of contract, January 10, 1927. Amount of contract, schedule rates.

POST OFFICE DEPARTMENT

The following is a statement of payments made in January, 1927, for supplies ordered by the Post Office Department, under contracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
	$ cts.
Making metal dating stamps and type, also other hand stamps and brass crown seals	$ 794 15
Making and repairing rubber stamps, daters, etc.	137 44
Making up and supplying letter carriers' uniforms, etc.	12,970 04
Stamping pads, ink, etc.	326 89
Bag fittings	1,028 15
Cotton Duck for mail bags	443 72
Scales	519 80
Letter Carriers' Satchels	380 25

A new schedule under the Boilers' Act of Alberta fixes the fees for engineers' and firemen's certificates as follows: for engineers' first and second-class certificates, $10; for engineers' third-class, final traction and provisional certificates and for firemen's final certificate, $5; for a permit, $7.50; for engineers' annual re-registration, $1.

A contributory pension scheme for the police department is under consideration of the authorities at Saskatoon, Saskatchewan. The pensions would follow a plan similar to that for the city firemen, described in the LABOUR GAZETTE, May, 1924 (page 392).

PRICES, RETAIL AND WHOLESALE, IN CANADA, JANUARY, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight, the weekly family budget in terms of retail prices being somewhat higher, due chiefly to seasonal changes, while the Dominion Bureau of Statistics index number of wholesale prices was practically unchanged.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.37 for January, as compared with $11.18 for December, 1926; $11.63 for January, 1926; $10.77 for January, 1925; $10.78 for January, 1924; $10.52 for January, 1923; $11.03 for January, 1922; $14.48 for January, 1921; $16.92 for June, 1920 (the peak); $15.30 for January, 1920; $12.42 for January, 1918; and $7.73 for January, 1914. The prices of butter showed a substantial seasonal advance, while less important advances, also mainly seasonal, occurred in the prices of eggs, milk, cheese, beef, fresh and salt pork, rolled oats, evaporated apples and sugar. Prices of bacon, lard, and prunes were slightly lower. Including the cost of fuel and rent with that of foods the total budget averaged $21.59 at the beginning of January, as compared with $21.41 for December, 1926; $21.96 for January, 1926; $21.09 for January, 1925; $21.23 for January, 1924; $21.13 for January, 1923; $21.52 for January, 1922; $25.30 for January, 1921; $26.92 for July, 1920 (the peak); $24.15 for January, 1920; $19.80 for January, 1918; and $14.49 for January, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was practically unchanged at 150.6 for January, as compared with 150.5 for December, 1926; 163.8 for January, 1926; 165.5 for January, 1925; 156.9 for January, 1924; 151.4 for January, 1923; 151.7 for January, 1922; 200.6 for January, 1921; 256.7 for May, 1920 (the peak); 233.4 for January, 1920; 206.1 for January, 1919; and 191.7 for January, 1918. Forty prices quotations were higher, forty-three were lower and one hundred and fifty-three were unchanged.

In the grouping according to chief component materials three of the eight main groups advanced, while five were lower. Higher prices for grains, flour and milled products caused an advance in the vegetables and their products group. The animals and their products group was higher, because of increases in the prices of live stock, butter and milk, which more than offset declines in the prices of eggs and furs. The fibres, textiles and textile products group also advanced, due to higher prices for raw cotton and manila rope, which more than offset the lower prices for silk and wool. The groups which declined were: the iron and its products, mainly because of declines in the prices of steel sheets and wire; the non-ferrous metals, due to decreased prices for copper, lead, tin and antimony, which more than offset advances in the prices of silver and spelter; the chemicals and allied products, due to declines in the prices of sulphuric acid and glycerine; the wood, wood products and paper, and the non-metallic minerals and their products.

In the grouping according to purpose, consumers' goods were practically unchanged, while producers' goods were slightly higher. In the former group higher prices for flour and other milled products, milk, butter and cheese were offset by declines in the prices of potatoes, eggs, sugar and tea. In producers' goods, materials for the textile and clothing industries, for the leather industry, for the meat packing industries, and for the milling industries advanced, while prices of materials for the fur industry, for the metal working industries, for the chemical using industries, as well as miscellaneous producers' materials, declined.

In the grouping according to origin, raw or partly manufactured goods advanced slightly, lower prices for potatoes, sugar, tea, wool, silk and non-ferrous metals being more than offset by higher prices for grains, live stock, milk, eggs, cotton and jute. Fully or chiefly manufactured goods also advanced slightly, due mainly to higher prices for flour, butter and cheese. Domestic farm products were slightly higher, while articles of marine origin, of forest origin, and of mineral origin were slightly lower.

Professor Michell's index number of forty articles, with prices during 1900 to 1909 as 100, was slightly higher for January at 170.8, as compared with 170.1 for December, 1926; 181.3 for January, 1926; 265.1 for January, 1920; and 117.3 for January, 1914. The index of twenty foodstuffs declined from 188.1 for December, 1926, to 187.7 for January; that for manufacturers' goods, however, advanced from 152.1 for December, 1926, to 153.4 for January.

34583—7

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of January of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget of the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

INDEX NUMBER OF CHANGES IN THE COST OF LIVING

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using

the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 has been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE for January on Prices in Canada and in Other Countries, page 9, and the table is reproduced here with figures for January, 1927, added. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light group, gas and electricity have been included.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1926*

(Average prices in 1913=100)

—	Food	Fuel and Light	Rent	Clothing	Sundries	All Items*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and 1925, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Prices of beef, which had averaged lower each month from July to December, 1926, were somewhat higher in January, 1927, sirloin steak averaging 28.7 cents per pound, as compared with 28.4 cents in December; round steak 23.4 cents in January and 23.2 cents in December; shoulder roast 15.9 cents in January and 15.6 cents in December; and stewing beef 12.3 cents in January and 12.1 cents in December. Veal and mutton showed little change. Both fresh and salt pork were slightly higher, fresh averaging 28.8 cents per pound and salt averaging 27.4 cents per pound. Bacon declined from an average of 42.6 cents per pound in December to 41.8 cents in January, declines in some localities being more than offset by advances in others. Ham showed little change, averaging 63.1 cents per pound. In fresh fish, halibut and age of 23.6 cents per pound in December to whitefish averaged slightly higher. Lard continued to decline, being down from an aver-

34583—7½

23.2 cents in January. Somewhat lower prices were reported from most localities.

The seasonal advance in the price of eggs continued, fresh averaging 66.5 cents per dozen in January, as compared with 64.9 cents in December, and 56.1 cents in November; and cooking averaging 52.7 cents per dozen in January, 50.8 cents in December, and 48.2 cents in November. Higher prices for milk were reported from Montreal, Hull, Ottawa, Kitchener, London, Brandon and Prince Albert. Prices of butter were substantially higher, increases being reported from practically all localities. Dairy butter was up from an average of 39.5 cents per pound in December to 43 cents in January, and creamery from 43.2 cents per pound in December to 47.9 cents in January. Cheese was slightly higher, averaging 30.5 cents per pound.

No changes were reported in the prices of bread. Soda biscuits advanced from an average of 18.3 cents per pound in December to 18.6 cents in January. Flour was unchanged in the average, slightly higher prices in some localities being offset by declines in others. Canned vegetables showed little change. Onions were up from an average of 4.7 cents per pound in December to 4.9 cents in January. Potatoes were practically unchanged at an average price of $2.04 per ninety pounds. Evaporated apples averaged slightly higher at 20.2 cents per pound, while prunes declined somewhat at an average of 15.4 cents per pound. Raisins and currants showed little change. Sugar showed a general advance, granulated averaging 8.4 cents per pound in January, as compared with 8.1 cents in December and 7.9 cents during the remainder of 1926; and yellow averaging 7.9 cents per pound in January, 7.7 cents in December, 1926, and 7.5 cents during the remainder of the year. Coffee rose from an average price of 61.1 cents per pound in December to 61.5 cents in January. Somewhat higher prices were reported from nearly all localities. Anthracite coal was practically unchanged in the average at $16.85 per ton. Bituminous coal was down from an average of $10.46 per ton in December to $10.33 in January. Lower prices were reported from Kingston, Windsor, Sarnia, Vancouver and Prince Rupert. Coke was slightly lower in the average at $11.38 per ton. No changes were reported in rent.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices, for the most part, moved to higher levels during January, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging $1.36¼ per bushel, as compared with $1.33½ in December. The low price during the month was $1.32¾ per bushel reached on the 8th and the high $1.40¼ on the 24th. The report that the Argentine government would seek to stabilize prices by buying a large quantity of wheat was said to be the reason for the higher prices. Coarse grains in general followed the movement in wheat. Western barley rose from 63½ cents per bushel to 67¾ cents; western oats from 56 cents per bushel to 58¾ cents; Ontario oats from 51½ cents per bushel to 56 cents; and rye from 91½ cents per bushel to 95¼ cents.

Flour was slightly higher, in sympathy with the higher prices for wheat, advancing at Toronto from $7.93 per barrel to $7.95¾. Rolled oats rose from $3.35 per ninety-pound sack to $3.45. Shorts at Toronto advanced from $33.05 per ton to $34.25. Raw sugar declined from $4.71 per hundred to $4.55, and granulated from $6.51 per hundred to $6.41. Potatoes at Montreal were $1.45 per bag, as compared with $1.47 in December. At Toronto the price fell from $1.74 per bag to $1.57½. Rubber again declined, Ceylon falling from 38 cents per pound to 37½ cents. Baled hay advanced from $17 per ton to $17.50, while straw was lower at $10.16 per ton. Western cattle at Winnipeg advanced from $6.05 per hundred pounds to $6.69, and choice steers at Toronto from $6.66 per hundred pounds to $7.21. Hogs at Toronto advanced from $11.19 per hundred pounds to $11.62, and choice sheep from $6.40 per hundred pounds to $6.62½. The producers' price of milk at Montreal advanced from 25 cents per gallon to 29 cents. Finest creamery butter at Montreal rose from 42 cents per pound to 43 cents, and creamery prints at Toronto from 43 cents per pound to 47 cents. Cheese advanced 1 cent per pound to 26 cents. Fresh eggs declined from 68-70 cents per dozen to 60-63 cents, while storage eggs were higher, due, it was said, to the duty recently imposed upon foreign supplies, the price at Toronto rising from 42 cents per dozen to 46-48 cents. Raw cotton at New York advanced from 12¾ cents per pound to 13½ cents. Raw silk fell from an average of $5.85 per pound to $5.60, and wool from 27 cents per pound to 25-26 cents. Manila rope advanced 1 cent per pound to 27 cents. Non-ferrous metals were mostly lower, electrolytic copper being down from $15.45 per cwt. to $14.95; copper sheets from 21¼ cents per pound to 20¾ cents; lead from $7.80 per cwt. to $7.65; and tin from 67¾ cents per pound to 67½ cents. Silver and zinc advanced, the former from 53¾ cents per ounce to 55⅛ cents and the latter from $8.60 per cwt. to $9. Lime was down from $7.50 per ton to $7. Sulphuric acid declined from $2.25 per cwt. to $2. Glycerine was also lower at 28 cents per pound.

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA*

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movement of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. Prices in Great Britain and the United States and in various countries of Europe showed a downward tendency at the end of the year. This was due in a large measure to a decline in prices of fuel following the settlement of the British strike.

Great Britain

WHOLESALE PRICES.—The *Economist* index number, on the base 1901-05=100, was 180.7 in December, 1926, a decline of about 5 per cent for the month. There was a slight increase in "other foods" and declines in cereals and meat, textiles and the miscellaneous group (rubber, timber, oils). The outstanding variation was a decline of about 20 per cent in minerals, which brought the level of the group almost down to that of July.

The *Times* index number, on the base 1913 =100, was 142.1 for December, showing a decline of 7.1 per cent for the month. While all groups except "other food" showed declines, the low level was largely due to the drop in coal prices, for the group "other metals and minerals" declined 23.0 per cent. Cereals declined 3.5 per cent; meat and fish, 10.1 per cent; iron and steel, 6.3 per cent; cotton, 3.5 per cent; other textiles, 0.1 per cent, and other materials 3.3 per cent.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914= 100, was 175 in January a decline of 4 points or 2.2 per cent. The chief change for the month was a decline in the fuel and light group of 14.0 per cent, to reach 215. Foods declined one point, rent rose one point and clothing and sundries showed no change. The index number at February 1 was 172, foods, clothing and fuel and light all showing declines.

Austria

COST OF LIVING.—The official index number of cost of living in Vienna, on the base July, 1914=1, was 15,113 in January, as against 15,043 in December. Foods rose about 7 per cent, with increases shown in bread, rye flour, loaf sugar, and veal. In the fuel and light group, a slight increase was shown, caused by a higher price for coal. Other groups showed no change.

France

WHOLESALE PRICES.—The index number of the *Statistique Générale*, on the base 100 in 1914, was 641 at the end of December, as against 698 at the end of November. When the recent rise of about 50 per cent in the franc is taken into consideration it is seen that the level of prices is very high. The index numbers of native French and imported products, which were 733 to 1,074 at the end of July and practically the same at the end of November, were 648 to 628 at the end of December, making native products so high as to handicap French goods in foreign markets and enabling foreign producers to undersell the French manufacturers at home.

RETAIL PRICES.—The index numbers of retail prices in Paris, showing prices of 13 articles, July 1914=100, was 599 in December, the same as in November.

Germany

WHOLESALE PRICES.—The official statistical office has reconstructed its wholesale prices index number, making it more elaborate and including manufactured goods, the base remaining as before, 100 in 1913. The groups contained in the new index are as follows: agricultural products (four groups); colonial products; industrial raw materials and semi-manufactured goods, (eleven groups); manufactured goods (producers' goods, consumers' goods). The index number of all commodities declined from 137.2 on December 21 to 135.7 on January 12. Agricultural products declined from 144.3 to 139.4; colonial products rose from 127.3 to 129.5; industrial raw materials and semi-manufactured goods rose from 128.5 to 129.0, and manufactured goods fell from 142.0 to 141.6.

COST OF LIVING.—The official index number of the cost of living, on the base 1913-14= 100, was 144.3 in December as against 143.6 in November. Foods rose 0.9 per cent with slight increases shown by bread, flour, groceries, milk and milk products. Potatoes and eggs rose more slowly than they had done previously. Vegetable prices rose after a period of decline. The decline in meats, which had been noticed previously, ceased. Clothing declined slightly, and other groups showed no appreciable change.

Sweden

WHOLESALE PRICES.—The index number of the Department of Commerce, on the base prices in 1913=100, was 150 in December, an

advance of two points over the November level. The greatest advance was one of 20 points or 16.1 per cent in fuels and lubricating oils. Animal foods rose slightly and there were slight declines in feed and forage, iron and its products, textiles and chemical products.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1913=100, showed a decline for December of more than one-half of one per cent, reaching 147.2. Fuels declined 3.8 per cent owing to decreases for bituminous coal and coke. In all other groups except farm products and miscellaneous commodities, December prices averaged slightly below those of the month before. Farm products were slightly higher than in November, while there was no change in the general level of the miscellaneous group.

Bradstreet's index number of commodity prices (showing the cost of 106 commodities) was $12.5153 for February 1, a decrease of 2 per cent from January 1. "Seasonal and climatic conditions operated to depress some dairy products, eggs and tobacco, and a large decline in the drug list is chargeable to lower alcohol prices. Of thirteen groups of commodities, nine moved downward, while prices on four advanced. Commodity groups declining included provisions, chemicals and drugs, miscellaneous products, textiles, metals, coal and coke, building materials, fruits and naval stores. Groups advancing were oils, hides and leather, food, animals and breadstuffs."

COST OF LIVING.—The index number of the Special Commission on the Necessaries of Life, showing the changes in level of the cost of living in Massachusetts, on the base 1913=100, was 162.3 in December as against 162.1 in November. Foods rose slightly, fuel and light declined slightly, and other elements showed no change.

COMPARISON OF PURCHASING POWER OF WAGES IN TERMS OF FOOD AND RENT IN CAPITAL AND REPRESENTATIVE CITIES IN VARIOUS COUNTRIES

SINCE July, 1924, the International Labour Office has maintained the record of the comparative real wages in various countries, compiled and published by the British Ministry of Labour in the *Ministry of Labour Gazette* since 1923. Summaries of these figures were given in the LABOUR GAZETTE in August, 1923, June 1924, December, 1924, November, 1925. The accompanying table is taken from the *International Labour Review* for October, 1926.

As before, the purpose of the calculations is to show the comparative amounts of food which can be purchased in the various cities with the wages of forty-eight hours' work. For this purpose index numbers were calculated by taking 100 to represent the amount of each article of food which forty-eight hours' normal wages in each trade would purchase in London, and then finding what ratio of 100 would represent the corresponding amount for each article of food and each trade in each other city included. These ratios or "index numbers" were then averaged for each city for all trades included.

The International Labour Office has calculated the averages weighting the figures according to British standards of consumption and has produced averages weighted according to standards in various groups of countries with more or less similar standards of living.

In addition by taking an average of the results according to the six standards so adopted, a general average is produced which stands as an international average by means of which the standard of living in each city can be compared to that in London.

A calculation has also been made as to the comparative purchasing power of the wages if an allowance is made for rent payments as well as for food costs and this appears in the last column of the table of index numbers.

It is pointed out that the data used for the comparisons are not strictly comparable owing to differences in consumption in the various countries, that the wages data is for only four industries, building, metal, furniture and printing trades and that the prices data is for only eighteen items of food and that while a percentage allowance of the cost of food is made for rent no allowance is made for fuel, clothing and miscellaneous items.

INDEX NUMBERS OF COMPARATIVE REAL WAGES (OR COMPARATIVE PURCHASING POWER OF MONEY—WAGES) IN VARIOUS CITIES AT JULY 1, 1926
(London = 100).

City	Food only							Food and Rent
	Index Numbers based on quantities of each kind of food consumed in						General Average index nos. (based on food only)	General Average index nos. (with allowance for rent)
	Belgium and France	Central European Countries	Great Britain	Southern European Countries	Scandinavian Countries	Overseas Countries		
London	100	100	100	100	100	100	100	100
Amsterdam	94	93	82	89	98	89	91	91
Berlin	63	81	63	65	78	69	70	66
Brussels (*a*)	40	44	38	38	45	43	41	44
Copenhagen	99	122	103	106	132	112	112	112
Dublin	97	99	100	96	102	97	99	108
Lisbon (*b*)	38	36	32	33	34	35	35	
Lodz	37	51	36	40	51	44	43	48
Madrid	57	64	50	56	57	53	56	
Milan (*b*)	44	50	43	46	53	46	47	49
Ottawa	144	144	149	145	162	158	150	148
Philadelphia	163	150	169	169	176	176	167	167
Prague	49	53	48	51	51	49	50	54
Riga	41	56	43	43	52	47	47	50
Rome (*b*)	43	47	40	44	45	44	44	47
Stockholm (*c*)	81	87	84	82	104	92	88	86
Sydney	128	124	137	136	123	136	131	131
Tallin	37	48	37	38	47	41	41	42
Vienna	36	50	39	39	55	44	44	50
Warsaw (*d*)	42	54	37	44	51	45	46	47

(*a*) The figures for Brussels are abnormally low; this is due to the fall in the value of the franc, to which wages and prices have not yet become adjusted.
(*b*) The figures for Lisbon, Rome and Milan, are relatively low. This may be accounted for in part by the differences in the items of food consumption in these countries from those ordinarily consumed in most of the other countries included in the table. The budgets used in the comparisons do not make adequate allowance for the large consumption of vegetable foods in the southern European countries.
(*c*) No figures for metal trades available.
(*d*) Based on a weighted average wage. For other cities an unweighted average of wages has been used.

Annual Holidays for Workers and Collective Agreements

The International Labour Review, published by the International Labour Office, Geneva, has an interesting article in its December 1926 number entitled "Annual Holidays for Workers and Collective Agreement." For some years past, especially since the war, there has been a movement towards adoption of a system of compulsory holidays with pay, either for all workers or at least for very large groups of wage earners. In various countries this movement has taken definite shape in legislative measures, but this legislation does not fully represent the situation, and it is in countries where no law as to holidays exists that collective agreements are of the greatest importance.

The article is limited to an examination of the systems of holidays with pay set up by collective agreements which are at present in force in European industry. The data are derived from a study of some 500 agreements, natoinal, regional, or district, all typical in their respective spheres, and some including both manual and non-manual workers under the same regulations. It is found that in Germany, Italy, Sweden, and Norway, holidays with pay are very generally provided for by collective agreements, and in the Netherlands, Great Britain, Roumania, Denmark and Switzerland, the number of workers entitled to a paid holiday is also considerable. In Europe at present some nineteen million workers (approximately forty per cent of the whole number) are entitled to an annual holiday with pay, either by law, or under collective agreements. In the countries where such holidays are not yet general, provisions as to annual holidays are most frequently found in the collective agreements in the printing, food and clothing industries. The provisions found in collective agreements are regarded by the writer as indicating the needs of the parties affected and as likely to prove of great value in the drafting of subsequent legislation.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1926

THE number of fatal industrial accidents and such fatalities from industrial diseases as are included with fatal accidents by workmen's compensation boards, etc., recorded in the Department as occurring during the fourth quarter of 1926 was 386, there being 153 in October, 139 in November and 94 in December. In the fourth quarter of 1925, 296 fatal accidents were recorded. In this report it is the custom to record industrial accidents under the dates of the occurrence of the accidents and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the Workmen's Compensation Boards, the Board of Railway Commissioners, and certain other official sources; from certain large employers of labour; and from the correspondents of the LABOUR GAZETTE. Reports of accidents were also recorded from local newspapers.

By groups of industries the fatalities occurred as follows: agriculture, 46; logging, 41; fishing and trapping, 7; mining, non-ferrous smelting and quarrying, 49; manufacturing, 59; construction, 44; transportation and public utilities, 110; service, 21; trade, 7; finance, 2. In agriculture, with the exception of a number of accidents in October due to harvesting operations, those recorded were owing to the usual hazard of the industry. There was a seasonal increase in accidents in logging, and a seasonal decline in those in fishing and trapping. The mining accidents contain a list of ten fatilities caused by an explosion in the McGillivray mine at Coleman, Alberta, on November 23. As the explosion occurred at five o'clock in the morning, only 28 men were in the mine, and 18 escaped to the surface. While the number of accidents in the manufacturing group was large, they were distributed over the various branches of the industry, the largest number occurring in the iron and steel division. In the construction industry a seasonal decline was reflected in the falling-off of accidents at the close of the year. The number of fatalities in transportation and public utilities was large, steam railways being responsible for over 50 per cent of these. On October 28, a collision of a freight train and a working train, at Glendyne Siding, Quebec, near the New Brunswick boundary, caused the death of five labourers. On November 27, five men who were completing the installation of a steam boiler in the engine roundhouse at Doucet, Quebec, were killed, when the boiler exploded apparently owing to the safety valve having been inadvertently screwed down before the pressure was turned on. In water transportation before the close of navigation on the St. Lawrence river there were two serious disasters, one of which was the burning of the steamer *Montreal*, near Sorel, on November 18, on which occasion three of the crew lost their lives; and the other, the capsize, owing to shifting of badly loaded cargo, of the steamer *Guide*, off Godbout, Quebec, on October 15, when eleven people were drowned. Eight of these fatalities were considered to be industrial accidents, seven (members of the crew) coming in the group "water transportation," and one, an inspecting engineer of the Federal Department of Public Works, being classified under "service: public administration." In the latter group, four fire fighters at Winnipeg, were killed on December 23 by the collapse of a wall during a theatre fire.

In regard to the report on accidents during the third quarter of 1926, published in the LABOUR GAZETTE for November, 1926, two cases of duplication were found, and two accidents under "Construction, bridge and highway," tabulated on page 1166, have been deleted owing to mention elsewhere. These are "Labourer, near Rousseau, Ont., July 8," and "Labourer, Sherbrooke, Que., September 1."

Supplementary list of accidents.—The third supplementary list of accidents occurring during the year 1926 contains 15 accidents, including 2 in January, one of which resulted fatally in November, making 71; two in March (one being a case of fatal industrial disease) making 80; one in July, making 144; 4 in August, making 192; and 6 in September, making 99. This accounts for the two duplicates mentioned above.

Of these 15 accidents, three were under logging; two under metalliferous mining; two under saw and planing mills; one each under construction and steam railways; two under water transportation; three under retail trade, and one under service, public administration.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1926

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE—				
Farmer	Green Harbour, N.S.	Oct. 4		Fell from load of hay.
Harvester	Near Belisle, Sask.	" 4		Burned to death in burning barn.
Harvester	Near Belisle, Sask.	" 4		
Farmer	Binscarth, Man.	" 6	19	Caught in feeder while pitching sheaves.
Farmer	Blanchard Tp., Ont.	" 7	63	Fell from load while filling silo.
Operator of corn cutter	Near Ottawa, Ont.	" 8	26	Thrown by belt against crank of tractor.
Farmer	Deloraine, Man.	" 9	40	Caught in pulley of threshing machine.
Farmer	Nissouri Tp., Ont.	" 12	48	Returning from milk delivery; truck struck by train.
Farmer	Moon Hills, Sask.	" 13	52	Run over by tractor.
Farmer	Sedgewick, Alta.	" 15	60	Drawn into feed belt of thresher.
Farmer	North Dumfries, Ont.	" 15	64	Mangled by corn binder.
Farmer	Glenavon, Sask.	" 15	38	Drawn into threshing machine by belt.
Farmer	Pincher Creek, Alta.	" 15	60	Crushed by tractor.
Farmer	St. Nicholas, Que.	" 19		Fell from hayloft.
Harvester	Beiseker, Alta.	" 23		Automobile accident; employers arrested on charge of manslaughter.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1926—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—*Con.*				
Steam Railways—Con.				
Brakeman	Dundas, Ont.	Nov. 30	35	Hurled from a caboose which backed into wrong siding.
Brakeman	Bergen, Man.	Dec. 2	36	Injured in collision; died Dec. 4.
Brakeman	Wellington, B.C.	" 4	24	Slipped on rails; run over by engine.
Sectionman	Toronto, Ont.	" 7	60	Struck by train while walking to work.
Sectionman	Mimico, Ont.	" 11	29	Stepped from track to escape one train and was struck by another.
Sectionman	Near Nelson, B.C.	" 12	57	Struck by train in a cut, while patrolling track on a hand speeder. Misjudged time.
Brakeman	Fort Erie, Ont.	" 14	.....	Passenger train sideswiped by freight.
Yardman	Niagara Falls, Ont.	" 16	48	Knocked down by engine.
Yardman	Winnipeg, Man.	" 16	55	Fell beneath engine.
Lineman	Windsor Yards, Ont.	" 18	.....	Thrown from jigger which ran off tracks and turned over; died Dec. 19.
Signalman	Near St. Johns, Que.	" 18	49	Struck by train while at work at diamond.
Bridgeman	Alexo, Alta.	" 20	40	Motor car derailed.
Trackman	Bonheur, Ont.	" 20	34	Crushed between rock dump and railway car.
Street and Electric Railways:				
Brakeman	Welland, Ont.	Nov. 16	31	Run over by shunting engine when his foot caught in a frog; died Nov. 18.
Water Transportation:				
Longshoreman	Montreal, Que.	Oct. 4	45	Struck by backing train.
Seaman	Deep Water Bay, B.C.	" 7	41	Fell from tender; drowned.
Deckhand	Near Cedars, Que.	" 9	50	Slipped into canal while tying up ship and was drowned.
Captain	Lower St. Lawrence River, near Godbout, Que.	" 15	.....	Steamer capsized following shifting of badly loaded cargo.
Second engineer	" "	" 15	.....	
Cook	" "	" 15	.....	
First officer	" "	" 15	.....	
Sailor	" "	" 15	.....	
Sailor	" "	" 15	.....	
Fireman	" "	" 15	.....	
Lock tender	Merritton, Ont.	" 18	60	Struck by train.
Seaman	Montreal, Que.	" 26	19	Fell from stage while painting liner; drowned.
Captain of schooner	Bic, Que.	" 28	.....	When schooner foundered in storm, drowned.
Mechanic	Near Butedale, B.C.	Nov. –	.....	Tripped and fell, striking head on wheel of gas boat.
Deckhand	Fort William, Ont.	" 1	.....	Drowned, jumping from boat to dock.
Deckhand	River Bourgeois, N.S.	" 3	23	Fell into hold of steamer.
Deckhand	Cornwall, Ont.	" 12	18	Victim was being lowered by a boom to fasten line when boom broke; crushed between boat and lock gate.
Lockmaster	Welland Canal, Ont.	" 18	38	Slipped from coping into lock; drowned.
Lookout man	St. Lawrence River, near Sorel, Que.	" 18	.....	Burned to death in steamship.
Deckhand	" "	" 18	.....	
Deckhand	" "	" 18	.....	
Checker	Montreal, Que.	" 21	35	Fell off wharf in dark; drowned.
Longshoreman	Fort William, Ont.	" 22	48	While unloading steel rails was struck by load; died Nov. 25.
Cook on schooner	Albert, N.B.	" 24	57	Slipped off deck; drowned.
Longshoreman	Montreal, Que.	Dec. 2	23	Thrown from a flat car into river when stakes gave way; drowned.
Sailor	Sault Ste. Marie, Ont.	" 6	.....	Drowned through hole in ice during ice jam.
Sailor	" "	" 6	.....	
Lockmaster	Trent Valley Canal, Ont.	" 24	36	Drowned while cutting ice in dam to free stop log.
Oiler	Near Port Alberni, B.C.	" 30	.....	Fell overboard; drowned.
Local Transportation:				
Driver	Mountain Park, Alta.	Oct. 16	23	Stepped off step, falling under car.
Taxi driver	Near Sudbury, Ont.	" 30	.....	Shot; violence.
Teamster	Vancouver, B.C.	Nov. 1	35	Dump cart struck by train in fog.
Truck driver	Guelph, Ont.	" 13	46	Fell from a truck; died Jan. 21, 1927.
Taxi driver	Walkerville, Ont.	" 16	22	Fell asleep in car; asphyxiated by gas fumes.
Storage:				
Manager of grain elevator	Magrath, Alta.	Oct. 2	42	Caught in elevator shaft.
Labourer with elevator company	Port Arthur, Ont.	Nov. 8	55	Scratched hand; infection.
Grain elevator employee	Port Arthur, Ont.	Dec. 18	22	Sucked down by flow of grain; smothered.
Telegraphs and Telephones:				
Lineman	Toronto, Ont.	Oct. 1	.....	Fell from pole.
Telephone employee	Montreal, Que.	" 25	.....	Killed by falling wall, due to inferior mortar.
Telephone worker	Brantford, Ont.	Dec. 25	22	Cut hand, Dec. 25. Died of tetanus, Jan. 13, 1927.
Electricity and Gas:				
Electrician	Queenston, Ont.	Oct. 22	24	Believing lines dead, touched live switch.
Carpenter	Bonnington, B.C.	Nov. 7	53	While returning from work, his automobile was struck by engine. Died Nov. 30.
Lineman	Montreal, Que.	Dec. 16	36	While repairing wires base of ladder was struck by street car and victim thrown to ground; died Jan. 1, 1927.
Operator with gas company	Merlin, Ont.	" 28	25	While inspecting gas well was struck by cap off pipe when explosion occurred; died Dec. 31.
Lineman	Montreal, Que.	" 29	25	Slipped while working on pole; grasped live wires; electrocuted.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE FOURTH QUARTER OF 1926—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRADE—				
Retail;				
Driver with dairy company	London, Ont.	Oct. 3	.....	Thrown off waggon.
Labourer with ice company	Prescott, Ont.	" 11	.....	Struck by train.
Salesman with motor company	Windsor, Ont.	" 13	.....	Struck by street car.
Merchant	Montreal, Que.	Nov. 2	50	Waggon struck by street car; victim thrown beneath wheels and crushed.
Dairy driver	Near Brantford, Ont.	" 30	.....	Truck struck by a train.
Travelling salesman	Near Tilley, Alta.	Dec. 2	30	Hurt in train derailment; died Dec. 4.
Coal driver	Toronto, Ont.	" 30	34	Jumped off his own truck when brakes snapped, and was run over.
FINANCE—				
Bank official	Winnipeg, Man.	Oct. 1	42	Accidentally shot when placing revolver in drawer in bank.
Real estate agent	Near Halifax, N.S.	" 16	61	Inspecting flume which gave way; crushed to death.
SERVICE—				
Public Administration:				
Provincial license inspector	Cochrane, Ont.	Oct. 15	.....	Shot—violence.

Field inspector, Dept. of Agriculture	Near St. Clet, Que.	" 15	32	Motor car struck by train while men were on inspection work.
Field inspector, Dept. of Agriculture	"	" 15	28	
Assistant fishery inspector	Near Moncton, N.B.	" 20	30	Shot; violence.
Electrician	Ansonville, Ont.	" 24	.....	Electrocuted.
Electricain in municipal department	Mahone Bay, N.S.	" 27	21	Face came in contact with high tension wire; electrocuted.
Labourer in sewer	Timmins, Ont.	" 27	63	Crushed in cave-in when cribbing collapsed.
Labourer with Government department	Dryden, Ont.	Nov. 1	55	Pinned under car which had swerved into ditch.
Labourer on highway	Near Stinson, Ont.	" 1	45	Proceeding to place of employment in road foreman's car which upset.
Diver	Bathurst, N.B.	" 17	26	Drowned when boat capsized; was repairing water main.
Civic labourer	Ottawa, Ont.	" 19	55	Placing pontoon for bridge repair; swept over waterfall; drowned.
Civic labourer	"	" 19	.....	
Fire fighter (call)	Sydney, N.S.	" 28	36	Buried when blazing building collapsed.
Police constable (Dominion)	Rae, N.W.T.	Dec. 6	23	Burned to death when fire destroyed quarters.
Fire fighter	Winnipeg, Man.	" 23	.....	Crushed by collapse of wall in theatre fire.
Fire fighter	"	" 23	.....	
Fire fighter	"	" 23	.....	
Fire fighter	"	" 23	.....	
Engineer with Government department	Near Lytton, B.C.	" 29	.....	Slipped over a precipice.
Laundering, dyeing and cleaning:				
Worker, female, with laundry company	Ottawa, Ont.	Dec. 22	22	Hand caught in mangle; died Jan. 10, 1927.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1926

LOGGING—				
Logger	Menzies Bay, B.C.	Jan. 27	.....	Crushed by rolling log; died Nov. 4.
Logger	Bloedel, B.C.	Sept. 2	30	Struck by falling snag.
Choker setter	Camp 65, Vancouver Is., B.C.	Sept. 27	36	Struck by rolling log.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous mining:				
Labourer	Timmins, Ont.	Mar. 24	38	Silicosis.
Helper with diamond drill	Kimberley, B.C.	Aug. 14	36	Cut thumb; septicaemia.
MANUFACTURING—				
Saw and planing mills:				
Helper	Dollarton, B.C.	Mar. 12	51	Struck by stick caught in a belt.
Edger tailer	Penny, B.C.	July 14	21	Fell from a platform following an epileptic fit.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1926—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—				
Buildings and structures:				
Labourer	Toronto, Ont.	Aug. 30	29	Struck by derrick.
TRANSPORTATION AND PUBLIC UTILITIES:				
Steam railways:				
Locomotive fireman	Stephen, B.C.	Jan. 19	35	While throwing switch on Y, slipped and turned ankle; septicaemia; died Feb. 8.
Water transportation:				
Deckhand	Anyox, B.C.	Aug. 28	23	Fell off scow; drowned.
Longshoreman	Port Alberni, B.C.	Sept. 21	54	Struck on head by lumber slipping from load.
TRADE—				
Retail:				
Labourer	Vancouver, B.C.	Aug. 3	52	Ruptured artery while cranking truck.
Delivery boy	Vancouver, B.C.	Sept. 23	18	Riding bicycle; collided with truck.
Labourer	Napanee, Ont.	" 24	61	Fell off platform.
SERVICE—				
Public administration:				
Constable	Kamloops, B.C.	Sept. 13	29	Motorcycle collided with automobile; fatal Sept. 27.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Municipality not Liable for Damages caused by Rioting in Nova Scotia

AN insurance company brought an action against the town of Glace Bay, Nova Scotia, for alleged failure to prevent a riot which occurred on January 4, 1926. During the riot a trader in the town, who was insured with the company, sustained damage to his stock in trade and received from the company $5,936 to cover his losses. The trader had, under the conditions of his policy, assigned to the company all his rights of recovery against any party for loss or damage. Accordingly the company took action, alleging that the losses suffered by the trader were caused by the negligence of the town authorities, owing to (1) failure to enforce law and order by its police officers; (2) permitting unlawful assemblies which culminated in riot; and (3) not appointing special constables under the circumstances. It was alleged that the coal miners, then unemployed and their families in many cases destitute, held a meeting shortly before the date of the riot, at which they passed a resolution calling on the provincial government to devise some means of relieving the situation, "otherwise we shall be forced to take what we need wherever we can get it." The company claimed that such meetings and resolutions should have indicated to the town authorities that a breach of the peace was imminent, and that they should have taken adequate measures to prevent the threatened outbreak. Section 250 of the Towns' Incorporation Act (Revised Statutes of Nova Scotia, 1923, chapter 84) provides that in case of riot, tumult, etc., or of a just apprehension thereof, certain town officials *may* appoint any number of special constables to assist in preserving the peace, and it was contended by the plaintiff that the word *may* should, under the circumstances, be construed as meaning "must."

At the hearing of the case in the Nova Scotia Supreme Court the mayor and other witnesses were examined, and the court found that the mayor had been active in attempting to secure a settlement of the trouble. The company's action was dismissed, the judgment stating that "if the defendant is liable for damage done by rioters, such liability must be created by some statute; there is no liability at common law. The court declared that it was unable to find in the Towns' Incorporation Act "any language which expressly or by necessary implication imposes on the defendant liability for the damages caused by the rioters."

In regard to the conduct of the local authorities during the crisis the judge said: "I desire to add, in case a finding of fact should be deemed of importance, that I do not discover in the conduct of the mayor and town authorities, or of the police, any misconduct or neglect of duty. They seem to have acted, in a situation of much difficulty, with prudence and caution. Even if the police officers had failed to perform their duty—which I do not find—it does not follow that the town would thereby be responsible for loss resulting from the default."

—(Nova Scotia—Globe and Rutgers Fire Insurance Company versus Glace Bay.)

Statement of Claim for Wages must be Explicit

A farm labourer in Saskatchewan brought an action against his employer for $1,202.56, which he claimed as arrears of wages earned by him from August, 1919, to April, 1925, in addition to $1,470.59, receipt of which he admitted. At the hearing of this case a question arose as to the form in which the claim was stated, the defendant asking the court to strike out the statement of claim on the ground that it disclosed no reasonable cause of action. The Local Master in Chambers, while holding the claim insufficient, refused, on the ground that it had been admitted in the statement of defence, to strike it out. This decision was sustained by the Chief Justice of the Province in Chambers, but on further appeal by the defendant was reversed by the Saskatchewan Court of Appeal. The latter court pointed out that when a person sues for wages he must state, among the material facts necessary to show a cause of action, that he was employed by, and worked for the defendant, or such other facts as show that the defendant made himself liable to him for the wages earned. These facts should be contained in the statement of claim. They were, however, absent from the claim under consideration. The claim lacked two essentials in not stating, first that the plaintiff worked for the defendant, and second, that the work was done at the defendant's request. The appeal was therefore allowed, the plaintiff being allowed to amend the statement of his claim. The court commented on the technical character of the reasons for appeal, stating that such applications should not be encouraged. "Our rules of pleading regarding statements of claim," the court pointed out, "are made for the purpose of narrowing down the issues to be tried and acquainting defendant with the claim he has to meet."

—(Saskatchewan—Roberts versus Pollock.)

Industrial Establishments may not be Subdivided for Purposes of Compensation

A workman employed as a general blacksmith in Saskatchewan sustained injuries while engaged in shoeing horses, and for these injuries the court awarded him compensation to the amount of $1,342. Appeal was taken by the employer on the ground that the employment in question was not among those to which the Workmen's Compensation Act of the province applied, that is, employment in or about a factory. "Factory," as defined by the Act, "means a building, workshop, or place where machinery is driven by steam, water, or where other mechanical power is used." The building in question was divided into several rooms, including a blacksmith shop and a machine shop, the latter containing machinery which was driven by an 8-horse-power engine. In his capacity of general blacksmith the plaintiff worked for part of his time in the machine shop, the other part being spent in the blacksmith shop. The trial judge held that an establishment of this kind was a "factory" within the meaning of the act. The employer appealed on the ground (1) that the blacksmith or horseshoeing shop was not a factory, inasmuch as all the machinery was in the machine shop; (2) that while the workman was engaged in horseshoeing he was not employed "in or about a factory," as horseshoeing was not part of the business of the factory. The appeal court dismissed the appeal, holding that the greater part of the work on which the plaintiff was engaged actually involved the use of both rooms. The fact that the machinery which was required for the proper performance of work in the blacksmith-room was in another room, did not, in the opinion of the majority of the judges, justify any distinction between the two rooms, or lead to the inference that one was a factory and the other was not. One of the judges, however, dissented from the majority of the court, holding that there was nothing in the horseshoeing department to make it a factory, and that the fact that there was a door connecting it with the machine shop did not make it part of the machine shop. "I can see no reason," he concluded, "why a man cannot be employed for a part of his time in an employment to which the Workmen's Compensation Act applies, and for a part of his time at work to which the Act does not apply."

(A similar question in regard to blacksmith shops of Quebec was the subject of a decision noted in the Labour Gazette, August, 1926, page 843.)

—(Saskatchewan—Nielsen versus Doraty.)

Indefinite Hiring is Subject to Reasonable Notice of Dismissal

The question of the notice of dismissal which must be given to an employee who is engaged for an indefinite period was discussed by the Appellate Division of the Ontario Supreme Court in a case in which the plaintiff claimed to have been wrongfully dismissed. The trial judge found that no misconduct on the part of the employee had been shown; further that the contract of hiring in this particular case was not a monthly hiring, but was a general or indefinite hiring, and this being so, that the hiring was subject to termination on reasonable notice.

The appeal court preferred to regard the contract as being at first for a definite term of one year, and afterwards for a indefinite period. The question thus arose—where there has been a definite hiring for a year, and the relationship has continued by mutual agreement beyond that term, what is to be taken as the implied agreement as to the mode of termination of the contract of hiring? The employer in this case contended that it was automatically terminated at the end of the second year and each succeeding year on the anniversary of the hiring, without any notice. The court held, on the contrary, that the contract would continue so long as the parties mutually agreed, and could only be terminated by reasonable notice. The similar case of *Pollard versus Green* (1923) was cited, where the trial judge held that the contract was terminable on the anniversary, but the Appellate Division in its judgment in the same case took a different view of the law, ruling that "in the absence of an express provision to the contrary, or evidence of some usage that every one must be considered to know and to contract with reference to, a contract of general, indefinite, or yearly hiring and service may be terminated on reasonable notice, and that there is no law requiring the notice to end with a year."

The employer's appeal was therefore dismissed with costs.

—(Ontario—Messer versus Barrett Company Limited).

Compensation in Quebec is determined by General Nature of Occupation

A workman employed by the corporation of the City of Outremont, Quebec, met with two accidents, one on November 15, 1924, and the other on May 15, 1925. The municipality accepted responsibility under the Workmen's Compensation Act for the first accident, but alleged that the second was not within the scope of the law, which is limited to certain specified occupations and to other enterprises "in which machinery is used moved by power other than that of men or of animals." The workman had been employed with the municipal road construction gang for 14 years, making use of a cement mixer, which brought the work within the scope of the act. However, on the day of the second accident the machine was not in action and the corporation contended that for that reason the work on that day was not subject to the provisions for workmen's compensation. The Superior Court at Montreal granted the workman $393 in compensation, laying down the principle that the right to compensation is conditional, not on the nature of the work actually being done by the workman at the moment when an accident happens, but rather by the general nature of the undertaking on which he is engaged.*

—(Quebec—Greco versus the City of Outremont.)

Rights of Minors under Workmen's Compensation in Illinois

The Supreme Court of Illinois has recently handed down a decision which clears up a doubtful point in the Workmen's Compensation Act of the State. A boy of the age of 16 and a half years suffered an accidental injury arising out of and in the course of his employment on May 27, 1920. No claim for compensation was made until April 5, 1924, when the mother, having been appointed guardian, made written claim for compensation and filed with the Industrial Commission an application for the adjournment of the claim.

The Act provides that proceedings for compensation are barred unless claim for compensation is made within six months after the accident. On this ground the Industrial Commission Arbitrator denied compensation. Upon a petition for review the Industrial Commission entered an order awarding compensation and reversing the Arbitrator. The County Superior Court set aside the award of the Commission, but the Supreme Court later reversed this decision and confirmed the order of the Industrial Commission, the Judge pointing out that from time immemorial, the status of a minor of tender years had been recognized in law to be different from that of one of more mature years. The Court therefore ruled that "the Limitations of time provided by the Workmen's Compensation Act do not run against the rights of a minor so long as he is without a guardian."

A resolution condemning the use in industry of paint spraying machines was passed at the annual meeting of the Trades and Labour Congress of Canada last summer in Montreal. The resolution was referred to the Department of Health of the Dominion Government, and the matter has been passed on to the Research Council of Canada for investigation and report.

*The new Workmen's Compensation Act of the Province of Quebec, enacted in 1926, will not take effect until April 1, 1927.

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27] MARCH, 1927 [NUMBER 3

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL employment in Canada showed an increase at the beginning of February, although industries were still affected to some extent by reductions in staffs for inventory purposes, and more so by continued seasonal slackness in the out-of-door industries. The situation was, however, much more favourable than on the same date in any of the six preceding years. This statement is based on returns received by the Dominion Bureau of Statistics from 5,817 firms (each with a minimum of fifteen employees) in industries other than agriculture and fishing. These firms employed 788,887 persons on February, 1927, as compared with 784,484 on January 1. The employment index number (based upon the number of employees of the reporting firms in January, 1920, as 100) stood at 95.4 on the date under review; in the preceding month it was 94.8, and on February 1, 1926, 1925, 1924, 1923, 1922, and 1921, it was 90.7, 86.1, 90.6, 89.5, 78.9 and 90.1, respectively. Reports received from the offices of the Employment Service of Canada indicated that the volume of business transacted in January, 1927, as shown by the average daily placement of applicants for employment, was 10 per cent less than in the previous month, but 12 per cent more than the corresponding average for January, 1926. Reduced placements in construction and maintenance, transportation and farming were mainly responsible for the declines from December, but these decreases were partly offset by increases in logging and manufacturing. At the beginning of February the percentage of unemployment among members of local trade unions stood at 6.4 as compared with percentages of 5.9 at the beginning of January, 1927, and 8.1 at the beginning of February, 1926. The percentage for February is based on returns received by the Department of Labour from 1,541 local trade unions with a total membership of 151,498 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.23 at the beginning of February, as compared with $11.37 for January; $11.50 for February, 1926; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $15.77 for February, 1920; $16.92 for June, 1920 (the peak); $12.54 for February, 1918; and $7.75 for February, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, was slightly lower in February at 150.1 as compared with 150.6 for January; 162.2 for February, 1926; 164.7 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; 200.5 for February, 1919; and 192.0 for February, 1918.

The time loss caused by industrial disputes in February, 1927, was slightly greater than during January, 1927, but less than during February, 1926. Eleven disputes were in existence at some time during the month, involving 402 employees and resulting in the loss of 7,190 working days. Corresponding figures for January were: eight disputes, 261 employees and 4,020 working days; and in February, 1926: ten disputes, 2,450 employees and 21,730 working days.

Industrial Disputes Investigation Act, 1907

During February the Department received reports from a Board of Conciliation and Investigation appointed to deal with a dispute between the Canadian Pacific Railway Company and its clerks, freight handlers, station employees, etc. The Board established in the previous month in connection with a dispute between various shipping companies at St. John, N.B. and their checkers and coopers, was completed, and two new applications for the establishment of Boards were received during the month. Full particulars of recent proceedings under the act are given on page 259.

Alberta legislature and old age pensions

The Alberta Legislature, by 41 votes to 16, passed a resolution on February 23, on motion of the premier, the Hon. John E. Brownlee, in the terms following:

"Resolved, that in the opinion of this House the government should, bearing in mind that

there presently is legislation before the Dominion Parliament with respect to old age pensions, urge upon the Dominion government the necessity for a purely federal plan in order to adequately provide for old age pensions throughout the Dominion."

The foregoing resolution embodied two amendments to the original resolution as submitted to the House by Mr. J. T. Shaw, leader of the Liberal party, which suggested that the provincial government should at once introduce legislation complementary to the old age pension bill before the Dominion Parliament, dividing the financial responsibility equally between the Dominion and provinces. A proposed further amendment moved by Mr. A. A. McGillivray, leader of the Conservative party asked that the subject should be discussed by the legislature, but that legislative action be withheld until the federal bill actually becomes law.

After the resolution had been adopted in the form proposed by the premier, Mr. Arthur Smeaton, representing the Labour party, proposed a further amendment, which would have declared "that this House, while regretting the meagre pension and the 70-year age qualification to deserving aged people under the proposed Old Age Pensions Act now before the Federal Parliament, believes that the best interest of those who will require this assistance will be served by the acceptance of the proposed Act, and therefore this House agrees that with the passing of the federal legislation the necessary legislation be enacted in Alberta bringing the federal Old Age Pensions Act into operation."

The proposed Labour amendment was lost on a division of 12 votes for, and 45 against it.

Pennsylvania Commission on Old Age Pensions

The Governor of the state of Pennsylvania appointed a Commission in 1925, firstly, to study the subject of old age pensions with special reference as to the advisability and practicability of a contributory system as against the straight pension idea; and secondly, to secure all available facts as to the actual working out of these plans in the United States and abroad. The report of the commission was published in January.

The report contains no final recommendation as to the relative merits of a contributory and a "straight" pension, but presents the views of supporters of both these plans. The commissioners believe however that "from an actuarial and insurance viewpoint the inauguration of such a system of deferred annuities presents no serious difficulties." On the other hand, the administration of such a plan presents far greater and more complex problems than the "straight pension" plan. The conclusions reached by the commissioners are stated as follows:—

"After thorough and detailed study of all the above problems, this commission cannot over-emphasize its conviction of the immediate necessity of a constructive plan of state action. It is our unanimous belief that a state system of old age pensions or insurance is by far superior, from every point of view, to any of the existing forms of aged relief. The problem of the indigent aged is being met to-day in a way that is thoroughly inadequate to merit its continuance. We believe that a plan can be worked out which while it would bring contentment and happiness in the later years of the aged dependents, would prove more beneficent from a humane and social point of view, would work out more economically from the viewpoint of our taxpayers and would meet with general approval."

The commissioners express the conviction that the constantly changing conditions in most industrial communities are markedly and steadily shortening the average working life of the great mass of men and women engaged in industry. The average amount of savings accumulated by the wage-earner who has been retired from his job is not, they believe, sufficient to maintain him in old age.

Proposed levy on mining industry for research work

Mr. F. H. Sexton, president of the Nova Scotia Technical College, proposes that a levy of one cent per ton be made on all coal raised in the mines of the province and placed in a fund to be specially devoted to scientific and industrial research on problems connected with coal mining. This recommendation was made by Mr. Sexton at the end of a report by him on the proceedings of the international conference on bituminous coal, held in November, 1926, at Pittsburgh, which report is included with the annual report of the mines of Nova Scotia, reviewed on another page of this issue. The need for scientific research, both pure and applied, Mr. Sexton states, was dominant throughout the whole conference.

Science has not been applied until recently to the economic utilization of coal. During the late war the high prices offered for toluol, from which "T.N.T." was made, and for other by-products, caused the coal companies to instal modern ovens. The heat, gas and smoke, formerly discharged into the air, are now imprisoned and led through tortuous passages and complicated machines to be decomposed into elements from which motor fuel, lubri-

cants, tar, pitch, creosote, fertilizers, drugs, perfumes, dyes and many other modern necessities are derived. President T. S. Baker, of the Carnegie Institute of Technology, strongly recommended to the Pittsburgh conference that large foundations be established in every country for scientific research on coal. In his opinion, co-operative groups of thoroughly trained men are more necessary than large sums of money. Dr. Lander, director of fuel research of the British Department of Scientific and Industrial Research informed the conference that Great Britain had recently awakened to a realization of the true value of its coal, and hoped to rehabilitate her mining industry by modern scientific methods.

Mr. Sexton proposes that a definite program of research be laid out for the next ten years, and that an advisory committee or council be established, its members chosen from the universities, government departments, and operating staffs of the mining companies. The financial support for such a program should come, he thinks, from the industry itself, and should be made a direct charge on all the coal mined (a review of the annual report of the National Research Council of Canada is given in another page of this issue).

Rock dusting in coal mines in Alberta

Regulations in Alberta requiring rock dusting as a preventive of coal dust explosions in bituminous coal mines are reprinted on another page of this issue. Rock dusting has been practised in the coal mines in Great Britain for years, and the practice is now well established on the American continent. The Bureau of Mines of the United States has made numerous tests and has demonstrated that rock dust will confine an explosion to a very small area and soon extinguish the flame. The movement towards the adoption of rock dust has been furthered in recent years by the efforts of the American Association for Labour Legislation, to which references have been made in the Labour Gazette from time to time. The Associated Companies in the United States announced last year that on and after October 1, 1926, they would not insure for compensation any gaseous or dusty mine unless it is rock dusted. Rock dusting has now been approved as a standard practice by the American Engineering Standards Committee, and by the Mine Inspectors' Institute of America, as well as by progressive coal operators and miners. Finally, the American Federation of Labour, at its convention at Detroit last October, expressed approval of the practice.

As to the cost of rock-dusting, a speaker at the convention of the Mine Inspectors' Institute of America, held at Pittsburgh last year, reported that "comprehensive investigations now confirm the earlier estimates that the cost of rock dusting will not exceed one cent per ton of coal mined under normal conditions. The exact figures show a range of from 0.9 down to 0.2 cent." Another mining engineer declared recently that "there is a distinct economic return from rock dusting. As a result of the treatment, these mines (i.e. in Ohio) have been relieved of a coal-dust penalty of 5 cents per $100 of payroll, in accordance with the Compensation Rating Bureau's (Ohio) regulations. On the average annual tonnage produced this is the equivalent of 2 mills per ton, which would make the net cost of maintaining the rock-dusted condition of these mines about 4 mills per ton of coal produced. Rock-dusting also brings its intangible returns," the same authority continued; "it is no little compensation to know that the hazards of a coal-dust explosion have been reduced to a minimum. This knowledge adds appreciably to the peace of mind of employees and employer. There is comfort also in the thought that everything has been done that is humanly possible to discharge one's obligations, both legal and moral, both to the workers entrusted to one's care and to the property which has been entrusted to the management for safe and economic operation."

Rehabilitation of injured workmen in Ontario

Mr. T. N. Dean, statistician of the Ontario Workmen's Compensation Board, recently spoke of the good results already obtained by the provisions made in 1924 for the rehabilitation in industry of injured workmen who have been incapacitated from following their usual occupations. Ontario was the pioneer in providing such retraining. The provincial act was amended in 1924 to enable the Board "to aid in getting injured workmen back to work and to assist in lessening or removing any handicap resulting from their injuries," the total provision under this head not to exceed $100,000 in any calendar year (Labour Gazette, June, 1924, page 479, February, 1925, page 98). The new section became effective on January 1, 1925. Mr. Dean describes the Board's work on behalf of handicapped workmen. "It now seeks," he says, "to educate them into some trade and find them positions so that they may forget their injuries and once more become useful citizens. There was a man hurt in 1923 when he fell from a scaffold," Mr. Dean continued,

"he fractured a small bone in his wrist and was unable to use it. The bone was taken out but the wrist still pained and stiffened. For three years he could not do any work, then we started him at a light job, had him using his wrist a little more all the time till it finally became all right and now he has a pretty good job and receives his pension as well. Perhaps, however, one of the greatest advantages of this new provision in the act, is the fact that it fills the men with the spirit to work and gives them an opportunity to forget their disabilities and know that they are serving a useful purpose."

Manitoba commission on seasonal unemployment

The speech from the Throne at the opening of the sixth session of the 17th Legislature of Manitoba in February intimated that "in order to obtain a balanced development of the province's industrial life and thus lessen the annual unemployment problem, my Government proposes to have an inquiry made into the causes of and remedies for seasonal unemployment. It is of the first importance that all the facts and considerations in this connection be investigated thoroughly, with the purpose of arriving at the best means of providing the solution of this fundamental economic problem in Manitoba at the present time."

The investigation promised by the Government at the close of last session into the question of the settlement of unused lands in the province has now been completed, and a report on the subject is to be laid before the Legislature during the present session.

Canada and the International Child Welfare conventions

Under the title "Canada and the World's Child Welfare Work," a report on the present status of the International Child Labour Conventions, has been issued jointly by the Social Service Council of Canada and the Canadian Council on Child Welfare. After pointing out that Canada, through her representatives at the International Labour Conferences, has agreed to these Draft Conventions, the report proceeds as follows:—

"Now, seven years after the passage of some of those Conventions, we find Canada still ranked by the League with some of the states ranking lowest in the world in the field of child protection because of her attitude towards ratification. Our non-ratification or non-adherence is due to our lack of co-operation across the Dominion, province by province, in obtaining uniform recognition of the high standards which do prevail, and consequently adherence from each province, so that the Dominion may adhere. High standards have been set in child labour and school attendance legislation in Canada, but these standards are being gradually undermined by the granting of broad exemptions. The federal government has done all in its power to bring about adherence, but the exemptions are still recognized by the provincial governments. Our governments and the parents who seek these exemptions excuse themselves on the ground that the child's labour is needed to maintain itself. . . . If the Canadian provinces continue to claim exemption on the ground that the child's labour is needed to maintain itself, then those particular Canadian provinces are wronging the Canadian people in the eyes of the world. Canada has no right to seek other citizens abroad if she must admit to the world that conditions are such in certain parts of this country that little children under fourteen must earn their own living or starve. The Dominion must not be built, agriculturally or industrially, on the backs of its children. One of the worst forms of public hypocrisy is for Canadian citizens and outstanding public men to point to good child labour laws and school attendance laws, to pride themselves thereon, and then to nullify them by poor enforcement and undermining exemptions."

Male minimum wage for new industries in British Columbia

The Hon. A. M. Manson, attorney general of British Columbia, in the course of a debate in the provincial legislature on the estimates of expenditure under the Male Minimum Wage Act, stated that the Board of Adjustment which administers the Act is at present gathering information with a view to establishing minimum rates of wages for other industries than lumbering, the latter industry having been already brought under the operation of the Act (LABOUR GAZETTE, October, 1926, page 948; January, 1926, page 17). He pointed out that in industries such as logging, railway branch operating, tie making, the metal trades, the existing wage was higher than any minimum rate that might be fixed by the Board. Replying to a statement to the effect that lumber mill operators in the interior of the province had reduced the wages of their employees from a higher level to that of the minimum rate fixed by the Board the attorney general stated that the Board could not control such a situation, but he did not think that the policy of grading wages down to the minimum rate would appeal to many employers. He sug-

gested that the only way to deal with such cases would be through labour organizations.

Recent tendencies in industrial relations

Recent developments in the relations of employer and employee in American industry are described in a recent bulletin (No. 17) issued by the National Industrial Conference Board (New York). Clear evidence is found of increased appreciation, on the part of both labour and management, of the importance in their welfare of high purchasing power in the domestic market which results from high wages, low prices and stable employment, which in turn are the outcome of efficient management and economic production. Paternalistic "plans" are giving place to arrangements definitely based on considerations of mutual advantage. For example, employees' group insurance schemes now tend to be on a contributory basis, whereas formerly the employers alone were in most cases responsible for the cost of such insurance. Similarly, the sale of stock by corporations to their employees is increasingly regarded by both parties as an investment, and its advantages are considered in terms of its effect in promoting thrift, in the increase of the worker's concern in the productive success of the enterprise, and in enhancing his purchasing power. Again, works councils with employees' representation have latterly become established definitely as institutions making for industrial stability. Reference is made in this connection to the Railway Labour Act passed by Congress last year (LABOUR GAZETTE, May, 1926, page 423). The novelty of this Act, it is pointed out, "lies not so much in the fact that mediation and arbitration are provided for by statute as in the fact that the bill was an agreed measure formulated by representatives of the carriers and of the employees' unions—being in effect a collective agreement which has been given the sanction of law by Congress. The first case to come before the Board of Mediation was the demand of the Order of Railway Conductors and the Brotherhood of Railway Trainmen for a 20 per cent increase in wages made before the Act was passed and upon which a conference between railroad managements and the employees failed to bring an agreement."

Unemployment insurance in Great Britain

The unanimous report of the Committee of Inquiry into unemployment insurance in Great Britain is outlined on another page of this issue. It has been generally accepted as marking the close of the experimental period which commenced in Great Britain with the enactment of the original Act of 1911. Unemployment insurance is recognized by the committee as likely henceforth to be a permanent feature of the British Code of social legislation. The committee examined the charge frequently made in regard to alleged abuses of the so-called "dole." They find that these allegations have extraordinarily little foundation in fact. The secretary of the Charity Organization Society testified that he began by thinking the abuses serious, but on inquiry he had been unable to find them, concluding that the erroneous ideas in regard to the corrupting effects of the "dole" arise from the fact that "unfavourable instances impress themselves upon the memory, while the proper and smooth working of a scheme passes almost unnoticed." The committee proposes the extension of the existing partial and limited scheme, so that it will afford complete insurance against the risk of unemployment; the employers, the workpeople and the state each contributing to the fund in equal proportions. But although a permanent insurance scheme is provided for, the committee have not overlooked the more fundamental problem: "It would be unfortunate," they say, "if preoccupation with the task of ascertaining how best such unemployment can be insured against were to weaken any concerted effort to get rid of unemployment itself."

Collective agreements in the United States

The United States Bureau of Labour Statistics recently published a digest of trade and collective agreements between employers and employees made during the year 1925. Agreements affecting railroads are not included, owing to their voluminousness. The report notes some general characteristics of collective agreements. They are usually the result of bargaining between a local union and local employers. Indeed, with the exception of the glass, pottery, and wallpaper unions, and provisions regarding the use of the union label, few agreements binding the locals are made by national officers, although certain national officers demand the right to approve agreements made by the local unions.

Examination of the agreements shows that the eight-hour day is very generally observed in the organized trades. The 44-hour week is practically the rule of the building, clothing, metal, printing, and stone trades for day work, while in many instances 40 hours' work only is required of night workers. There are, indeed, a few instances where only 40 hours a week are required for day workers also.

In addition to the question of hours of labour, the most usual subject covered by the collective agreement is the rate of wages to be paid. Other subjects not infrequently included relate to terms of apprenticeship, provision for arbitration, seniority of employment, and equal distribution of work. Of late there has been tried in the clothing industry a system of unemployment insurance whereby a fund is created by contributions from the employer and employees and is used to make payments to employees during the period of unemployment. Various attempts have been made to tide over the slack periods of work. The usual method in such circumstances has been to discharge the superfluous help and keep at work only as many as are needed, in which cases the agreement generally provides that the older employees shall be retained and those with a shorter service shall be discharged first. Another method is to distribute the work as equally as possible, and a third is a system of unemployment insurance, which is perhaps more thoroughly worked out in the clothing industries than in others.

Industrial court in Great Britain

A tribute to the Industrial Court of Great Britain was paid by Sir William W. Mackenzie, president of the court since its establishment in 1919. He stated that from a permanent court of this kind a code of industrial common law might in time emerge which would beneficially influence the whole sphere of industrial relations. The general spirit of arbitration is spreading, he declared, and is gaining popular confidence. On the other hand he warned his hearers that the general principle of arbitration on the failure of negotiations must necessarily be a slow growth. He stated that, to ensure success great care must be taken in the selection of arbitrators; it was too much to ask of employers and workpeople to place the decision of a serious industrial dispute in the hands of newly appointed and untried arbitrators. It was evident, he claimed, that a body of men accustomed to exercise judicial authority, trained by experience to sift and weigh evidence, and in close contact with the atmosphere and actual daily life and its details of the factory, workshop, plant, or office, are more suited to adjudicate on industrial problems than men, however eminent in other walks of life they may be, who are called in on occasion to act as arbitrators.

The Industrial Court, established under the Industrial Courts Act of 1919, is a permanent body, which sits usually in London, but occasionally hears cases at other important centres. Individual members of the court may be deputed to hear cases locally where the parties desire a speedy hearing. The establishment of a standing arbitration tribunal was one of the recommendations of the committee on relations between employers and employees, better known as the Whitley Committee. It had been found that while conciliation machinery existed in a number of trades, some being in the form of joint industrial councils, the parties were often unable to reach a settlement of their differences. The Industrial Court was established to provide an independent tribunal to which such matters could be referred. The number of cases heard by the court since its inception is 1,250. Of the court's decisions in these cases only two have been rejected by one or more of the parties concerned.

Nature and work of trade boards in Great Britain

An official of the British Ministry of Labour described the work of the Trade Board at a conference on methods of conciliation and arbitration held at London recently. At the present time there are 44 trade boards in operation, covering 1,250,000 workers in 39 different trades. The trades affected are those least organized. Less than one-fifth of the workers and less than one-half of the employers under the trade board system belong to no organization. A trade board consists of representatives of employers and workers, with three appointed members whose function is to bring both sides together and prevent, if possible, a deadlock. When minimum rates are decided on by the trade boards two months are allowed for objections, and they then come before the Ministry of Labour for confirmation. Notice of the rates fixed are sent to each employer, who is obliged to post it up for the information of his workers. There are 147,000 establishments under the trade board system. They are periodically inspected by the Ministry. Last year 11,400 of these establishments, employing 111,000 workers were visited by the inspectors of the Ministry. In respect of 2,550 of the establishments inspected, employing 6,600 workers, it was found necessary to insist on the payment of arrears of wages. It was found that 94 per cent of the entire body of workers under the trade board system of workers were getting the full maximum rates to which they were entitled; an odd 3 per cent were getting from 90 to 100 per cent of their proper rate, and 3 per cent were getting less than 90 per cent of the rates to which they were entitled. During 1926 it was necessary

for the Ministry to bring 70 cases before the courts for neglect of duty under the Trade Boards Acts.

Proposed pool for distribution of British coal

Co-operation by coal producers in selling their coal was included among the recommendations of the British Royal Commission on the Coal Industry (1925). The report of the "Samuel Commission" (so called from its chairman, Sir Herbert Samuel) was outlined in the LABOUR GAZETTE, April, 1926, pages 393-395. The commission found that "the industry as a whole has so far failed to realize the benefits to be obtained by readiness to co-operate." They suggested that "large financial advantages might be gained by the formation, in particular, of co-operative selling agencies. They are specially needed in the export trade." In view of these recommendations a departmental committee was appointed by the government in June, 1926, to inquire into and report upon the desirability and practicability of developing co-operative selling in the coal mining industry. This committee, consisting of nine members, including the chairman, reported towards the end of the year, eight members being favourable to the establishment of co-operative selling, and three expressing the opinion that "the free and open competition under which the coal trade in this country reached the commanding position which it occupied in the markets of the world before the war is that which is best suited to its development in the future."

The main report, signed by eight members of the committee, makes the following recommendations:—

1. The development of organized marketing in the coal-mining industry is desirable in order to avoid excessive competition, to effect economies and improvements in the marketing of coal and to help to stabilize the industry.

2. The present lack of consolidation in the industry is a serious impediment, and the full development and benefits of organized marketing cannot be realized unless the industry can be consolidated, by amalgamations, into a much smaller number of units.

3. Organized marketing is only immediately practicable in those localities and districts where there is a fairly general desire among the coal owners to develop it.

4. The voluntary development of local arrangements—more particularly selling pools—among neighbouring colliery owners is advocated.

5. District organizations, of wider scope than local arrangements, are the next stage of development. Where, in any particular district, a fair and equitable scheme for more efficient marketing is supported by a majority of 75 per cent, or more calculated on a tonnage basis, powers should be vested in a tribunal to make the scheme compulsory, subject to effective safeguards for the minority.

6. The co-ordination of district associations will be, ultimately, a desirable development, but can only be justified to the community by the industry effecting and sharing with the consumer economies, not only in the marketing of coal, but in all phases of its production and transport.

7. The Government is advised to consider the question of revising and clarifying the law on restraint of trade so as to remove the present uncertainty as to the status in law of marketing organizations.

8. In the export trade, local selling pools and the possibilities of closer co-operation between colliery owners and exporters should be developed.

In regard to the probable effects of organized marketing on labour the report points out that the wages of coal miners are governed to a large extent by the prices realized for coal. A widespread feeling was found among the miners, not only that wages are unnecessarily depressed by the way in which excessive competition forces these prices down, but also that some of the proceeds of coal sales, which equitably ought to go into the colliery revenue and so into the wages estimates, are taken by subsidiary selling companies. Labour representatives on the committee claimed that the resulting discontent would be mitigated if marketing at the collieries themselves were effectively organized, and if miners were given more information as to the marketing side of the industry and a reasonable assurance that destructive competition had been eliminated.

The report contains an account of the origin, constitution and working of the Rhenish-Westphalian Coal Syndicate and of the machinery set up under the German Imperial coal law of 1919 to co-ordinate and control the coal cartels of Germany and to protect the interests of the consumers.

Employment of children in the United States

A committee of the National Association of Manufacturers (United States) has published a collection of charts purporting to show the actual facts about child labour in the United States as revealed by government statistics.

The association undertook this inquiry in view of the recent failure of the effort to secure the necessary ratification by three-fourths of the States of the proposed twentieth amendment to the United States Constitution in regard to child labour. The rejection of the proposed amendment, it is pointed out, places responsibility in regard to child labour on the individual states. Some of the facts brought out by the committee are stated as follows:—

There are 12,502,582 children under 16 years old enumerated in the census, of whom over

two-thirds are less than 14. Of the total number 8.5 per cent, or 1,060,858, were gainfully employed. Among all the 10-15-year-old children employed, agriculture heads the list with 61 per cent, clerical occupations take 7.6 per cent and the manufacturing and mechanical industries come third with only 85,337, or 7.5 per cent of the total number. In every age-grouping of children under 16 years old, agriculture employs the greatest number. The greatest proportion of employment of persons less than 16 years old is in agriculture with 5.91 per cent, as contrasted with only 1.45 per cent in manufacturing and mechanical industries.

The manufacturing and mechanical industries which employ over 5,000 children each are textiles, metal industries, clothing industries, food and shoe factories. Messengers, bundle clerks, office boys, newsboys combined total 14,085 more than the textile industry, and there are more newsboys than there are 10-15-year-old children in any manufacturing industry. The five states with the largest number of 10-15-year-old textile operatives in 1920 were Massachusetts, Pennsylvania, North Carolina, Rhode Island and New Jersey. In only ten states were more than 5 per cent of the operatives less than 16 years old, Pennsylvania and Wisconsin leading with 8.5 per cent. The proportion of total children in agricultural pursuits was 5.2 per cent in 1920 and 13.2 per cent in 1910. The proportion of total children in non-agricultural pursuits was 3.3 per cent in 1920 and 5.2 per cent in 1910.

The United Farmers of Alberta passed a resolution at their recent annual convention recommending that the cost of the poor relief should be borne by the province as a whole rather than by the municipalities.

The Board of Control of Toronto lately decided to insert a clause in the tenders for new construction work in connection with the provincial exhibition, calling for the employment of union labour.

Nineteen employees of the Department of Railways and Canals in New Brunswick have been awarded Imperial Service Medals by His Majesty the King. Notice of the decoration appeared in the issue of the CANADA GAZETTE of February 12.

The report of the Secretary of State of Canada for the year ending March 31, 1926, states that 15,403 persons were naturalized under the Naturalization Acts of 1914 and 1920 during that period. This total includes the wives and minor children of persons whose names are shown on the certificates. Tables are given showing the country of origin, former nationality, occupation, present residence and certificate number of the persons naturalized.

The Ontario Builders' and Supply Association at their sixteenth annual convention, held at Chatham early in March, resolved to petition the provincial legislature to enact a building code which would govern conditions in smaller towns and in summer resorts where no local code exists. The petition recommends that more attention should be required to be paid at such places to fireproof construction and sanitation. The association also placed itself on record as promising co-operation with the Construction Apprenticeship Council of Ontario in a proposed scheme of developing the apprenticeship system in the various construction trades or any other that will prove successful.

The last annual report of the Canadian National Railway system states that the initial results of the co-operative plan of management in the Moncton shops had been so successful that the plan was extended to the shops at Transcona, Fort Rouge, Stratford, London, Leaside, St. Malo and Pointe St. Charles. Out of 1,187 recommendations made at various regional meetings 857 were adopted, 123 were dropped, and 207 were left pending. The co-operative plan, it is stated, has been adopted also by the Chesapeake & Ohio and the Chicago & Northwestern railways. At a meeting recently held in New York, at which representatives of officials and employees of various railways were present, it was evident that the plan has found as much favour with individual employees as with shop superintendents.

The Society of St. Vincent de Paul, Halifax, Nova Scotia, in their report for the past year, state that 1,297 persons were assisted, and the sum of $4,500 raised for distribution. They recommend that a system of Mothers' Allowances should be established in the province. Several of the families under the society's care at the present time consist of widows with young children, the report states; and it would be almost impossible for any private organizations to provide adequately for such cases, which occur every year. Such families, it is suggested, should be provided for by some system of Mothers' Pensions.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at the end of February was reported by the superintendents of the Employment Service of Canada to be as follows:—

The cut in the logging industry in the Province of Nova Scotia was almost finished and hauling to the river banks preparatory to the spring drive was being done. The fishing industry was reported to be only fair as activity was being interfered with by floating ice. While some building was being carried on in the City of Halifax, there was little or none being done elsewhere throughout the province. The manufacturing industries remained normal, with the iron and steel group reported as fair. For the season of the year the coal mining industry was showing normal activity. The transportation industry was just fair, while trade was rather satisfactory.

Reports from New Brunswick indicated that the fishing industry was experiencing good conditions. Logging cuts having been concluded, or practically concluded, in this province, men were being released from bush work in some cases, after a satisfactory season. The manufacturing industries were normal. With building and construction opening up to some extent, it was reported that preparations were under way for considerable building as soon as weather conditions became more favourable. The winter port of St. John was busy. Trade was reported as fair.

The logging industry in the Province of Quebec was slackening up, with preparations for river driving beginning. In most lines of manufacturing, conditions were good. In the City of Quebec the leather industry reported improvement; tobacco and cigars in Montreal were likewise improved; Sherbrooke reported textiles as busy; the pulp and paper industry at Three Rivers was not quite so busy as in previous months; and the metal trades generally throughout the province were picking up. Building and construction were quiet throughout Quebec. Trade was seasonally quiet, but transportation was stated to be active. Generally speaking conditions in this province showed a noticeable improvement over the preceding month and also over February of 1926.

Orders for farm help were beginning to be received by the Ontario employment offices in larger numbers, and plenty of applicants were available. Although only a few workers were being taken on by the manufacturing industries, the prospects of further increases in activity were bright, and a considerable portion of the increases in activity made throughout 1926 have apparently been maintained. Considering the time of the year, a fair amount of building and construction was progressing, and buildings to be undertaken in a few weeks time were in contemplation at several points. After a rather active winter, work in the logging industry was falling off, and the Ontario employment offices reported few placements as being made. Although not increasing staffs to any extent, the mining industry continued to be rather busy, with a small labour turnover. The shortage of certain classes of female domestic workers seemed to be more pronounced at several points throughout the province.

With no shortage of applicants, orders for farm workers in Manitoba were on the increase. Building and construction prospects, especially in Winnipeg were rather promising throughout this province, although the work in hand at the present time was small. Placements from Winnipeg in the logging industry were on the decline, owing to the season being so very advanced. Trade was reported as satisfactory. General conditions in Manitoba were not unfavourable considering the season of the year.

From Saskatchewan a noticeable increase in orders for farm help was reported also, but no shortage of applicants was in evidence. The construction industry was very quiet. From Prince Albert it was reported that the advance of the season had decreased the activities of the employment office in the matter of placements in the logging industry. Orders for men for casual employment were being received in fair volume, and unemployment throughout the province was being relieved to quite an extent by their receipt. With orders for female domestic workers rather numerous, no very pronounced shortages of applicants were reported.

As in Manitoba and Saskatchewan farm orders in Alberta were on the increase, but no shortage of applicants was reported. Although building and construction at the moment were quiet, prospects were regarded as fair. Some logging placements were still being made. The coal mining industry was rather dull, and not a very great deal of activity was reported. There was a fair number of vacancies for female domestic workers. Conditions generally seemed to compare quite favourably with previous years.

While the logging camps in the Province of British Columbia were not increasing their staffs to any considerable extent, in some dis-

tricts camps which had been closed appeared to be about to re-open. The mining industry throughout this province remained normal. Construction activity for the time of year was fair with evidence at hand of work of a rather substantial volume developing during the coming season. The manufacturing industries were rather quiet in so far as engaging additional employees was concerned. General conditions were considered as rather good and for the season of the year unemployment was not serious.

EMPLOYERS' REPORTS.

There was an increase in employment as reported by employers at the beginning of February, but the situation continued to be affected to some extent by inventory shut-downs, and more so by continued seasonal slackness in the out-of-door industries. Employment was, however, in much greater volume than on the same date in any of the six preceding years. The Dominion Bureau of Statistics tabulated returns from 5,817 firms, whose staffs aggregated 788,-

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review* §For group figures see articles elsewhere in this issue. **Figures for four weeks ending February 26, 1927, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

887 persons, as compared with 784,484 on January 1. The index number (with January, 1920, as 100) stood at 95.4 on the date under review, while in the preceding month it was 94.8 and on February 1, 1926, 1925, 1924, 1923, 1922 and 1921 it was 90.7, 86.1, 90.6, 89.5, 78.9 and 90.1, respectively.

There were reductions in employment in the Maritime and Prairie Provinces, while elsewhere the tendency was upward. In the Maritime Provinces there were large losses in the construction, together with less extensive contractions in manufacturing, coal-mining, transportation and trade, causing a considerable falling off in employment. In Quebec, manufacturing, especially the textile, tobacco and beverage, pulp and paper and rubber industries, reported marked improvement, and logging and mining were also busier; on the other hand, there were pronounced declines in construction, trade and transportation. In Ontario, important gains were made in manufacturing, notably in iron and steel, lumber and textile factories, and in logging, while trade, construction and transportation were seasonally slacker. In the Prairie Provinces, the food, lumber and iron and steel industries reported reductions, as did transportation, construction and trade, in which they were seasonal in character. Logging, pulp and paper and textiles, however, registered improvement. In British Columbia there was considerable recovery in manufacturing, particularly in the lumber, pulp and paper and metal industries. Logging also showed important gains, but there were losses in trade and construction.

An analysis of the returns for the cities for which separate tabulations are made shows that in Montreal, Ottawa Windsor and the other border cities, and Vancouver recorded improvement, while in Quebec, Toronto, Hamilton and Winnipeg the trend was downward. In Montreal, manufactures showed substantial recovery, but seasonal declines in trade, construction and transportation reduced the general level of employment. In Quebec, construction showed the greatest losses, although trade and transportation were also slacker. In Toronto there was a considerable falling off in employment in trade, offsetting large gains in manufacturing. Construction also released employees. In Ottawa, manufacturing was busier, while trade showed some curtailment. In Hamilton, manufacturing was quiet, but transportation afforded rather more employment. In Windsor and the other border cities, automobile factories recorded substantial improvement. In Winnipeg, trade and construction reported reduced activity, but manufacturing was brisker. In Vancouver, the metal, food, construction and transportation groups registered expansion, while trade was seasonally slacker.

Manufacturing showed considerable revival, the most marked recovery taking place in iron and steel, textile, lumber, pulp and paper, tobacco, distilled and malt liquor and rubber works. On the other hand, animal food, building material and musical instrument factories recorded losses in personnel. Logging reported seasonal improvement, while declines of the same nature took place in mining, transportation, construction and maintenance and trade.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of February, 1927.

Trade Union Reports.

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons engaged in work other than their own trades, or who are idle because of illness, are not considered as unemployed. Unions involved in an industrial dispute are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The percentage out of work among local trade unions at the end of January was slightly greater than that of the previous month, as was manifested by the returns tabulated from 1,541 labour organizations with a combined membership of 151,496 persons. Of these 9,748 or a percentage of 6.4 were unemployed as compared with 5.9 per cent on December 31, 1926, and 8.1 per cent in January, 1926. Unions in all provinces with the exception of Nova Scotia, Alberta and British Columbia reflected less favourable conditions during January than in the preceding month, the most substantial percentage reduction being that of 4 per cent in Saskatchewan due to inactivity in the building trades and among transportation workers. In the other provinces the contractions were slight. Alberta unions showed an increase in employment of nearly 3 per cent, but the gains in both Nova Scotia and British Columbia were nominal. In comparison with the returns for January, 1926, Nova Scotia unions registered substantial improvement due to a much better situation in the coal mines of the province. Quebec, Ontario, Manitoba and Alberta members were also afforded a slightly greater volume of employment. In New Brunswick and Saskatchewan the reductions were small, particu-

larly in the latter province, and in British Columbia the situation remained unchanged. The manufacturing industries with 410 unions reporting a membership of 41,744 persons registered a nominal increase in unemployment as compared with the previous month and practically no change when making a comparison with the returns for January, 1926. Leather workers were much busier than in December, and textile workers and cigar makers also reported noteworthy gains. A greater volume of unemployment was indicated among general labourers in Quebec and minor contractions among gas workers, printing tradesmen, paper makers, hat and cap makers and iron and steel workers. There was very little change in the situation among Nova Scotia coal miners as compared with the previous month, but in Alberta all members were reported engaged as compared with considerable unemployment in December. In the British Columbia coal mines employment was on a slightly higher level. A more favourable situation was maintained among Nova Scotia quarry workers than in the previous month. In the building and construction trades reports were tabulated from 178 unions with 17,092 members, 22.6 per cent of whom were idle on January 31, as compared with 19.3 per cent in December and 26.6 per cent in January, 1926. The situation for steam shovel and dredgemen showed substantial improvement as compared with December, and lesser increases were indicated among tile layers, lathers and roofers, bridge and structural iron workers and painters, decorators and paper hangers. Bricklayers, masons and plasterers, hod carriers and building labourers, on the other hand, were much less actively engaged, and among plumbers and steamfitters and granite and stone-cutters there was slightly more unemployment. Among carpenters and joiners and electrical workers the level of employment remained the same as in December. In comparison with the returns for January, 1926, all tradesmen except bridge and structural iron workers, tile layers, lathers and roofers and bricklayers, masons and plasterers were afforded more work, but the reductions in these trades were pronounced. Returns received from 642 unions of transportation workers, with a membership of 56,351 persons showed an unemployment percentage of 3.5 as compared with 3.0 per cent in December. Steam railway employees whose returns constitute nearly 82 per cent of the entire group membership reporting showed a slight drop in employment, but the improvement among navigation workers was noteworthy. In comparison with the returns for January, 1926, when 5 per cent of unemployment was registered, the steam and street and electric railway divisions reported increases in operations, but employment in the navigation division declined. Retail shop clerks were fully engaged as in December. Among hotel and restaurant and theatre and stage employees, stationary engineers and firemen and barbers there was slightly less activity than in December. Fishermen and lumber workers and loggers reported small percentages of idleness as compared with considerable slackness in December.

EMPLOYMENT OFFICE REPORTS.

Reports of the Employment Service of Canada for the month of January, 1927, showed 22,664 references to positions, and a total of 21,311 placements. Of these the placements in regular employment were 14,424, of which 11,379 were of men and 3,045 of women, while placements in casual employment were 6,887. Vacancies offered by employers to the Service numbered 22,922. Of these 15,507 were for men and 7,415 for women, while applications for employment were registered from 25,561 men and 10,114 women, a total of 35,675. A slight decrease was shown in the volume of business transacted when the above figures are compared with those of the preceding month, but a gain was shown when a comparison is made with the records of January last year. The reports for December, 1926, showed 26,287 vacancies offered, 36,245 applications made and 24,667 placements effected, while in January, 1926, there were recorded 20,699 vacancies, 35,988 applications for work, and 19,009 placements in regular and casual employment. A report in detail of the work of the offices for the month of January, 1927, will be found elsewhere in this issue.

PRODUCTION IN CERTAIN INDUSTRIES.

Some figures indicating the recent movements of trade and industry are given in the table on page 254. The Dominion Bureau of Statistics, reported that the production of pig iron in Canada during January, 1927, amounted to 51,717 long tons, marking a decline of 4 per cent from the 53,971 tons made in December, 1926. Production in January, 1926, amounted to 56,644 tons. Foundry iron at 21,900 tons showed some improvement in comparison with the 18,620 tons made last month, but this gain was more than offset by the drop in the output of basic iron to 28,852 tons from 35,351 tons in December. Malleable iron, to the extent of 965 tons, was produced in January; no malleable iron was made in December.

Blast furnace charges for the month included 91,380 long tons of imported iron ore, 59,560 short tons of coke and 28,759 short tons of limestone. The average charge for each long ton of pig iron produced was 3,958 pounds of imported ore, 2,303 pounds of coke and 1,112 pounds of limestone.

No additional furnaces were blown in during the month nor were any shut down or banked, the same five furnaces being in blast on January 31 as on December 31. The active furnaces were located as follows: 2 at Sydney, N.S.; 2 at Hamilton, Ont., and 1 at Sault Ste. Marie, Ont.

Production of ferro-alloys at 3,926 tons in January, showed a slight increase over the 3,804 tons made in December. The month's output consisted mostly of the grade having a high manganese content but small quantities of ferrosilicon were also produced. A slight increase was recorded in the output of steel ingots and castings during January when 58,551 tons were produced in Canadian furnaces as compared with 58,493 tons in December, 1926 and 68,536 tons in January a year ago. Production included 55,898 tons of steel ingots and 2,653 tons of direct steel castings; of the steel castings 1,378 tons were made in basic open hearth furnaces, 153 tons were convertor castings and the balance, 1,122 tons, was produced in electric furnaces.

Pig iron prices showed no change in January. No. 1 foundry at Montreal being still quoted at $28.20 and No. 2 foundry at $27.70 per ton. At Toronto No. 1 foundry was $25.80 and No. 2 foundry $25.30. The bureau's index number for iron and its products (1913 prices = 100) declined slightly being 145.5 as compared with 146.0 in December. This was due mainly to slight declines in wire and in steel sheets.

Coal Production.—Full statistics of coal production during January are not yet available.

The output of coal from Canadian mines during December was 5 per cent more than the production for the preceding month, and 29 per cent greater than the average for December in the past five years. The figures were 1,922,808 tons in December as against 1,818,458 tons in November, and an average of 1,492,357 tons during the five preceding years.

All the coal-producing provinces except Nova Scotia, Saskatchewan and British Columbia showed gains in production over the preceding month, and the outputs of Nova Scotia, Saskatchewan and Alberta were greater than the average for the month in the five preceding years.

Men employed in the coal mines of Canada during December numbered 31,018, of whom 24,009 worked underground, and 7,009 on surface, as compared with a total of 30,150 in November, of whom 23,303 worked underground and 6,847 on surface. Production per man was 61.9 tons in December as against 59.8 tons per man in November. During December the production per man-day was 2.6, being the same as in November. The tonnage lost (Table No. 4) was largely due to "lack of orders."

EXTERNAL TRADE

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in January, 1927, the merchandise entered for consumption amounted to $78,805,632, as compared with $69,736,142 in January, 1926. The domestic merchandise exported, amounted to $84,094,692 in January, 1927, as compared with $138,421,475 in December, 1926, and with $84,718,819 in January, 1926.

The chief imports in January, 1927, were: Fibres, textiles and textile products, $16,403,120; iron and its products, $14,605,550, and non-metallic minerals and products, $11,736,187.

The chief exports in the same month were in the group of agricultural and vegetable products, mainly foods, $27,316,396; wood, wood products and paper, $19,666,403, and animals and animal products, $12,782,788.

In the ten months ending January, 1927, exports of agricultural and vegetable products, mainly foods, were valued at $446,863,591; wood, wood products and paper, $237,392,202, and animals and animal products, $144,810,087.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada by the municipal authorities during the month of January, 1927, amounted to $5,429,299, as compared with $11,508,818 in December, 1926, and with $4,719,534 in the corresponding month last year. The decrease in the first comparison was 52.8 per cent, and in the latter the increase was 15.0.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in February, 1927, at $19,516,700 as compared with $16,771,800 in January, 1927, and $13,477,600 in February, 1926. The contracts awarded in February, 1927, were classified as follows:—business buildings, $10,661,200, residential work, $4,777,900; engineering, $3,515,000, and industrial building, $562,600. The apportionment of contracts awarded

in Canada by provinces during February, 1927, was:—Ontario, $9,725,500; Quebec, $7,006,700; Prairie Provinces, $1,256,500; British Columbia, $1,098,500 and the Maritime Provinces, $429,500.

The "contemplated new construction" in Canada during February, 1927 according to the same *Review*, totalled $88,257,800, $6,995,000 of this amount being for residential building; $21,880,200 for business building; $17,359,500 for industrial building, and $42,023,100 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering).

Strikes and Lockouts

The time loss due to industrial disputes in February, 1927, was slightly greater than during January, 1927, but less than during February, 1926. There were in existence during the month eleven disputes, involving 402 workpeople, and resulting in a time loss of 7,190 working days, as compared with eight disputes in January, involving 261 employees, and resulting in a time loss of 4,020 working days. In February, 1926, there were on record ten strikes and lockouts, involving 2,450 workpeople, resulting in a time loss of 21,730 working days. One of the strikes commencing prior to February, 1927, terminated during the month and one of the strikes recorded as commencing during the month also terminated during February. At the end of the month, therefore, there were on record nine strikes and lockouts, affecting 252 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were slightly lower due mainly to seasonal declines in the prices of eggs. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.23 at the beginning of February, as compared with $11.37 for January; $11.50 for February, 1926; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $15.77 for February, 1920; $16.92 for June, 1920 (the peak); $12.54 for February, 1918; and $7.75 for February, 1914. Besides a substantial fall in the price of eggs there were declines in the prices of mutton, salt, pork, bacon, lard, rolled oats, evaporated apples, prunes and potatoes. Slight advances occurred in the prices of sirloin steak, butter, cheese, flour and yellow sugar. Including the cost of fuel and rent with that of foods the total budget averaged $21.46 at the beginning of February, as compared with $21.59 for January; $21.87 for February, 1926; $21.19 for February, 1925; $21.18 for February, 1924; $21.17 for February, 1923; $21.07 for February, 1922; $24.85 for February, 1921; $26.92 for June, 1920 (the peak); $24.71 for February, 1920; $19.80 for February, 1918; and $14.54 for February, 1914. Fuel was slightly higher. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics was slightly lower at 150.1 for February, as compared with 150.6 for January; 162.2 for February, 1926; 164.7 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May, 1920 (the peak); 238.8 for February, 1920; 200.5 for February, 1919; and 192.0 for February, 1918. In the classification according to chief component materials two of the eight main groups advanced, five declined, while one was practically unchanged. The Vegetable and Products group advanced slightly, due to higher prices for grains, flour, tea and fruits, which more than offset declines in the prices of potatoes, raw sugar, rubber, hay and straw. The Non-Ferrous Metals group was also somewhat higher. The groups which declined were: The Animals and Products, due to lower prices for cattle, sheep, butter, lard and eggs, which more than offset the higher prices for hogs, bacon, poultry, furs and hides; the Fibres, Textiles and Textile Products, due to declines in the prices of cotton yarn, wool, sash cord, jute, hessian and binder twine, which more than offset higher prices for raw cotton and silk; the Wood, Wood Products and Paper group, due to declines in the prices of ground wood, matches, and spruce siding; the Iron and its Products group, due to the lower levels prevailing for pig-iron, steel billets and spring hinges; and the Non-Metallic Minerals, due mainly to a decline in the price of coal. The Chemicals and Allied Products group was practically unchanged.

Employees with fifty years service on the old Canadian Government and Canadian National Railways were recently given special passes entitling them to travel over the whole system. These passes are engraved and embossed in gold and bear the signature of the president of the lines, Sir Henry W. Thornton. Accompanying each pass is a card expressing the appreciation of the railways for the services rendered by the employees.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF FEBRUARY, 1927

DURING the month of February the Department received reports of a Board of Conciliation and Investigation established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees on eastern and western lines, being clerks, freight handlers, station employees, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Applications Received

During the month two applications for the establishment of Boards of Conciliation and Investigation were received, as follows:—

(1) From employees of the Corporation of the City of Ottawa, being fire fighters, members of Local 162, International Association of Fire Fighters.

(2) From certain employees of the Ottawa Sanitary Laundry Co., being members of Local 275, International Laundry Workers Union.

Other Proceedings under the Act

The Board established to deal with a dispute between various shipping interests of the Port of St. John, N.B., and certain of their employees, being checker and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, was completed during February by the appointment of the Honourable Henry Miles, of Montreal, as chairman on the joint recommendation of the other two members of the Board, Mr. J. T. Foster, of Montreal, the employees' nominee, and Mr. J. H. Lauer, also of Montreal, appointed by the Minister in the absence of a recommendation from the employers.

Report of Board in Dispute between the Canadian Pacific Railway Company and its Clerks, Freight Handlers, Station Employees, etc.

A report was received from the Board established to deal with a dispute between the Canadian Pacific Railway Company and certain of its employees on eastern and western lines, being clerks, freight handlers, station employees, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed of Mr. D. R. C. MacLean, of Winnipeg, chairman, appointed by the Minister of Labour in the absence of a joint recommendation from the other members of the Board, Messrs. J. B. Coyne, K.C., and David Campbell, K.C., both of Winnipeg, nominees of the employer and employees respectively.

The dispute related to the employees' demand for increased wages and changed working conditions. The differences regarding working conditions were settled by direct negotiations between the parties concerned, and the report of the Board, which was signed by the chairman and the employees' representative, dealt with the question of wages, recommending an increase of four cents an hour to hourly rated employees and an equivalent increase to monthly rated employees. Mr. Coyne, the company's representative on the Board, presented a minority report. The text of the two reports follows:—

Report of Board

Industrial Disputes Investigation Act, 1907.

Report of Board of Conciliation and Investigation in the matter of a dispute between the Canadian Pacific Railway and their Railway Clerks, Freight Handlers, Station and other Employees, Members of The Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

To the Honourable,
The Minister of Labour,
Ottawa, Ontario.

Sir:—The Board of Conciliation and Investigation established in the matter of a dispute between the Canadian Pacific Railway Company and certain of its employees on Eastern and Western Lines, being clerks, freight handlers, station employees, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, said Board being composed of Mr. D. R. C. MacLean, of Winnipeg, Manitoba, Chairman, Mr. J. B. Coyne, K.C., of Winnipeg, Manitoba, and Mr. David Campbell, K.C., of Winnipeg, Manitoba, convened at Winnipeg, Manitoba, on Thursday, the 2nd day of December, A.D., 1926, and afterward held meetings in Montreal and Winnipeg.

While arranging for a suitable time and place for convening, it came to the attention of the Board that the employer was desirous of reopening negotiations with the employees to settle the matters in dispute and proposed that further negotiations take place at Montreal. Representatives of the employees appeared before the Board and stated that they were willing to reopen negotiations as desired by the employer, provided the board meet in Montreal on the 13th December, A.D., 1926, as had already been suggested, to proceed with the hearing of the matters in dispute should negotiations fail. These negotiations took place with the consent of the Board, but proved abortive.

The Board reconvened at Montreal on the 13th December, A.D., 1926, and the parties to the dispute were represented as follows:—

On behalf of the Canadian Pacific Railway:

Mr. George Hodge, Assistant General Manager, Montreal, Quebec; Mr. A. Halkett, Superintendent, Moose Jaw Division, Moose Jaw, Saskatchewan; Mr. A. C. McKenzie, Engineer Maintenance of Way, Montreal, Quebec; Mr. W. S. Crabb, Superintendent, Smith Falls, Ontario.

On behalf of the Employees:

Mr. F. H. Hall, Vice-President of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Montreal, Quebec; W. A. Rowe, Montreal, Quebec; E. S. Peck, Ottawa, Ontario; C. L. Fisher, McAdam Junction, New Brunswick; J. L. Pateman, Winnipeg, Manitoba; J. Parkinson, Winnipeg, Manitoba, and J. J. Ratcliffe, Winnipeg, Manitoba.

The matters in dispute affected approximately 4,100 employees of the Canadian Pacific Railway Company, employed over their entire railroad system in Canada.

On the 10th day of May, A.D., 1926, on behalf of the above mentioned employees of the Western Lines, there was submitted to the Canadian Pacific Railway Company a proposal for changes in the rates of pay and working conditions. Negotiations took place between the parties, but no agreement was arrived at.

On the 14th day of June, A.D. 1926, on behalf of the above mentioned employees of the Eastern Lines, a proposal was made similar to that of the Western Lines and negotiations took place between the respective parties without any agreement resulting.

On the 25th day of October, A.D. 1926, an application was made by representatives of the Eastern Lines of the said Brotherhood for the appointment of a Board of Conciliation and Investigation, and on the 26th day of October, A.D. 1926, a similar application was made by the representatives of the Western Lines of the said Brotherhood. On the 9th day of November, A.D. 1926, the above applications were granted and a Board was established in accordance with the provisions of the Industrial Disputes Investigation Act to deal with both disputes. The employees recommended Mr. David Campbell, K.C., of Winnipeg, Manitoba, and the Canadian Pacific Railway Company, Mr. J. B. Coyne, K.C., Winnipeg, Manitoba, as members of the Board.

These having been appointed members of the Board and having failed to recommend a person willing and ready to act as third member, Mr. D. R. C. MacLean, of Winnipeg, Manitoba, was, on the 2nd day of December, A.D., 1926, in pursuance of the provisions of the said Act, appointed such third member and Chairman.

A considerable amount of evidence, argument, and tabulated statements, bearing on the question of wages, were introduced by the parties, and at the conclusion of these the Board decided to accede to the expressed desires of the parties to give a decision upon the question of wages on the assurance of both parties that, if this were done, they would have no difficulty in reaching a settlement on all other matters in dispute.

The Board therefore took time to deliberate on the matter of an increase in wages and decided (the employer's representative dissenting) that an increase of four cents an hour to hourly rated employees and an equivalent increase to monthly rated employees be made at this time. The question of wages will be presently dealt with more fully.

On Saturday, the 18th December, A.D., 1926, the Board advised the parties of its decision and recommendation on the question of wages, and the parties then arranged to proceed with negotiations upon the numerous rules in the schedule of working conditions and the Board adjourned to allow these negotiations to proceed. We are pleased to report that these negotiations resulted in an agreement covering all matters in dispute with the exception of wages. We should like to have attached a copy of this agreement to our report, but we have yielded to the desire of both parties that this should not be done.

With reference to the question of wages, ample opportunity was given the parties to present fully their respective cases and the proceedings throughout were conducted in harmony and good-will by all parties concerned.

The employees of both the Eastern and Western Lines ask for an increase of ten

cents per hour for employees engaged on an hourly basis, and $20.40 per month for employees engaged on a monthly basis, and the company take the stand that no increase was justified at the present time.

Among the arguments advanced by the employees in support of their demands are the following:—

1. That prior to 1918 the basic rates of pay for this class of employee were arbitrarily fixed by the Company. That all revisions of rates of pay since then have been made on the basis of these arbitrarily fixed rates. If the basic rate of pay had been (which is not the case) established on a cost of living basis, these revisions based on the rising and falling cost of living might have been claimed to be equitable, but not otherwise.

2. The need for more money to enable them to enjoy a fair standard of living. That although their work is of a routine nature, yet it requires experienced and reliable workers. In spite of this, they are the lowest paid class of railway employees with one exception, namely, the maintenance of way men.

3. That the nature of their employment makes it necessary for the great majority of them to live in large centres where the cost of living is at its highest level.

4. That other classes of employees in the Company's employ have been recently granted substantial increase in pay and that they should not be denied similar increases.

The main arguments advanced by the representatives of the Canadian Pacific Railway Company were:—

1. That, taking into consideration the substantial increases in wages which have come into effect in recent years, the cost of living, the substantial reductions in the revenue of the railways per unit of service and the financial position of the railways at the present time, the rates of pay are quite as high as they should be.

2. That the employees whose case is now before the Board have received advances in their rates of pay at a percentage ratio in excess of those received by many other classes of railway employees.

3. That since the existing rates of pay were established the cost of living has remained practically stationary, under-going only slight seasonal variations one way or the other, but that the Company has suffered substantial reductions in the rates they are permitted to charge the public for the handling of passenger and freight traffic.

4. The Company's inability to pay these increases and earn reasonable profits.

36732—2½

Among other the two following exhibits were filed by the employer:—

Exhibit 1 "A".—Rates of pay and rules governing service of clerks, checkers, freight handlers, baggagemen, etc., on Eastern Lines, effective the 1st day of February, A.D. 1924, and now in effect.

Exhibit 1 "A" shows that the following rates are in effect at the present time:—

Clerks with less than one year's experience	$55 00
Clerks with one year's experience and less than two years' experience	65 00
Clerks with two years' experience and less than three years' experience	75 00
Clerks with over three years' experience	87 50
Car markers and checkers with less than six months' experience	55 00
Car markers and checkers with over six months' experience and less than twelve months, $30 less than schedule rate, taking the schedule rate of $87.50	57 50
Car markers and checkers with less than eighteen months' experience, $20 less than schedule, taking schedule rate at $87.50	67 50
Car markers and checkers with over eighteen months' experience and less than twenty-four months, $10 less than schedule	77 50
Car markers and checkers with over two years' experience	87 50

There is also a list of positions given in this exhibit to which special rates of wages are attached. About fifty per cent of these positions show a remuneration of less than $100 per month.

Exhibit 1 "B" shows the rates of wages paid employees in the Western Lines. Some of these rates are as follows:—

For clerks with less than one year's experience	$65 00
For clerks with over one year's experience and less than two years	75 00
For clerks with over two years' experience	87 50

The rates fixed for certain classes of employees would appear to be the following:—

	Per Hour
Stowers	50c.
Coopers	50c.
Loaders	49c.
Pilers	49c.
Sealers	48c.
Truckers	47c.

The remunerations attached to the positions set forth in the special list on the Western Lines are as a general rule slightly higher than the corresponding positions obtained in the Eastern Lines, but even here there are many specially listed positions where the wages are less than $100 per month.

With regard to these arguments, the Board finds as follows:—

The classes of employees asking for increase in their rates of pay are among the lowest paid of the Company. The services required of many of them are of a character that requires fair education, experience and training. While it is true that the rates of wages for these employees have been substantially increased since 1914, the increases have been given to them to correspond with the percentage increase in the cost of living. It seems unquestionable that the rates of pay in 1914 were based exclusively on the bargaining powers of the parties at that time, which operated heavily against this class of worker and apparently without reference to what might be considered fair compensation or a fair standard of living. Upon a close perusal of Exhibit 1 "A" and 1 "B" it is quite evident that a great many of these workers have been and are earning considerably less than $100 per month. Many of them live in large cities where the cost of living is high. It was shown that a large proportion were married and supporting families.

In view of these facts and after a careful review and consideration of all the evidence, statements, exhibits and arguments, we are of the opinion that the merits and substantial justice of the case demand that there should be at this time an increase granted to these employees of four cents per hour to hourly paid employees with an equivalent increase to monthly paid employees, and find accordingly.

All of which is respectfully submitted.

Dated at Winnipeg, Manitoba, this 12th day of February, A.D. 1927.

(Sgd.) D. R. C. MACLEAN,
Chairman.

(Sgd.) D. CAMPBELL,
Representing the Employees.

Minority Report

INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907

Board of Conciliation and Investigation between the Canadian Pacific Railway and its freight employees.

To the Honourable,
The Minister of Labour,
Ottawa, Ont.

SIR,—It is with regret that I find myself unable to concur with the other members of the Board respecting the scale of wages now enjoyed by these employees. In my opinion there is no justification for any increase at the present time for the following reasons:—

1. *The cost of living is lower.*

It is substantially lower than a year ago; and in comparison with the cost of living, wages are substantially higher than at the time of the peak wages and the peak cost of living in 1920. Even with materially shorter hours, these employees generally speaking receive about twice as much as before the war, though the cost of living has increased only by one-half, and the lower wholesale price index and lower price of important primary products indicate a still lower cost of living in 1927.

2. *The wages are higher than in other railway and non-railway service.*

These employees are already paid more than similar service receives in other branches of railway work or in general business throughout the country outside the railways, even in large centres where living costs are highest.

3. *Comparison with United States wages.*

While some other classes of railway workers receive less than is paid on United States railways, this class has received wage treatment quite equal to that of the same classes across the International Boundary, although the Canadian workers have a more favourable position in comparative cost of living than those in the United States.

4. *Railway revenues cannot stand a higher wage.*

While railway revenues have increased, they still fall short of what has been determined as a reasonable net return to the Canadian Pacific Railway by the tribunal established by law to determine just and reasonable rates, and the Canadian National Railways have scarcely sufficient operating surplus to pay their obligations held by the general public, let alone the interest on advances made by the Government.

The increase of wages suggested by the majority of the Board, if extended to all employees, would further deplete the net earnings of the Canadian Pacific Railway by $6,300,000, and if applied to Canadian National Railway employees would impose a much larger burden on that company.

5. *Rates rather than wages should be improved.*

Were there any justification for taking any such sums from the railways, they should be used for the benefit of the community at large in reducing railway rates rather than in accentuating the privileged position of railway workers and increasing the spread of their wages over those of employees doing similar work in other occupations, and applications are now be-

fore the Board of Railway Commissioners for reduced rates.

6. *Still higher standard of living not now practicable.*

Without attempting to controvert the correctness of the above facts and argument, the men substantially base their claim wholly on a demand for a higher standard of living; and this is answered by the improved standard of living brought about by the decreased cost of living as against the high wages uniformly maintained, and a further improved standard is not now practicable.

Prior to the war the wages of these employees were as high or higher than in the general market. The only justification which was put forth for the McAdoo Award of 1918 and the Chicago Award of 1920 was the increased and increasing cost of living, and, while the advance in wages largely exceeded the increase in the cost of living, the decrease in wages thereafter was only one-half the decrease in the cost of living (except for a decrease in wages in the fall of 1922 which lasted only for two months and a half). The men have, therefore, entirely shifted the basis of their claims in the last few years.

No more experience, education or capacity and reliability is required than in other services inside and outside the railway where lower wages prevail.

While boys enter the company's service at $55, it is a higher wage than such boys receive outside, and they may be still immature boys when they reach the schedule minimum rate of $87.50 per month or $1,000 per year.

A large portion of these employees are truckers, receiving 47c. or 48c. per hour, or $1,150 to $1,175 per year, or almost $100 per month. In addition to continuous employment, they have before them the opportunity of advancement to checkers with larger remuneration, the latter being almost entirely recruited from the truckers, and the checkers numbering one-third of the number of the truckers. If they have the capacity they have the opportunity of working into clerical and book-keeping positions, and in these, schedule positions run over $150 per month, with even better paid positions outside the schedule.

Wages cannot, of course, be based on whether the employee is married or single, but in any event no evidence was given as to how many of these employees were married, nor was any evidence offered to the Board to show that these wages now paid and prevailing for the last four years do not give a sufficient living wage, and the contrary is amply sustained.

Contrast may properly be made between the advantages and high wages enjoyed by these workers as compared with the largest class of our population, the farmers, who for the past two months have been receiving 18c. to 30c. less per bushel of No. 1 wheat than a year ago.

Everyone would like to see his fellow men enjoying a higher standard of living—and the highest possible. But this improvement should be uniform in the same class of labour, and it should not exalt one branch of labour in one limited class of industry and put them on a pinnacle of wages substantially above the others. And the present spread of railway wages over those paid for similar work outside should not be increased at the expense of the rest of the community and the consequent lowering of the comparative standard of others, particularly of those doing similar work.

I am therefore of the opinion that the merits and substantial justice of the case require that there be no increase under existing conditions in the wages paid to these employees.

(Sgd.) J. B. Coyne.

Rural Mail Carriers' Demands

A delegation representing the Association of Rural Mail Carriers of Canada laid the following requests before the Dominion Government during March:—

1. Abolition of the contract system and the introduction in its place of a salary-paid system, where the members of the association will be placed on a permanent salary basis of engagement at the rate of $70 per mile per year for the rural mail contractors and the contractors operating between post offices and post offices.

2. An increase for the contractors operating between post offices and railway stations of three times the present contract price, these contracts representing a very short distance and a very trifling income—one entirely inadequate for the responsibility of the work performed.

3. That the permanency of occupation on a salary-paid system at the above-mentioned rates of increase will be continuous to the carrier, consequent upon good service being rendered, and where, when the carrier so desires, two months will be considered sufficient notice to terminate his engagement.

STRIKES AND LOCKOUTS IN CANADA DURING FEBRUARY, 1927

THE number of strikes and lockouts in existence during February was eleven, as compared with eight during the preceding month. The time loss for the month was less than during February, 1926, being 7,190 working days, as compared with 21,730 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Feb., 1927	11	402	7,190
Jan., 1927	8	261	4,020
Feb., 1926	10	2,450	21,730

The Record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Seven disputes, involving 100 workpeople, were carried over from January, and four disputes commenced during February. One of the disputes recorded as being carried over from January, the strike of structural steel workers at Calgary, Alberta, commencing January 19, 1927, was not reported to the Department in time for inclusion in the February issue of the LABOUR GAZETTE. One of the strikes commencing prior to February terminated during the month and one strike which commenced during February terminated during the month. At the end of the month, therefore, there were on record nine strikes and lockouts, as follows: Fur workers, Winnipeg, Man.; ladies' clothing factory workers, Toronto, Ont.; men's clothing factory workers, Montreal, P.Q.; cap makers, Toronto, Ont.; electrotypers, Toronto, Ont.; structural steel workers, Calgary, Alberta; men's clothing factory workers, St. Hyacinthe, P.Q.; upholsterers, Kitchener, Ont., and laundry workers, Ottawa, Ont.

The record does not include minor disputes as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to three such disputes, namely: moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, P.Q., March 24, 1925; and metal polishers at Sackville, N.B., March 15, 1921.

One of the strikes which commenced during February was for higher wages, shorter hours and recognition of union; one against a reduction in piece rates; one for an increase in wages, and one against changes in working conditions. One of the strikes which terminated during the month was in favour of the employer and one resulted in a compromise.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, TORONTO, ONT.—This strike, commencing on September 25, 1926, for recognition of the union and a signed agreement stipulating union wages and working conditions, was called off by the union on February 22, 1927. Out of sixty-four employees involved at the beginning, at the end of January there were still fifty involved in the dispute and on the strike benefit list of the union, the others having secured employment elsewhere. The employer agreed to take back some of the employees immediately and others as he had work for them.

ELECTROTYPERS, TORONTO, ONT.—In connection with this dispute, which commenced on December 20, 1926, owing to the refusal of the employer to renew the union agreement and the discharge of certain union employees, it has been reported that one of the strikers returned to work.

STRUCTURAL STEEL WORKERS, CALGARY, ALBERTA.—This dispute, commencing January 19, was not reported to the Department in time for publication in the February issue of the LABOUR GAZETTE. It appears that the employer brought workmen from another province, but as these did not belong to the union, the Calgary local called out on strike its members, not allowing them to work with non-union employees.

MEN'S CLOTHING FACTORY WORKERS, ST. HYACINTHE, P.Q.—A dispute had been in progress between the proprietors of this establish-

ment and the Amalgamated Clothing Workers of America since March 19, 1926, in the city of Montreal. The establishment was moved to St. Hyacinthe shortly after that date. From time to time it has been reported that organizers of the union had attempted to induce employees of the firm to join the union, but in January, when a dispute involving most of the men's clothing manufacturers in Montreal had resulted in union agreements being signed in most cases, organizers of the union succeeded in organizing some of the employees in St. Hyacinthe and about 150 ceased work on February 7, 1927. During the month attempts to settle the dispute were made, the Mayor offering to mediate, but the dispute was unterminated at the end of the month. The employer reported that he had dispensed with the services of the contractors to whom he had been giving out work and who were involved in the dispute and was employing workers directly in the factory.

UPHOLSTERERS, KITCHENER, ONT.—This strike occurred on February 4 against a reduction in wages, piece rates, in connection with the introduction of a system of time study for setting piece work rates. On February 10 the striking employees it has been reported, took out their tools and secured the wages due and

STRIKES AND LOCKOUTS DURING FEBRUARY, 1927.

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to February, 1927.			
MANUFACTURING—			
Fur and leather products (other than boots and shoes)			
Fur workers, Winnipeg, Man.	.....	.....	Commenced Sept. 25, 1926, for shorter hours and recognition of union. Employees secured work elsewhere.
Clothing (including knitted goods)—			
*Ladies' clothing factory workers, Toronto, Ont.	5	120	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing factory workers, Montreal, P.Q.	25	600	Commenced July 28, 1926, for union wages and working conditions in non-union shops. Unterminated.
Cap makers, Toronto, Ont.....	5	120	Commenced Aug. 27, 1926, for employment of union members only. Unterminated.
Men's clothing factory workers Toronto, Ont.	50	900	Commenced Sept. 25, 1926, for recognition of union. Terminated Feb. 22 in favour of employer.
Printing and Publishing—			
Electrotypers, Toronto, Ont..	7	168	Commenced Dec. 20, 1926, against discharge of employees for union activity. Unterminated.
CONSTRUCTION—			
Highway and Bridge Construction—			
Structural steel workers, Calgary, Alberta.	8	192	Commenced Jan. 19, 1927, for employment of union members only. Unterminated.
(b) Strikes and lockouts commencing during February, 1927.			
MANUFACTURING—			
Clothing (including knitted goods)—			
Men's clothing factory workers, St. Hyacinthe, P.Q.	150	2,850	Work ceased Feb. 7, 1927, for higher wages, shorter hours, and recognition of union. Dispute in progress since Mar. 19, 1926. Unterminated.
Wood products—			
Upholsterers, Kitchener, Ont.	7	250	Commenced Feb. 4, 1927, against reduction in wages, piece rates. Unterminated.
CONSTRUCTION—			
Buildings and Structures—			
Painters, Victoria, B.C.....	100	1,400	Commenced Feb. 1, 1927, for increase in wages. Terminated Feb. 16, in a compromise.
SERVICE—			
Personal—			
Laundry workers, Ottawa, Ont.	45	590	Commenced Feb. 14, 1927, against changes in working conditions. Unterminated.

*Reports indicate that the strikers have been replaced, but there are still a number of employees out and on the strike benefit list of the union.

the employer took on other workers. It has been reported also that upholstering work was sent out to other establishments.

PAINTERS, PAPERHANGERS AND DECORATORS, VICTORIA, B.C.—This dispute, beginning February 1, was due to a demand by the union for an increase in wages from 70c. per hour to 80c. Work was resumed on February 16, all the firms concerned except one having agreed to pay 75c. per hour. In the case of the firm not agreeing to the increase it has been reported that the employees returned to work at 70c. per hour.

LAUNDRY WORKERS, OTTAWA, ONT.—This dispute, causing a cessation of work on February 14, arose out of a proposal of the employer to amend the agreement in force with the union to provide for wages and hours similar to those in other laundries in the city. The proposed amendments were refused, the employees applying for a Board of Conciliation under the Industrial Disputes Investigation Act, 1907. As the employer refused to join the application, the Board could not be established under this statute. Various attempts at mediation were made by the officers of the Department of Labour and the officers of labour organizations, but were not successful, The employer notified the employees that the union would no longer be recognized and that after Saturday, February 12, the company would deal individually with those who wished employment. About 45 employees out of approximately 60 did not report for work on Monday, alleging a lockout and violation of the agreement. A few days after the strike occurred the strikers were partially replaced and some of them returned to work and later the employer stated that conditions were not very much affected. At the end of the month the union reported thirty employees still involved, some having obtained work elsewhere.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

IN the LABOUR GAZETTE for February, 1927, in an addendum to the review of strikes and lockouts in Canada during 1926, there was given a table summarizing the principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available, and in each subsequent issue later information available is given. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent date.

Great Britain and Northern Ireland

The British *Ministry of Labour Gazette*, February, 1927, publishes revised figures for December, 1926. The total number of disputes in progress was 19, involving 464,000 workpeople with an aggregate duration of 3,176,000 working days. These include 450,000 workpeople in the coal mining industry who had not at the beginning of December returned to work after the stoppage beginning in May. During December the dispute was terminated in all remaining districts, and after that month, any coal miners who were not yet at work are considered as unemployed. The time loss due to that dispute was over 3,000,000 working days in December.

In January, according to preliminary figures published in February, the number of new disputes was 28, involving (directly and indirectly) 9,100 workpeople. In addition 8 disputes involving 6,200 workpeople were carried over from the previous month, so that there were 36 disputes involving 15,300 workpeople in progress during the month. The time loss for these disputes was 130,000 working days.

The principal disputes in January were four disputes in coal mines, which together involved about 7,000 miners. Three of these were against reduction in wages offered at the termination of the national stoppage and two were settled within a few days. The third had not been settled at the end of January. The fourth dispute was over working conditions and was terminated after a few days.

Of the 28 disputes beginning in January, 13 were caused by questions as to wages, 8 by questions as to employment of particular classes or persons, 4 by Trade Union questions and 3 by other causes.

Of the 23 disputes settled in January, 6 were in favour of workpeople, 10 in favour of employers and 7 were compromised.

United States

In the *Monthly Labour Review*, February, 1927, 37 disputes are reported as beginning in December, 1926 as compared with 51 in the previous month. The number of employees involved is reported only for 23 of these disputes and is 9,712, making the average number of employees per dispute 422. Of the 37 dis-

putes, 10 were in building trades, 7 in coal mines and 6 in the clothing industry.

The strike of textile workers in Passaic New Jersey, which began January 25, 1926, and originally involved from 8,000 to 12,000 workers was still in progress during December. About half of the strikers, however, had returned to work at certain of the factories where settlements were reached.

The strike of paper-box makers in New York City was still pending. This strike began October 5, for a 44-hour week and increase in wages, and the number of strikers was from 2,000 to 4,000 according to various reports.

A successful strike of 5,000 members of the Hebrew Butcher Workers Union in New York City occurred in December, and was terminated January 4, 1927, when an increase in the minimum wage scale from $40 to $43 was granted.

Belgium

In December, 1926, 7 strikes and one lockout began in Belgium, which together with 8 strikes begun previously make a total of 16 disputes in progress during the month. The number of workpeople involved was 9,340 and the time loss 83,072 working days. The most important dispute was a general lockout in the diamond cutting industry at Antwerp in which 6,200 workpeople were involved when the Employers' Association refused to grant the increases in wages demanded. Work was resumed after a week and a compromise reached, granting certain increases.

Finland

In December, 1926, 2 new disputes involving 225 workpeople occurred and these with the 5 disputes carried over from the previous month, make a total of 7 strikes in progress during the month, involving 676 workpeople.

Poland

Figures for the 2nd quarter of 1926 show that 152 industrial disputes began in this period, directly involving 39,424 workpeople and causing a time loss of 244,880 working days.

Italian Trade Union Reform Act

A recent issue of *Industrial and Labour Information* contained a summary of the regulations issued by the Italian Government for the administration of the statute which has recently been adopted in that country for the "legal regulation of collective relations in connection with employment."

This Act, which might be called shortly a Trade Union Reform Act, deals with three main questions: (1) The legal recognition of trade associations and of collective contracts of employment; (2) jurisdiction in disputes connected with employment; and (3) prohibition of lockouts and strikes. At the time of its introduction, towards the end of last year, the Bill attracted a considerable amount of public attention, both in Italy and elsewhere, owing to the fact that it embodied a new principle—the recognition of a single trade union for each class of employers or workers—and also contained provisions for the settlement of disputes by industrial courts and, as a corrollary, for the prohibition of stoppages of work. Equal interest attaches to the regulations now issued, which fill in the details of the scheme laid down in the Act.

According to a proclamation issued by Mr. Mussolini, the issue of these regulations marks the completion of the corporate organization of the State—the achievement of "a constructive revolution, carried out peacefully, in the sphere of production and labour, involving the grouping of all the economic and intellectual forces of the nation for their direction towards a common end." Not less interesting is the announcement of the issue of a Royal Decree for the creation of a Ministry of Corporation, to supervise the enforcement of the Act and the regulations, and the establishment of a National Congress of Corporations to act in an advisory capacity with regard to trade union affairs. Mr. Mussolini himself has been appointed head of this new Department.

The Countess of Warwick has withdrawn her offer to the Trades Union Congress of her estate, Easton Lodge, at Dunmow, Essex, for use as a labour college. The proposal was noted in the Labour Gazette, February, 1926, page 151. The Congress, at its last meeting, failed to take any action in regard to the offer, and a proposal that a small *per capita* levy should be made on the members in order to raise the £50,000 required to establish the college, was defeated (Labour Gazette, October, 1926, page 978).

OLD AGE PENSION BILL BEFORE PARLIAMENT OF CANADA

Minister of Labour Outlines Provisions of Government Measure

IN the House of Commons on February 15, the Hon. Peter Heenan, Minister of Labour, moved that the House go into committee to consider the following proposed government resolution:—

Resolved, that it is expedient to bring in a measure respecting old age pensions, and to provide,—

1. That the Governor in Council may make an agreement with the Lieutenant-Governor in Council of any province for the payment to such province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by such province for pensions pursuant to a provincial statute authorizing and providing for the payment of such pensions to the persons and under the conditions hereinafter specified and regulations made under the proposed legislation.

2. That every agreement so made shall continue in force so long as the provincial statute remains in operation or until after the expiration of ten years from the date upon which notice of an intention to determine the agreement is given by the Governor General to the Lieutenant-Governor of the province with which the same was made.

3. That before any agreement so made comes into operation, the Governor in Council shall approve the scheme for the administration of pensions proposed to be adopted by the province, and no change in such scheme shall be made by the province without the consent of the Governor in Council.

4. That all sums payable to any province in pursuance of any such agreement shall be payable from time to time on the certificate of the Minister of Finance out of any moneys belonging to the consolidated revenue fund of Canada not otherwise appropriated.

5. That provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—

(a) is a British subject, or, being a widow, was such before her marriage;
(b) has attained the age of seventy years;
(c) has resided in Canada for the twenty years immediately preceding the date aforesaid;
(d) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;
(e) is not an Indian as defined by the Indian Act;
(f) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

6. That the receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

7. That the maximum pension payable shall be two hundred and forty dollars yearly, which shall be subject to reduction by the amount of the income of the pensioner in excess of one hundred and twenty-five dollars a year.

8. That provisions be made as to the credit to the pension authority of the annual value of a pensioners' residence, and the recovery of pension payments out of deceased pensioner's estate, and for the distribution of pension burden among provinces by proportionate reimbursement or proportionate reduction where the pensioner resided in more than one province or transfers his permanent residence to another province, and for ceasing of payments where he transfers his residence to some place out of Canada, and the revival of his rights upon again becoming a resident of Canada.

9. That no pension shall be subject to alienation or transfer by the pensioner, or to seizure in satisfaction of any claim against him.

10. That on or before the thirtieth day of April in each year, the Minister of Finance shall make a full report to parliament of the operation of the agreements made pursuant to the proposed act, and of the moneys of Canada paid to the provinces under each of the several agreements entered into pursuant thereto.

11. That the Governor in Council shall have power from time to time, on the recommendation of the Minister of Labour, and with the approval of the Treasury board, to make regulations, not inconsistent with the provisions of the proposed act, with regard to the pensions herein provided for, and such regulations shall be published in the Canada Gazette, and be laid before parliament.

Statement by Minister of Labour

Mr. Heenan said: We will discuss the details when the bill is before the committee. From the information we have in the Department of Labour we find that there are many schemes of old age pensions, about twenty-eight in fact, some providing for pensions at the age of seventy, others at sixty-five, others again at sixty, while in other cases no age is specified; and others provide for a diminution of pensions if the pensioner has an income or is possessed of property. In other words, it appears that old age pensions have been adopted in various countries to meet the conditions peculiar to those places.

In this country the subject of old age pensions has been under consideration for the past twenty years. In 1906 a resolution was introduced to deal with the matter, and again in 1908, in 1912 and in 1913, resolutions were introduced calling for the appointment of special committees to consider the advisability of adopting an old age pensions plan. In 1908 a law was passed authorizing the sale of annuities for old age. That was the first practical movement in the direction of old age pensions ever made in Canada. In 1914 a resolution in favour of an old age pension system for this country was moved in the House, but the debate was not concluded. In 1922 the House of Commons adopted a resolution introduced by the member for Hull declaring that in its opinion the federal government should consider the advisability of devising ways and

means of establishing a system of old age pensions in Canada. In 1924 a special committee of the House was appointed on motion of the Prime Minister to inquire into an old age pensions scheme for Canada. That committee reported on July 1, 1924, submitting the following recommendations:—

1. That an old age pension system be established at the earliest possible date for deserving indigent persons of seventy years of age and upwards.
2. That applicants for pension must be British subjects of at least twenty years' residence in Canada, or naturalized subjects of at least fifteen years' naturalization and twenty-five years' residence.
3. That the maximum rate of pension be twenty dollars per month, which will be lessened by private income or partial ability to earn.
4. That one-half of the amount of the pension payable be borne by the federal government; the other half, by the provincial governments of such provinces as express by legislation their desire to adopt the system—the cost of administration to be borne by the provincial governments.

The report of the committee was communicated to the provinces to ascertain their views in the matter. At the session of 1925 the committee was reappointed, and the correspondence between the various provinces was submitted to it for consideration. After careful deliberation, and having obtained advice from the Department of Justice, the committee again favoured the adoption of a co-operative system of old age pensions. The chairman of the committee in moving the adoption of its report on June 18, 1925, in the course of his remarks said:—

This government has taken the initial step and we hope the matter will be proceeded with and prosecuted until it arrives at a successful conclusion in a co-operative movement between the federal government and the provincial governments.

As hon. members are aware, the government last session introduced a bill along the lines recommended by that committee, and it is practically the same measure I have the honour to introduce at this time. The bill introduced last year passed this House, as hon. gentlemen no doubt know.

In view of the fact that representations have been made from some quarters urging that a different system be adopted, that is to say, a purely federal scheme, and one which my hon. friend on behalf of the Conservative party now also advocates, I desire to call the attention of the House to the fact that when the resolution to concur in the recommendations of the committee was before the House in 1925, the committee having suggested a co-operative plan, an amendment was moved that the report be referred back to the committee with instructions to consider and report again upon a purely federal scheme. That amendment was voted down by 139 to 17 in this chamber. There is no question therefore that the decision of the House at that time was against a purely federal system. As I have already said, the House during the last session passed the bill, but it was subsequently defeated in the Senate and consequently did not become law.

During the last election campaign the question of old age pensions was one of the matters which were most prominently before the electorate of Canada. One could hardly read a newspaper during that campaign without noting some reference to the desirability of establishing a system of old age pensions in this country. If we are to interpret the will of the electorate on that question in the way we usually interpret electoral decisions, there can be no question that the principle adopted in this bill was endorsed by the people of Canada.

During the debate last session some members advocated a contributory system. I believe the hon. member for West Calgary (Mr. Bennett) was one of those who espoused that scheme. But as the Prime Minister (Mr. Mackenzie King) pointed out at that time, practically every scheme of old age pensions in existence to-day began upon a non-contributory basis. They were all initiated at first as purely non-contributory plans. Like the Prime Minister, I feel that if we were establishing an old age pensions scheme with our younger people in view, I should myself be inclined to the contributory system. But having in mind the fact that we are facing a practical problem, and that we are legislating for our old pioneers, indigents, if you will, who have been unable through lack of opportunity or by reason of misfortune to provide for themselves, I think that the plan we are now proposing is the best one, at least for the time being. At the same time I hope to see the annuity system developed into a broad scheme of social insurance. Of course it will be on a contributory plan, and I am hoping that it will also be in co-operation with the provinces. I have given a good deal of study and thought to the extension of the annuity system, and I see great prospects ahead for that scheme.

It has just been argued by the leader of the opposition that the provinces may not come into the scheme on a co-operative basis, and one of the reasons given is that it would be too expensive; the province of Nova Scotia was taken as an example. I am afraid those supporting that view have not considered the fact that the provinces and the

municipalities bear the entire burden now, and by this legislation we are attempting to lighten that load by offering to contribute one-half of the cost. If we do it in co-operation with the provinces we will be using the machinery already in existence. I want to point out just what the establishment of a federal old age pension plan might cost, considering administration only. I sent telegrams to several of the provincial premiers, to which I have received two replies. I asked the cost of administering the Workmen's Compensation Act and the Mothers' Allowance Act and I will give the House the replies received from Ontario and British Columbia. For the last full year in Ontario the cost of administering the Workmen's Compensation Act was $277,936.16, and the cost of administering the Mothers' Allowance Act $73,516.73, or a total for Ontario of $351,452.89. In British Columbia the administration of the Workmen's Compensation Act cost $104,980 and the Mothers' Allowance Act $16,048, or practically half a million dollars for these two Acts in the two provinces. We would practically duplicate that expenditure if we set up a federal scheme of this kind, so is it not better to work in co-operation with the provinces in order to lessen the cost of administration by using their own machinery?

I think there can be no question of the necessity for an old age pension scheme for indigents; for proof of that we have only to look about us. Right here in Ottawa the city is at present taking care of 641 people, many of whom do not belong here, which is one of the difficulties all through the country in relief work. Men become indigent and come into towns and cities for relief; the municipalities often feel that they are overburdened with their own indigents, and try to evade the responsibility of taking care of the outsiders. In that way the burden is not shared equally, nor are the people treated in the same way.

I am sure that if hon. members will only think it over they will realize that we should give a better assurance to the older people, the pioneers of this country who have not been so fortunate as some of the rest of us, that in their declining years we will not throw them on the scrap heap. Old age and poverty combined plead their own case; there is no necessity for anyone to advocate their cause, but I feel that we should not evade our responsibility by saying that we would prefer another Act and therefore will not support this scheme.

This bill passed the House last session after a great deal of discussion, but was defeated in the Senate. Subsequently it went out to the electors during the last campaign, and if there was one question discussed more than another, even more than the customs scandal, it was the old age pension scheme. I contend that the principle of this bill has been endorsed by the people. To those who still think that the provinces may not co-operate let me say that when other schemes of a co-operative nature were under consideration here it was predicted that the provinces would not participate in them, yet now we have some five or six co-operative schemes in force calling for an expenditure by this government of over $65,000,000. Just last week we had representatives of the different provinces asking that we extend our activity in connection with one of these schemes. Nova Scotia was represented, and I cannot believe that Nova Scotia would have any less regard for humanity than for its progress along material lines.

The argument advanced by my hon. friend on behalf of Nova Scotia seems to be taken from other arguments advanced in another chamber during last session, and I do not think the people of Nova Scotia would agree that over forty per cent of those over seventy years of age are indigent and unable to take care of themselves. That is a guess, as many other things which have been said in this chamber are guesses. What we should do is pass a bill and get it in working order, and then we can amend it according to the experience gained from practical knowledge.

When the workmen's compensation acts were introduced, many of us thought the compensation was not sufficient, and many protests against the pittances, as they were called, were made. But some of us in the front row were fighting to get the principle established, and one of the things I would like to see established in the interests of the working men of this country now is an old age pension bill. Let us get it into working order and then it can be amended as was done with the Mothers' Allowance Act, the Minimum Wage Act for women and girls and the Workmen's Compensation Act. Now, as I say, British Columbia has not only intimated its approval in correspondence from the Prime Minister, but a bill was introduced at this session of the legislature providing for the making of an agreement between the government of that province and the federal government. So that we have made a start along the right line.

Having given a great deal of thought and study to the subject, and having taken every possible factor into consideration, I think we should adopt this measure, and the principle

contained in it, as best suited to the needs of the country at the present moment The bill will accomplish what it is intended to do. It will assist those in need who are over seventy years of age and have not been able to provide for themselves in their declining years.

I should like to see all the members of the House range themselves unitedly behind this bill. Then we could impress everybody outside parliament who may have to deal with the subject in a legislative way that we are united in the matter. It will be a cue upon which they can act so that the law will be applied throughout the whole of Canada. After the measure has gone into effect and we find that any amendment is necessary, and the country is willing to support the obligation the change may involve, we can amend it just as we have amended other measures in the light of practical experience.

Bill passed in House of Commons

The debate on the bill in the House of Commons indicated general approval of the principle of old age pensions. Various suggestions, however, were made in committee for enlarging its scope or otherwise changing its provisions, the chief of these being that old age pensions should be a purely federal undertaking, and that the amount of the pensions should be increased. The position of the Government in regard to these proposals is indicated in the speech by the Minister of Labour, the committee being asked to make no changes that might jeopardize the passage of the measure through the Senate.

The motion to adopt the government resolution was agreed to on February 18, and on the same date the Old Age Pension Bill, incorporating the principles set forth therein, received its first and second readings. The bill was considered in committee of the House on March 3-4, and on March 4 it was read the third time and passed.

The debate on the measure in the Senate will be outlined in the next issue.

MINIMUM WAGES FOR WOMEN IN QUEBEC

Issue of Order Number 2, Governing Laundries, etc., Outside Montreal District

THE Minimum Wage Board of the Province of Quebec recently issued Order No. 2, governing laundries, dye works, and dry-cleaning establishments of the Province with the exception of the City and Island of Montreal and a radius of ten miles around and beyond the Island. (The text of the first order, which governs the same industry in Montreal and adjoining district, was given in the LABOUR GAZETTE, December, 1926, page 1195). Order No. 1 took effect on March 1, 1927, and Order No. 2 will become effective on April 16, 1927.

The following table shows the minimum rates of wages for various classes of employees in the province as fixed by Order No. 1 and Order No. 2.

MINIMUM WAGE RATES FOR FEMALE EMPLOYEES IN LAUNDRIES, DYEWORKS, ETC., IN THE PROVINCE OF QUEBEC

Class of Workers	Order No. 1 Montreal City and District	Order No. 2 Rest of Province
	per week	per week
Experienced workers	$12 00	$9 00
Inexperienced workers over 18 years		
6 months at	10 00	7 00
6 months at	11 00	8 00
Apprentices under 18 years—		
6 months at	9 00	6 00
6 months at	10 00	7 00
6 months at	11 00	8 00

The length of the working period to which these minimum rates apply is defined as being the "regular recognized working period of the establishment." The same rules and conditions are attached to both orders as follows:

No worker, who begins as a young girl shall, after reaching the age of 18 years, receive less than the wages prescribed for an inexperienced worker over 18 years. If she has been employed in the industry for a year or more before reaching the age of 18 years, she shall be considered an experienced worker upon reaching the age of 18 years and receive not less than the minimum wage of experienced workers.

Maximum of Inexperienced Workers.—Not more than 35 per cent of the total of female employees in any establishment shall be either inexperienced adults or apprentices under 18 years of age.

Overtime.—Any female employee doing work in excess of the regular recognized working period of the establishment shall be paid for same at not less than the regular rates.

Lost Time.—Any female employee losing time during the regular recognized working period of the establishment will be paid proportionately for the actual number of hours worked.

Deductions for Absence.—No deduction below the minimum wage line for absence shall exceed the value of the time lost, reckoned proportionately to the regular recognized working period of the establishment.

Waiting.—An employee required to wait on the premises shall be paid for the time thus spent.

Permits.—The Board may issue permits for lower wages on behalf of aged, or handicapped workers. It may also grant permits of variation or suspension of any of these regulations in case of exceptional conditions. Employers and employees are invited to consult the Board regarding any problems which this Order may concern.

Penalties.—Any violation of this Order is punishable by fine (i.e., up to $50).

Posting.—Each establishment shall keep a copy of this Order posted in a conspicuous place.

This Order is subject to annual revision by the Board.

WORKMEN'S COMPENSATION IN THE PROVINCE OF QUEBEC

New Act to be Effective on April 1

THE Workmen's Compensation Act, 1926, of the province of Quebec (Statutes, 1926, chapter 32), will take effect on April 1, 1927. The provisions of the new act were outlined in the LABOUR GAZETTE, April, 1926, page 324, in a review of the work of the session of the legislature last year. The recommendations of the commission appointed under an act passed at the session of 1922 to study the subject of workmen's compensation, which recommendations formed the basis of the new legislation, were outlined in the issue for February, 1925, together with the proposals of the labour representatives on the commission. The text of the new act is given below:—

AN ACT TO REVISE AND CONSOLIDATE THE WORKMEN'S COMPENSATION ACT

1. This Act may be cited as the Workmen's Compensation Act, 1926.

DIVISION I

Compensation

2. Accidents happening by reason of or in the course of their work, to apprentices, workmen and employees, engaged;

In the work of building; or in factories, manufactories or workshops;

In stone, wood or coal yards;

In lumbering operations, including the floating of timber;

In any transportation business by land or by water; or in loading or unloading;

In any gas or electrical industry;

In the business of building, repairing or maintenance of public roads, railways or tramways, waterworks, drains, sewers, dams, wharves, docks, elevators, bridges, or other similar work;

In mines or quarries;

In any industrial enterprise or yard, in which explosives are manufactured, used or kept, or in which machinery is used, moved by power other than that of men or animals, but only if such accident is caused by such machine or discharge of such explosives.

Shall entitle the injured person or his representatives to compensation as hereinafter determined.

3. The Government of the Province of Quebec and public and private corporation shall, on the same footing as individuals, be subject to these provisions whenever they come within one of the cases enumerated in Section 2.

These provisions shall apply likewise to commercial establishments, but only for accidents caused through an elevator, or machinery moved by power other than that of men or animals, to those in charge of same, or for accidents which happen in a worshop which is part of the enterprise.

4. A workman who usually works alone shall not be subject to liability under this Act from the fact of one or more other workmen casually working with him, or from the fact of the members of his family, who live with him habitually working with him.

This act shall not apply to agricultural industries, nor to navigation by means of sails, nor to domestic service.

5. 1. In the cases provided for in Section 2, the person injured shall be entitled:

(*a*) In case of total and permanent incapacity, to a life rent equal to two-thirds of his yearly wages;

(*b*) In case of permanent and partial incapacity, to a life rent equal to one-half of the sum by which his yearly wages have been reduced in consequence of the accident;

(*c*) After a permanent and partial incapacity, if the incapacity be aggravated by another accident, to a life rent equal to two-thirds of the sum by which his yearly wages are reduced by such aggravation.

These rents shall be due from the day on which the permanent nature of the incapacity is established;

2. In case of temporary incapacity, which has lasted less than seven days, to medical attendance;

If the temporary incapacity has lasted seven days or more, to an allowance equal to half his daily wages at the time, starting from the seventh day after the accident;

Such allowance shall be payable at the time and place where payment is usually made in the enterprise, but the intervals between payments shall not exceed sixteen days; it shall

not exceed twenty-five dollars a week nor be less than eight dollars (a week), save where the wages of the person injured are less than this, in which case it shall not exceed the amount of his daily wages.

3. When the accident results in death, a pension shall be paid, starting from the death, to the representatives, hereinafter designated, of the deceased in the order in which they are enumerated, and each degree excluding those following:

(*a*) To the surviving consort, not divorced nor separated from bed and board at the time of the death, provided the marriage took place before the accident, a life rental equal to twenty per cent of the yearly wages of the deceased.

If the deceased has left legitimate or legitimized children under sixteen years of age, the life rent to the consort shall be increased in the following proportions:

For one child, ten per cent of the yearly wages of the victim;

For two children, twenty per cent of the yearly wages of the victim;

For three children, thirty per cent of the yearly wages of the victim;

For four or more children, forty per cent of the yearly wages of the victim;

The rent shall be proportionally reduced as the children of the victim reach the full age of sixteen years.

In the event of re-marrying, the consort shall lose the right to his or her share of the rent, but shall continue to receive the portion allotted to the children.

Where the widow who is receiving a rent remarries, she shall receive a final allowance equal to the rents for twelve months.

(*b*) To each child who is without father and mother, a rent equal to twenty per cent of the yearly wages, until he reaches the full age of sixteen years, the total of such rents not to exceed sixty per cent of the yearly wages.

(*c*) If there be no consort surviving or children, qualified to receive under the preceding sub-paragraphs (*a*) and (*b*) each of the ascendants and descendants, of whom the deceased was the principal support, shall receive a rent, payable to the ascendants for life and to the descendants until the age of sixteen, equal to ten per cent of the yearly wages of the victim, the total amount of the rents so allowed not to exceed thirty per cent, and each rent as the case may be, being reduced proportionally.

6. Accidents which are provided for by this Act shall in addition entitle the injured person or his representatives, as the case may be:

1. For a period not to exceed six months, to all medical, surgical, pharmaceutical and hospital charges, according to a tariff approved by the Lieutenant-Governor in Council; as well as to the charges of transporting the injured persons to the nearest hospital. In the case where there is more than one hospital, the injured person may select one of his own choice.

2. To the supplying and normal renewing during the same period, of prosthetic and orthopedic appliances the use whereof is deemed necessary and

3. In cases of death, to the actual funeral expenses, but to the extent of one hundred dollars only.

The employer must procure for the injured person, whose mother tongue is French or English, the services of a physician and, if required, of nurses speaking his language. Should he fail to do so, the injured person may provide them himself at the expense of the employer. The employer and the head of the enterprise, or the insurance company, as the case may be, may be sued directly by the physicians and hospital establishments who have had the care of the injured person, but if there is no agreement to the contrary, only to the extent of the sums fixed by the tariff.

7. The rents, allowances and compensation due under this act shall be inalienable and exempt from seizure.

The rents shall be payable every thirty days and not in advance, at the domicile of the person entitled thereto, or at any other place in the province indicated by him.

8. The yearly wages upon which the rent is based shall be, in the case of a workman engaged in the business during the twelve months next before the accident, the actual remuneration allowed him during such time, whether in money or in kind.

In the case of a workman employed less than twelve months before the accident, such wages shall be the actual remuneration which he has received since he was employed in the enterprise, plus the average remuneration received by workmen of the same class during the time necessary to complete the twelve months.

If the work is not continuous, the year's wages shall be calculated both according to the remuneration received while the work went on, and according to the workman's earnings during the remainder of the year.

In the case where the workman receives a fixed wage, any remuneration he may have received for overtime shall not be taken into account in calculating his yearly wages.

The yearly wages to be considered in calculating the rent shall not be less than six hundred dollars, nor more than two thousand dollars.

9. The rents, allowances and compensation established by this act shall be at the charge of the injured person's immediate employer; but the head of the industry or enterprise for which such employer is acting as a contractor, sub-contractor, or otherwise, shall be jointly and severally liable with such employer, in favour of the injured person or his representatives, for the payment of such rents, allowances and compensation. If the judgment fixing a compensation is not complied with within fifteen days, the beneficiaries may sue the debtor's guarantee insurance company directly, to recover the amount of the judgment. The action taken against the insurance company shall be subject to a prescription of six months from the date of the judgment.

The head of the industry or enterprise, after having paid, may recover the amount so paid from the party responsible.

10. Every accident occasioning inability to work shall be reported to the Minister of Public Works and Labour by the employer or the authorized representatives of such employer within thirty days. This provision shall not apply to the Government of the Province of Quebec.

The report shall be in writing and contain all information required by the Minister.

Immediately after settlement of the compensation, the employer shall report in writing to the Minister and answer all the questions put in this connection.

Failure, without reasonable excuse, to make such reports shall render the employer liable to a fine of not less than twenty-five dollars and not more than one hundred dollars, payable to the Crown and recoverable in the usual manner with costs, and, in default of payment of the fine and costs, the employer, and in the case of a corporation, the president and the manager thereof, shall be liable to an imprisonment for not more than thirty days.

The fine and imprisonment may be repeatedly imposed until the party condemned has furnished the Minister with the required reports.

The injured person and the attendant physician may give a like notice.

10*a*. Notice of an accident shall be given to the employer within thirty days, by the injured person or his representatives and by the physicians who attended him.

In default of such notice, the person injured, his representatives and the physicians are deprived of their right of action, unless they prove that they have been prevented from giving such notice for reasons deemed sufficient by the judge or the Court.

11. With the exception of the Crown, public corporations and railways under the control of the Parliament of Canada, no one can engage in the enterprises, operations or business mentioned in articles 2 and 3 of this Act, without having previously obtained from a fixed premium or a mutual insurance company, approved by the Lieutenant-Governor in Council, a policy of insurance by which the insurer undertakes to perform the obligations imposed upon the insured by this Act, for any accidents of which his workmen or employees may be the victims by reason of or in the course of their work.

Such policy of insurance may, however, be replaced by a deposit in the office of the Minister of Public Works and Labour, or of the corporations, persons, or officers designated by Order in Council of a surety-bond, a sum of money or securities, or any other guarantee deemed sufficient to answer for the solvency of the person making such deposit and for the payment of the rents, allowances and compensation for which he may be liable under this Act.

The persons who fail to comply with the obligation imposed upon them by this section shall be liable to a fine of not less than five hundred dollars and not more than one thousand dollars, payable to the Crown, and recoverable in the usual manner with costs; and, in default of paying the fine imposed and the costs; the person in default, and, in the case of a corporation, the president and manager thereof shall be liable to an imprisonment of not less than eight days and not more than thirty days.

The fine and imprisonment may be repeatedly imposed until the party in default has complied with the provisions of this section.

12. The debtor may, at any time, free himself from the duty of effecting the rental payments for which he is liable, by paying the capital of such rents to an insurance company, approved by the Lieutenant-Governor in Council, which shall in his place undertake the duty of effecting the rental payments at a rate fixed by Order in Council.

When the capital of the rents does not exceed five hundred dollars, it shall be paid over to the injured person or to his representatives, and the payment of such capital shall free the debtor from the duty of effecting the rental payments.

13. 1. It is forbidden for employers, or owners of industries or enterprises to make any retention of any part of the salary or wages of their workmen or employees for purposes of insurance against accidents happening by reason of or in the course of their work, even with the consent of such workmen or employees.

2. Any agreement under which such a retention is made or authorized shall be null and of no effect.

3. In any case where such retention is made, the workman, apprentice or employee, in the three months following the termination of his contract of employment, may recover, before any court of competent jurisdiction, the amount so unlawfully withheld from his salary or wages.

Subsections 1, 2, and 3 of this section shall not apply to employees who individually and in good faith, take out supplementary policies of insurance and who give written orders to their employers to pay the premiums out of their wages or salaries.

Division II

Liability

14. Apart from the action granted under this Act, the injured person or his representatives shall retain, against the authors of the accident, other than the employer, his servants or agents, the right to claim compensation for the damage caused, in accordance with the rules of common law.

The compensation granted them shall free to that extent the employer and the owner of the industry or enterprise from the obligations put upon them. Such action against the third parties responsible may even be exercised by the employer and the owner of the industry or enterprise at their own risk, in the place and stead of the injured person or his representatives, if such injured person or representatives neglect to avail themselves of it, within a delay of fifteen days after being put in default in writing.

15. Damages resulting from accidents happening by reason of or in the course of the work shall only entitle, as against the employer and the owner of the industry or enterprise, the injured person or his representatives, in the cases provided for in this Act to the compensation which it fixes.

16. The injured person shall be bound, not oftener than once a month, at the expense of the employer, if the latter requires him so to do, in writing, to submit to an examination by a practising physician chosen and paid by the employer, and if he refuses to submit to such examination or opposes the same in any way, his right to rents, allowances and compensation as well as any remedy to enforce the same shall be suspended until the examination takes place.

The person injured, shall, in such case, always be entitled to demand that the examination shall take place in the presence of a physician chosen by him.

17. Every agreement contrary to the provisions of this Act shall be absolutely null.

Division III

Procedure

18. The Superior Court, the Circuit Court and the Magistrate's Court shall have jurisdiction in every action or contestation in virtue of this Act, in accordance with the jurisdiction given to them respectively, by the Code of Civil Procedure.

19. The fixing and recovery of the rents, allowances and compensation under this Act shall be effected notwithstanding article 117 of the Code of Civil Procedure, by a summary petition to one of the judges of the court of competent jurisdiction, whereof notice must be given to the adverse party at least six clear days before its presentation.

The judge before whom the parties appear shall have the widest powers respecting the fixing of the compensation provided by this Act, the summoning of witnesses and of any experts, as well as the taxation of all costs and the general conducting of the inquiry, and he may in particular:

(*a*) If he considers that no rights are prejudiced, render judgment immediately or

(*b*) Adjourn the case to a date which shall not be distant more than fifteen days, and shall then proceed, in or out of term, to hear and decide the matter summarily, and without having the evidence of witnesses taken in writing; or

(*c*) At the request of any party, if he considers that the ends of justice will be better served, refer the case to the Superior Court and order the issue of a writ in the usual manner. The proceedings on such writ are summary and subject to the provisions of the Code of Civil Procedure respecting summary matters;

(*d*) In any case, no more than one expert witness can be produced on each side, on the initiative of the parties; decisions rendered by the judge in virtue of the foregoing provisions shall have the same effect as a judgment of the court.

The defendant, unless he wishes to invoke questions of law and special facts, is not obliged to plead in writing to the petition, all the allegations whereof he is deemed to have denied.

One of the parties, in all cases, may exact the taking of the evidence in shorthand, but the expense thereof shall be borne by him.

Settlements, arrangements, compromises and payments effected without the sanction of the judge of the court, saving the case of paragraph 2 of section 5, and the cases of section 6, are null *de jure*.

20. The advocates and attorneys representing the injured person or his representatives shall be entitled, as well in appeal as in the court of first instance, to the taxable costs only, adjured against the opposing party; they cannot receive from their clients any retainer nor any fee or commission whatever, either directly or indirectly, arising out of the application of this Act, under pain of being guilty of contempt of court. They shall in addition be obliged to return all sums collected contrary to this prohibition.

21. Shall be null *de jure* and of no effect, all obligations contracted by the injured person or his representatives to remunerate the services of an intermediary who undertakes to secure to the said injured person, or to his representatives, the benefit of the provisions of this Act.

Sums paid contrary to this provision may be recovered before any court of competent jurisdiction.

22. Whenever the amount in dispute exceeds two hundred dollars, a final appeal shall lie, as to the question of law only, to the Court of Kin'g Bench, before five judges, from judgments of the judge or of the court of first instance.

The appeal shall be taken within fifteen days from the rendering of such judgment; such appeal shall be heard, with precedence over other cases, at the first sitting of the court after the inscription and without a printed factum or record.

23. The court of first instance or a judge of such court, may upon petition, at any stage of the case, whether before judgment or while an appeal is pending, grant a provisional weekly allowance to the person injured or to his representatives.

24. There shall, even in the cases provided for in section 28 hereunder, be no trial by jury in any action taken in virtue of this Act.

25. The petition to recover any compensation provided for under this Act shall, as against all persons, be subject to a prescription of one year from the date of the accident.

26. A petition to revise the amount of the compensation, based on the alleged aggravation or diminution of the disability of the person injured or upon his death as the result of the accident, may be taken during the two years next after the date of the final judgment.

27. This Act shall not do away with any of the common law rights of action belonging to any persons who cannot avail themselves of its provisions.

28. Cases begun under this Act, may if it be afterwards established that its provisions do not apply in the circumstances, be continued and adjudged as an ordinary action at common law provided that the petition be so drawn up to permit thereof; and, for such purpose, the judge or the court may allow all lawful amendments.

29. Workmen, apprentices and employees who are engaged in this province to go and work outside, or their representatives, shall not be entitled to the benefits of this Act if they are entitled to the compensation provided for under the law of the place where the accident occurred.

30. Employers to whom this Act does not apply may place themselves under its provisions, if they enter into a written agreement for such purpose with their apprentices, workmen and employees individually.

During the period agreed upon, the respective legal rights and obligations of the signatories of the said agreement with regard to accidents happening by reason of or in the course of the work shall be governed by these provisions to the exclusion of any other law.

31. This Act shall not apply to cases begun before the date of the coming into force of this Act, nor to accidents which happened before such date.

32. Chapters 274 and 275 of the Revised Statutes, 1925, are repealed.

33. This Act shall come into force on the first day of April, 1927.

REPORT OF MANITOBA BUREAU OF LABOUR FOR FISCAL YEAR ENDING APRIL 30, 1926

THE Department recently received the eleventh annual report of the Bureau of Labour of the Department of Public Works of Manitoba for the 12-months' period ended April 30, 1926. The duties assigned to the Bureau include the compilation and publication of statistics and information relating to labour, and the administration of the following acts: The Bureau of Labour Act; Manitoba Factories' Act; Bake Shops Act; Shops Regulation Act; Minimum Wage Act; Elevator and Hoist Act; Steam Boiler Act; Building Trades Protection Act; Public Buildings' Act; Fair Wage Act; Electricians' License Act; Public Amusements Act (the licensing of cinema projectors); Fires Prevention Act.

The expansion of the Bureau's work since its inception in 1915 appears in a chart, which shows that inspections carried out under the various acts have grown in number during this period from 1,154 to 16,277. Orders issued under the same acts numbered 6,681 in 1925-6. Most of the orders for improvement were connected with safety and health, while a few dealt with child labour. Special attention was given to the safe installation and safeguarding of all mechanical equipment. Seventeen violations of the child labour provisions were discovered during the year, occurring in furniture, bedding, garment, printing, woodworking and unclassified plants. Orders to remedy these unlawful conditions were complied with in every case. Five applications were made to the Bureau for permission to work during the school holidays, three being granted and two refused.

Minimum Wages.—The Minimum Wage Board held 24 meetings during the fiscal year. As several complaints had been received of inadequate wages being paid and excessive hours being worked in hotels, restaurants, etc., throughout the province, at Winnipeg Beach and other summer resorts, it was deemed advisable to revise the regulations for hotels and restaurants. Accordingly, regulation No. 5, covering employees in hotels, restaurants, clubs, victualling houses and refreshment stands in all portions of the province of Manitoba, became effective on January 18, 1926. Thirty-nine claims for wages were adjusted and collection of several hundred dollars effected by the Bureau without resorting to prosecution.

Thirteen prosecutions were undertaken during the year under the Minimum Wage order governing restaurants, and one under the Steam Boiler Act. A conviction was obtained in all these cases. Sixty-one complaints were received and adjusted by the Board during the year. Overtime permits were granted during the year to the number of 135.

Accidents.—The Bureau was notified of nine fatal accidents during the year, of which six were in factories, two in building, and one in connection with an elevator. Details are given of all these fatalities, showing the cause of each, as ascertained by the Bureau after investigation. In addition to these investigations, the Bureau complied with the request of the coroner, or of the Workmen's Compensation Board, to investigate four fatalities coming under legislation not administered by the Bureau. Special investigations were made into 197 industrial, 18 building, and nine elevator accidents. In all 4,115 accidents were reported to the Bureau during the year, of which 3,938 were industrial, 10 in connection with elevators, and 167 in building trades.

Accident Prevention and First Aid.—The report lays stress on the importance of safety work, and suggests an increase in the amount of the appropriations for this week. It says:—

"Serious as the economic effects for the community as a whole may be, far more serious are the sufferings of the victims themselves, and the benefits to humanity from safety work do not accrue to any one class of individual. Whilst the Bureau has accomplished much in this connection, it is felt that more time and attention should be given to this important subject, which involved two essential elements, i.e., safeguarding and education, both of which necessitates considerable detail work. Our appropriation for same is limited, but if additional funds could be procured, the Bureau would be in a position to carry on this work more effectively, particularly the educational features, i.e., by bulletin service and talks to the workmen and employers. Also the taking of photographs relative to accidents, illustrating the cause of same, which photos could be exhibited to both employees and employers, because it is a recognized fact that a large percentage of accidents occur through thoughtlessness and not deliberate carelessness, as some people would term it. There is no doubt whatever that the safety movement has come to stay. It is sweeping the whole civilized world, because it is making for the conservation of humanity. Safety work has a wide economic basis and every workman and employer from a standpoint of pure self-interest should do all in his power to attain the highest point of efficiency in this connection, because, after all, prevention is a benefaction whilst compensation is only an apology."

The need for first aid training and the placing of kits in industrial establishments is strongly recommended both as bringing immediate emergency relief, and as lessening

the risk of infected wounds. The report says:—

"We are convinced that 'first aid' is next in importance to the prevention of accidents; in fact, in some ways it is even of greater importance, because with all our efforts we can never hope to entirely eliminate accidents, but with efficient first aid promptly at hand the fatal tendencies of accidents can very frequently be arrested."

The aim of the Bureau, therefore, is to have men trained in first aid work distributed throughout the various industries, and with the object in view, greater effort was made to reach remoter plants and convince them of the necessity for this work. During the season, the following occupations were among those taking training:—

Blacksmiths, carpenters, box factory employees, inspectors, abattoir employees, caretakers, machinists, woodworkers, shipping clerks, warehousemen, cement factory employees, engineers.

Among the plants were included: The Canada Cement Company, Fort Whyte; Harris Abattoir Company, Limited, St. Boniface; Union Abattoir Company, Limited, St. Boniface; Welwood's Limited, Elmwood; Marshall Wells, Limited, Winnipeg; Manitoba Bridge & Iron Works, Winnipeg.

Sixty-five students attended these classes. The usual interest in the work was evidenced and maintained right up to the close of the classes. The forty-two students who presented themselves for examination were successful. The general beneficial effects of this training are appreciated throughout the industrial plants, but it is stated that there is still a wide field for further development in this particular phase of work.

Fair Wages under Government Contracts.—The schedules of rates of wages and working hours issued by the Bureau under the Fair Wage Act of Manitoba were reprinted in the Labour Gazette, May 1926, page 504.

Unemployment Relief.—The report contains an appendix on unemployment relief in Winnipeg and other urban centres. The provincial government agreed to share the burden of relief with the municipalities on the following basis:—

(1) Effective December 15, 1925, to assist in relief of persons, in excess of a normal number, having two or more dependents, by refunding the municipality one-quarter of the financial relief necessary.

(2) To pay to municipality one-third of the excess cost of doing organized work in the winter time as compared with the summer.

(3) To pay to municipality one-half of the increased administration expenses due to relief measures.

(4) To pay municipalities one-half of the cost of furnishing men with transportation to return to their homes, or to places where work could be found for them.

Supporting this relief work the Federal Government passed Privy Council Order No. 315 (Labour Gazette, March, 1926, page 232), the Dominion Government agreeing to pay one-third of the cost of supplying food, shelter and clothing, also medical assistance, providing the Provincial Government would bear an equal proportion. The period was restricted from January 1, 1926, to March 31, 1926. The order also provided that the Federal Government would pay half of the cost incurred by the Provincial Government in unorganized districts.

The provisions of the Privy Council Order were conditional on the Provincial Government agreeing to pay at least one-third of the relief expenditure during the period of January 1, 1926, to March 31, 1926, and this was done in order that municipalities would be able to make a claim on the Federal Government.

The work was carried out along the lines of previous years, i.e., destitute families were provided with food and fuel, and in some cases it was necessary to pay rent. Vigorous efforts were made to try and obtain employment, and through these efforts quite a number of men were placed in farm jobs and in lumber camps. No relief was given single men, they being told that they would have to find jobs for themselves on farms or in camps, and in a number of cases single men were furnished with transportation.

It was necessary to relieve a number of destitute families in disorganized municipalities, and it was found possible to confine this relief to consignments of flour and rolled oats, promises being taken from those obtaining relief to work out the value of same in public work.

In spite of the relief necessary in disorganized districts, the total cost to the Provincial Government was only $16,567.57, which is less than one-third of any previous year since 1920. Participation by the Provincial Government ceased on April 30, 1926.

In regard to the agreement made by the Federal Government, accounts were rendered for each municipality and for the expenditures in unorganized and disorganized districts.

LABOUR AND INDUSTRY IN SASKATCHEWAN

THE sixth annual report of the Bureau of Labour and Industries of Saskatchewan, recently published, describes the Bureau's operations during the twelve months ended April 30, 1926. The functions of the Bureau, as prescribed by the Bureau of Labour and Industries Act of 1920, include the administration of the Factories Act, the Building Trades Protection Act, the Electrical Workers' Protection Act, the Employment Agencies Act, the Mines Act and the Minimum Wage Act. In addition to these administrative duties the Bureau is charged with the duty of preparing statistics of employment, wages and hours of labour; strikes and lockouts; labour organization; industrial relations; conditions of industrial employment and the natural resources of the province.

Saskatchewan was one of the three provinces in the Dominion in which no strikes occurred during the year.

Industrial Accidents.—The Inspecting Division of the department has recently been assigned the duty of investigating claims for compensation made by those employees of the provincial government whose occupations bring them within the provisions of the Workmen's Compensation Act. (No compensation board exists in Saskatchewan, where disputed claims for compensation are dealt with in the courts). The recommendations made to the departments concerned were invariably accepted, and were apparently satisfactory to the employees themselves, as no requests were made for reconsideration of the suggested settlements. It is noted that in connection with the work of the Highways Department, with a construction programme of over two million dollars, the amount paid in compensation was less than $2,000, due, it is claimed, to the care exercised by those in charge of the work. The report gives details of the various industrial accidents thus disposed of during the year. Particulars are given also of the accidents which occurred in the factories and mines, and in connection with building construction in the province.

The accidents and the time loss due to accidents in various industries reported under the provisions of the Workmen's Compensation Act and the Mines Act were as follows:—

ACCIDENTS AND TIME LOSS IN VARIOUS INDUSTRIES IN SASKATCHEWAN, 1925–6

Trade or Industry	Fatal	Permanent	Temporary	Time lost in days
Building Trades	2	4	22	537
Electrical or Metal Trades	.....	1	26	401
Lumbering	1	1	12	249
Mines (Coal)	1	2	33	640
Food Preparation	.....	.....	65	570
Railways, Electric and Steam	5	13	614	12,582
Printing and Publishing	.....	.....	9	105
Woodworkers	.....	2	2	62
Civic Employees and Public	2	.....	38	919
Miscellaneous	2	1	51	1,041
	13	24	872	17,107

Attention is called to the danger in the mining industry from unguarded explosives. "Properly constructed magazines," it is stated "for the storage of explosives are required not only by the Dominion law, but also by *The Mines Act* for this province and are of vital importance for the safe operation of any industry in which explosives are used. Magazines should be safeguarded as far as possible from fire hazard, and ventilated to prevent deterioration of the contents from moisture, which may effect the safety and efficiency of the explosive."

Manufacturing Industries.—The number of factory employees in the province in 1924, the last year for which such figures were available, is given as 4,152, these employees receiving in salaries and wages $5,554,416, and producing goods of a gross value of $36,313,931. Statistics of the ten leading manufacturing industries in the province for 1924 are given in the following table:—

EMPLOYEES, WAGES, ETC., IN CERTAIN INDUSTRIES IN SASKATCHEWAN IN 1924

Industries	No.	Capital	Employees	Salaries and Wages	Cost of Materials	Value of Products
		$	$	$	$	$
Flour mills	43	4,042,243	585	841,103	9,306,826	11,721,675
Butter and cheese	71	3,311,970	589	636,696	4,062,775	5,778,083
Printing and publishing	124	2,654,250	690	1,121,336	640,985	2,761,234
Electric light and power	116	8,397,101	404	553,506	.....	2,071,931
Bread and other products	101	1,260,899	351	396,480	861,214	1,700,506
Planing mills, sash and door factories	11	1,133,368	192	237,911	429,876	808,539
Dyeing and cleaning and laundry work	21	427,481	249	258,665	111,124	557,340
Aerated and mineral waters	12	462,867	47	69,232	101,876	296,902
Printing and book-binding	18	275,303	87	130,123	80,355	267,551
Sawmills	7	168,819	115	71,141	84,476	171,257
Total	524	22,134,301	3,309	4,316,193	15,679,507	26,765,048

Coal Mining.—The total production of coal in 1925 was 470,686 tons, a somewhat smaller figure than for the preceding year when weather conditions caused a greater local demand. The larger mines, it is stated, are now fully equipped to handle large production. Fifty-four mines were active during the year, employing on an average 371 miners underground and 123 labourers above ground. Seven electric coal cutting machines, and ten mechanical box car loaders were in operation. Nine mines were ventilated by centrifugal fans and 45 by natural means, 48 of the mines being operated by drifts or slopes.

Other Industries.—The Employment Service placed 70,556 persons in employment on farms during the year. The average wage for farm work was, for spring work, $35 to $55 a month; for harvesting, $3.50 to $5 a day; and for winter work, $10 to $25 per month. Apart from agriculture, the outstanding industry in Saskatchewan, the report mentions among the other industries of the province the non-metallic mineral group including clay products, sand and gravel. In the forestry industry there was a cut of nearly 24 million feet board measure, in addition to railway ties and cordwood, yielding a revenue of over $80,000. In the winter of 1925-6 a total of 2,286 men were engaged in the lumber camps.

In the fur industry the estimated amount paid to trappers was nearly two million dollars. Inland fisheries are of considerable commercial importance, the principal product being whitefish and trout. The report states that this industry is but in its infancy and claims that the fish in the lakes of Saskatchewan are "sufficient to supply the needs of the whole continent."

Employment Service.—Particulars of the work of the Employment Service are given in regular articles in the Labour Gazette. Nine permanent offices are maintained in Saskatchewan, these being at Regina, Saskatoon, Moose Jaw, Swift Current, Yorkton, Prince Albert, Weyburn, Estevan and North Battleford. A teachers' exchange and clearing house is maintained at Regina. These offices work in co-operation with the similar offices in other provinces securing an interchange of workers for harvesting. The staff of the provincial service includes one general superintendent, 9 local superintendents, 10 clerks and 7 stenographers. The average cost of each placement was 67 cents.

Labour Legislation.—The report contains an outline of the new legislation enacted during the year, and of the legislative proposals made to the provincial government by labour organizations, with an outline of the answers made by the responsible ministers.

Reference is made also to the amended Fair Wage clause of the province, the text of which was given in the Labour Gazette, February, 1926, page 191.

Minimum Wages

The report gives statistics of employment in establishments coming under the orders of the Minimum Wage Board. The figures given are for the 12-months' period prior to the issuing of the new orders of the Minimum Wage Board in August, 1926, (Labour Gazette, September, 1926, page 872). The new orders increased the minimum rates for experienced employees from $14 to $15 a week in shops, and from $13 to $14 in laundries and factories and in mail order houses. They also reduced the number of working hours and included certain other new provisions favourable to the employees. Some figures in connection with the administration of the several orders in 1925-6 are given below.

Shops and Stores.—Number of firms, 199; number of employees, 999 (inexperienced, 300; experienced, 699); employees on piece work or part time, 76; employees on wages of $15 and over, 579.

Laundries and Factories.—Number of firms, 57; number of employees, 266 (inexperienced, 74; experienced, 192); employees on piece work or part time, 3; employees on wages of $14 or over, 149.

Mail Order Houses.—Number of firms, 3; number of employees, 285; (inexperienced, 53; experienced, 232); employees on wages of $15 and over, 88.

All establishments except hotels, restaurants and refreshment rooms.—Number of firms, 259; number of employees, 1,550 (inexperienced, 427 ;experienced, 1,123); employees on piece work and part time, 79; employees on wages of $12, 104; of $13, 108; of $14, 142; of $15 and over, 869.

Hotels, Restaurants and Refreshment Rooms in cities.—Number of firms, 141; number of employees, 549 (inexperienced, 12; experienced, 537). Of these employees, 36 had no "extras," 14 of the number receiving wages of $15 or over; 322 had board; 178 had board and room, and 13 had room only.

THE MINING INDUSTRY IN NOVA SCOTIA IN 1926

THE annual report on the mines of Nova Scotia, being for the fiscal year ended September 30, 1926, has been published recently by the Provincial Department of Public Works and Mines. It contains a full account of mining operations in the province, including statistics of the metalliferous and coal mines and quarries, with a description of each mine, and a directory of coal mines. Valuable papers on mining subjects are also included, among these being a report, prepared by Mr. F. H. Sexton, president of the Nova Scotia Technical College, on the International Conference on Bituminous Coal, held at the Carnegie Institute of Technology at Pittsburgh, in November, 1926.

The Minister of Public Works and Mines, in a prefatory note, calls attention to the increased consumption of Nova Scotia coal both within the province itself and in the St. Lawrence market, this increase being attributed in part to the prolonged coal strike in Great Britain. In pursuance of a vote of the Legislature at the last session, some equipment was added at the Technical College for the purpose of testing Nova Scotia coals. The intention is to ascertain the best conditions for combustion of the different grades of coal throughout the Province by actual tests under boilers for both steam and domestic purposes. A part of this apparatus consists of a Nova Scotia designed domestic furnace of the self-cleaning type. It is especially designed to use slack coals of the Province, and should the tests in regard to it prove satisfactory they will, the minister states, be in the fortunate position of having a Nova Scotia product for the particular use of cheap slack coals of the Province.

Two independent surveys of the gold mining industry were made during the year, resulting in a revival of interest in this subject. The conclusion is reached, however, that profitable production of gold in the province can be undertaken only by large companies having the funds required for blocking out and developing large bodies of ore. Several companies are now carrying on extensive prospecting, and there are hopes that the industry may show profits before long.

The Province of Nova Scotia is rapidly coming to the front as a producer of gypsum. The output has been growing steadily from year to year, until it has now reached over 600,000 tons an increase of 130,000 tons over last year. This mineral is one that is not reserved to the Crown, but passed with the land. At present most of the gypsum mined in the Province is exported in its raw state to be calcined and manufactured chiefly into plaster outside of Nova Scotia, largely in the United States. Reference is made also to the possibility of future developments in connection with the lead ore and copper and zinc deposits.

The report of the Deputy Minister sums up the principal mining statistics of the year as follows:—

The number of men employed at the coal mines show the total to be 11,914, as compared with 11,652 of the previous year.

The total number of man days worked was 2,764,135, as compared with 1,688,744 in the fiscal year of 1925, which is an increase of 1,075,391 days.

The coal output for the year was 5,652,314 tons of 2,240 pounds, as compared with the previous year's output of 3,288,321 tons, an increase of 2,363,993 tons.

The coal sales for the year were 5,090,599 tons of 2,240 pounds, as compared with the previous year's sales of 2,893,608 tons, an increase of 3,196,991 tons.

The quantity of coal distributed for consumption in Nova Scotia during the fiscal year was 1,849,419 tons of 2,240 pounds, as compared with the previous year, 1,284,803 tons, an increase of 564,616 tons.

Shipments to the United States were 18,271 tons during the fiscal year, as compared with 2,280 tons for the previous year.

The shipments to the St. Lawrence markets in the fiscal year were 1,981,724 tons of 2,240 pounds, as compared with 807,505 tons for the previous year, an increase of 1,174,219 tons.

The report notes that the coal industry has again reached large proportions, and since the settlement of labour difficulties has shown great improvement, the prospects for steady work at the collieries during the winter months being very promising.

The quantity of coal supplied the Dominion Iron & Steel Company was 757,763 tons as against 370,061 tons in 1925, a large increase of 387,702 tons.

The quantity of coke manufactured in the Province this year was 453,228 tons; last year there were 198,926 tons showing an increase of 254,302 tons.

The quantity of tar manufactured from coal during the fiscal year was 6,634,031 imperial gallons, as against 2,973,108 gallons manufactured during the previous year.

The benzol gas, from coal manufactured for motor fuel, etc., during the year was 1,313,560 imperial gallons, as against 393,953 in

the previous year, showing an increase of 919,607 gallons.

1,351 ounces of gold was produced during the year, showing a decrease of 175 ounces as compared with last year.

1,016,604 silicate brick were manufactured during the past year. This is a decrease of 101,314, as compared with the previous year.

The mining and shipment of crude and calcined gypsum reached 607,116 tons for the fiscal year. This is an increase of 135,942 tons over the previous year.

The number and classes of workmen in the coal mines during the year were as follows:—

Average daily force—	
Surface	1,928
Underground, cutting coal	4,045
Underground, other labour	5,451
Total man-days	2,764,135
Miscellaneous employees	490
Total workmen	11,914
Total horses	848

The number of short hours produced per man in 1926 is given as 554 in 1926, 319 in 1925, 369 in 1924.

Accidents.—Fatal accidents in the coal mines in the province during the year numbered 28. Of this number 23 were underground, 15 being due to falls of roof or face, and 5 were on the surface. The ratio of fatalities per 1,000 men employed was 2.35 in 1926, and 1.56 in 1925, and 2.05 in 1924. The corresponding ratio for mines in the United States is given by the United States Bureau of Mines as having been 2.87 in 1924.

ROCK-DUSTING IN ALBERTA COAL MINES

New Regulations providing against Danger of Coal Dust Explosions

REGULATIONS in connection with rock-dusting in coal mines have been issued in Alberta under the Mines Act of the Province, to be effective on and after May 1, 1927. These regulations follow inquiries instituted by the Provincial Government into the causes of two disasters which occurred in the Crows' Nest field, one at Hillcrest on September 19, when two miners were killed and much material damage was done to the mine; the other at Coleman, on November 23, when ten miners were killed.

Shortly after these disasters the Alberta Government invited Dr. George S. Rice, chief mining engineer of the United States Bureau of Mines, to investigate and report upon the conditions existing in the Hillcrest mines. Dr. Rice stated in his report that the amount of coal dust in the working places and levels in the Hillcrest mine and in many places in other mines in the Crowsnest district was appalling; moreover, it was extremely fine dangerous dust. The very friable nature of the coal was most largely responsible for dust-making, but the method of using chutes and of dumping into the chutes was an unfortunate practice of the whole Crowsnest district as concerns coal dust production. Some other method should have been tried, he suggested, such as the panel system with level room roads turned off engine planes, so as to take the cars to the face, or the panel longwall-retreating system using face conveyors, in some cases, retarding conveyors. Using these systems, the amount of coal dust produced and scattered would be greatly lessened; incidentally, there would be the important economic advantage of decreasing the breakage of coal which might alone justify the change. Furthermore, cutting machines could be used which would greatly increase the percentage of lump coal over that produced by hand and air-picks. With such methods, the combatting of the coal dust hazard by rock-dusting would be more easily accomplished.

In suggesting the use of rock dust as a preventive of explosion, Dr. Rice said: "I commend the proposals of your inspection service to call upon the coal mine operators of Alberta to rock-dust their coal mines. This method of explosion prevention was first proposed by the late Sir William E. Garforth, but not officially approved for many years. Rock-dusting was made compulsory in Great Britain in 1920, France in 1919, and Germany in 1926; also, recently, in British Columbia. It has been adopted in Nova Scotia by the British Empire Steel Corporation which produces most of the coal. In the United States, the federal government has no jurisdiction over mines and the Bureau of Mines makes recommendations only. Rock-dusting was recommended after extensive testing of all known practical methods 1908-1913. However, it was not until a series of coal-dust explosion disasters in 1922-1924 that many mine operators adopted rock-dusting. Now practically all the leading coal-mining states sanction the use of rock-dusting, and one state (Utah) compels its use. Rock-dust legislative measures are pending in a number of states. Most of the largest coal-mining companies in the United States have voluntarily adopted rock-dust and the movement is constantly growing. No coal mines in the United States or Europe which have been protected by rock-

dusting have experienced widespread explosions, although many ignitions of fire damp have occurred in various rock-dusted mines, which without this protection would, according to the testimony of the respective operators, have been swept by great explosions.

"Another report is being prepared by me, at the request of Mr. John T. Stirling, Chief Inspector of Mines, on the subject of explosion hazards and rock-dusting of coal mines, which will discuss these subjects and the application of the rock-dusting method. I will, therefore, not enlarge on the details in this report, but will state that the method can be efficiently used and the cost after the start is not high, but this cost will be influenced by the rapidity with which coal dust is made and the amount of incombustible matter in the road and rib dust.

"It is my recommendation that not only should your proposed regulations be closely followed, but the respective mine managements go beyond the letter of the draft of regulations recently discussed with the mine operators by Mr. Stirling at Blairmore in the matter of dusting rooms and employ rock in all parts of a mine or at least the use of 'inclosed rock-dust barriers' over the mouth of chutes."

Among other recommendations, Dr. Rice urges the general principle that old workings which cannot be daily inspected should be sealed with strong stoppings of concrete or masonry.

The text of the new regulations is as follows:—

REGULATIONS IN CONNECTION WITH ROCK-DUSTING

1. The following regulations shall apply to all mines in which coal is worked.

2. The floor, roof, and sides of every road or part of a road which is accessible shall be treated with incombustible dust in such manner and at such intervals of time as will ensure that the dust on the floor, roof and sides respectively shall always consist throughout of a mixture containing not less than 50 per cent of incombustible matter:

Provided that parts of a mine in which the dust mixture on the floor, sides, timbers and roof contains at least thirty per cent of water, need not be treated with incombustible dust and provided also, that the obligation imposed by this regulation shall not apply in respect of any road or any part of a road if and so long as the natural conditions thereof as regards the presence of incombustible matter are found by tests made in accordance with these regulations to be such as to comply with the foregoing requirements.

3. The incombustible dust used for the purpose of the preceding regulation shall pass through a sieve of 28 mesh to the lineal inch and shall contain not less than 50 per cent by weight of fine material which shall be capable when dry of passing through a sieve of 200 mesh to the lineal inch (40,000 to the square inch).

4. For the purpose of determining the adequacy of the treatment the mine shall be divided into zones and a plan approved from time to time by the Minister, shall be kept at the mine, showing the number and location of such zones. In at least one representative place in each zone, sampling of the dust present shall be done during each calendar month.

(*a*) In addition sampling shall also be done when by visual inspection the dust in a stretch or zone of entry 100 feet or more in length appears to contain coal dust in an amount that may make the incombustible content of all the dust in that zone less than 50 per cent.

(*b*) The sampling shall be done in the following manner

(1) A groove six inches wide across the floor from rib to rib shall be made by scoop or other means in the loose fine material.

(2) A six-inch strip of dust shall be brushed from both ribs and the roof and also where the entry has timber sets from the top of one collar and six inches wide from any lagging.

(1) and (2) shall be gathered separately on canvas or oilcloth and the portions passing through a 28-mesh sieve shall be considered as representative of the respective parts of the dust present. Each part (1) and (2) shall be weighed separately to determine the approximate amount of respective dust per lineal six inches and then determination made of the incombustible content of each part.

(*c*) The percentage of incombustible matter in the samples shall be determined by the volumeter or by chemical analysis.

(*d*) Results of the tests shall be posted at the entrance to the mine and recorded in a book to be kept at the mine for the purpose. The book shall also show the zone and the location in the zone at which each sample was taken.

5. Before any part of a road is dusted for the first time with incombustible dust, it shall be cleaned as thoroughly as possible of all combustible dust.

6. No dust shall be used for the purpose of complying with these regulations of a kind which may be prohibited by the Minister on the ground that it would not be effective or that it would be injurious to the health of persons working in the mine.

7. In the foregoing regulations "road" includes all roads of any description in the mine to within thirty feet of the coal face but rooms, offices, stables, engine, motor, transformer and pump rooms shall not be deemed to form part of any road.

8. In isolated panels in which no exposed electric circuits or non-permissible motors are used, and in which only permissible safety lamps and permissible explosives are used, protection may be given by rock-dusting the entries and by rock-dust barriers at each entrance and exit.

(*a*) An "isolated panel" is a separate portion of a mine, consisting of one or more room headings surrounded by a continuous pillar except where connected with the rest of the mine by not more than two sets of haulage and airway entries.

(*b*) Where rock dust barriers are installed, the amount of dust used shall be at least 100 lbs. per square foot of average cross section of entry, at the barrier zone.

ANNUAL REPORT OF THE NATIONAL RESEARCH COUNCIL OF CANADA

THE annual report of the Honorary Advisory Council for Scientific and Industrial Research, for the year ending March 31, 1926, has been published recently. Some account of the origin and functions of the National Research Council was given in the Labour Gazette for June, 1926 (pages 558-9). It was established in 1916 to co-operate with the British Department of Scientific and Industrial Research in developing such studies throughout the British Empire. The Canadian Council was incorporated under an Act passed in 1924, its purposes being as follows: To promote the utilization of the natural resources of Canada; to undertake researches with the object of improving the technical processes in the industries of Canada, and of discovering processes and methods which may promote the expansion of existing or the development of new industries; to undertake researches with the view of utilizing the waste products of said industries; the investigation and determination of standards and methods of measurements; the standardization and certification of the scientific and technical apparatus and instruments for the Government service and for use in the industries of Canada; the investigation and standardization, at the request of any of the industries of Canada, of the materials which are or may be used in, or of the products of, the industries making such a request; to undertake researches, the object of which is to improve conditions in agriculture.

It is the purpose of the National Research Council in establishing a system of scholarships to develop, in Canada, a corps of highly trained research men for service not only in Canadian universities and technical schools, but also in the industries, in the technical service of the Federal and Provincial Governments and in agriculture. Three classes of scholarships are awarded by the Council, namely bursaries, studentships and fellowships, having an annual value of $750, $1,000 and $1,200, respectively.

The report on the work carried on in the last fiscal year states that it has been possible for the Council, at a comparatively small cost to the public treasury, to so stimulate research work in Canada as to enable it to build up as active and as effective research organization as it is possible to establish on a voluntary service basis. This has been accomplished through a policy of enlisting the co-operation of existing research organizations and trained scientific investigators, and of utilizing fully the equipment which they possess, in the prosecution of co-ordinated researches. The Council has in many cases granted partial assistance to enable these organizations to secure the services of research assistants or necessary special equipment, thus ensuring the prosecution of approved work. At the close of the year under review, fifteen associate committees were in active operation under the auspices of the Council. The membership of these committees was composed of 228 persons who, without remuneration, gave of their time and experience in furthering the work of the Council. During the same period there were also in progress under the auspices of the Council, in various Canadian laboratories spread from Halifax to Vancouver, forty-two specific investigations, each of which was directed, without remuneration, by a Canadian scientist possessing special qualifications to undertake the particular research work entrusted to him.

In addition to the above, during the past year, forty-five persons who had graduated from a university with distinction in science and many of whom had several years' experience in post-graduate research work were undergoing further post-graduate training in scientific research in the laboratories of various Canadian universities under National Research Council scholarships. Each of these scholarship grantees worked under the supervision of an approved member of the staff of the university where he was located, who co-operated without remuneration to this end.

The total research organizations actively at work under the auspices of the National Research Council during the year 1925-26 numbered 389, of which number 314 persons served without remuneration.

Through the International Research Council and its various unions, the National Research Council of Canada is enabled to keep in close touch with the development of scientific thought and progress throughout the civilized world.

The National Research Council is the official adviser of the federal government on scientific questions, and is frequently called upon through the Department of External Affairs, to pass judgment on important international questions of a scientific nature, such as, for example, communications from the League of Nations regarding a proposed Convention on the Protection of Scientific Property, a communication from the World's Metric Standardization Council regarding a

scheme for world metric standardization, a report from the Colonial Research Committee of Great Britain, a report from the Imperial Economic Conference regarding research, a request for financial assistance in the publication of the International Tables of Constants and Numerical Data of Chemistry, Physics, and Technology, and several requests for co-operation in finding qualified candidates for British Scholarships available to Canadians for post-graduate work in Great Britain.

The total revenue which the National Research Council received from all sources during the fiscal year 1925-26, was $138,573.74. Of this amount $135,000 was voted by Parliament for the work of the Council.

REPORT OF COMMITTEE ON UNEMPLOYMENT INSURANCE IN GREAT BRITAIN

THE Committee of Inquiry appointed by the Minister of Labour of Great Britain in November, 1925, "to consider, in the light of experience gained in the working of the unemployment insurance scheme, what changes in the scheme, if any, ought to be made," published a report in February. The chairman of the committee was the Right Hon. Lord Blanesburgh, the members being chosen as representing the interest of employers and workers, as well as those of the general public, including a member conversant with poor law administration and two chairmen of local employment committees. The committee reached its findings unanimously, the report stating that this result was obtained by the spirit of compromise, and should enhance the value of the recommendations, and bring to the unemployment insurance system a stability "that hitherto it has sadly lacked."

The report established the fact of a general agreement that the risk of unemployment should be insured. All the witnesses who appeared before the committee recognized, and the committee themselves shared the view, that an unemployment insurance scheme must now be regarded as "a permanent feature of our code of social legislation."

The report contains an historical review of unemployment insurance, tracing its genesis from the action of the friendly societies and trade unions in the nineteenth century to the original statute of 1911 (the National Insurance Act, Part II), which was applied to certain selected trades covering about two and a quarter million manual workers. The review explains the principles of the Act of 1920, which for the first time extended the insurance scheme to substantially the whole of the employed population, excepting agriculture and private domestic service, and it shows how, immediately after the passing of this Act, the post-war depression in trade led to various modifications.

Alleged Abuses of the "Dole."—After a reference to the recommendation of the first of the International Labour Conferences, convened in 1919 at Washington by the International Labour Organization, to the effect that each country should establish a system of unemployment insurance, the committee deal with the allegations so widely made that the unemployment insurance system is subject to widespread abuse. The conclusion reached is as follows:—

> It is true that a certain number out of the 11¾ millions of insured persons have received relief to which they had no claim. But it is equally true that these cases are relatively few, and that result is, we think, due to the vigilance with which the ministry, while dealing fairly with the genuine claimant, guards against abuse.

The report refers to the special precautions taken by the ministry in this regard, and to an investigation in 1925 which showed that of the claims to benefit current at the time well under five per cent were considered to have been wrongly allowed, and of these it is observed that many were the subject of a legitimate difference of opinion between the officers who had conducted the investigation on the one hand and the local employment committees and officers of the ministry who had admitted them on the other. The cases here mentioned are not cases of fraud, in regard to which the committee point out that the number is almost negligible.

The committee recognize, however, that there are latent in all compulsory schemes of unemployment insurance subtle tendencies to abuse, and that "no system can claim to be completely satisfactory which does not by its corrective provisions succeed in neutralizing these tendencies."

A Contributory Scheme.—On the question of whether an insurance scheme should be contributory or non-contributory, the committee considered the formulation of a non-contributory scheme to be outside the scope of their inquiry. Six special conditions are laid down as requisite in a rightly planned contributory scheme. They are that the worker's contribution must be moderate; the

extent of the benefit must not tempt the insured contributor to improvidence when in receipt of good pay; the benefits should be definitely less in amount than the general labourer's rate of wage, so that there must be no temptation to prefer benefit to work; the mobility of labour must not be unduly restricted; there must be no deterrent to emigration for those who would be benefited by a life overseas; and, subject to these conditions, the scheme should be as attractive as, on an actuarial basis, it is possible to make it.

The report next sets forth the outlines of a permanent unemployment insurance scheme as follows:—

(1) *Unemployment Fund.*—There should be an unemployment fund, subscribed in equal proportions by employers, employed, and the state, of amounts actuarially certified to be sufficient to enable the outgoings in benefits and administration to be met over a trade cycle.

(2) *Scope.*—The classes of persons to whom the scheme is to apply should be substantially the same as under the present scheme. It should be compulsory on them and their employers.

(3) *Rates of Benefit.*—There should be paid from the unemployment fund benefits at the following weekly rates:—

Men	17s.
Women	15s.
Adult dependants (not more than one for any insured contributor)	7s.
Dependent children under the age of 14	2s.
Young men aged 18 to 21	10s.
Young women aged 18 to 21	8s.
Boys aged 16 to 18	6s.
Girls aged 16 to 18	5s.

(4) *Conditions for the Receipt of Benefit.*—A claimant for unemployment benefit should be entitled to it, subject to a waiting period of six days, provided—

(*a*) that at least 30 contributions have been paid in the previous two years in respect of him; and

(*b*) that he is genuinely seeking work but unable to obtain suitable employment, and is capable of and available for work;

(*c*) that he is free from the disqualifications for benefit, showing particularly,

(i) that he has not left his employment voluntarily without just cause or been dismissed for misconduct;

(ii) that he is not affected by the trade dispute disqualification.

In the case of juveniles, the payment should also be conditional on attendance at an approved course of instruction, where such instruction is available.

(5) *Contributions.*—The normal contributions payable by each of the three parties should be at the following weekly rates:—

Men	5d.
Women	3½d.
Young men aged 18-21	4d.
Young women aged 18-21	3d.
Boys aged 16-18	2½d.
Girls aged 16-18	2d.

(6) *Administration.*—The scheme should be administered by the Ministry of Labour through the medium of the employment exchanges. Decisions on claims to benefit should be subject to an appeal to the Courts of Referees and in certain cases to the umpire. Where benefit has been paid for a lengthy period, the claim should be specially reviewed by the Court of Referees.

The cost of administration should be a charge on the fund, save that, if it exceeds in any year one-eighth of the contributions, the balance should, as at present, be paid by the exchequer.

Trade Cycles.—The committee was advised by the government actuary that the foregoing scheme was "actuarially sound in the sense that the incomings and outgoings of the fund over a trade cycle will balance. The exact length of the trade cycle is a thing which has not been and perhaps cannot be accurately determined, but this uncertainty does not vitiate the arrangement by which the balancing of the fund is secured. All that is necessary is that the scheme shall commence in such a cycle. So commenced, its income and expenditure have been fixed so as to balance over a period of from 10 to 15 years, including good, bad and average experiences of employment. If unemployment is light in the earlier years of the period, then a reserve will be accumulated to be expended in the later years against heavy unemployment, which is to be expected if the average figure is right. Conversely, a deficit occurring in the earlier years would be met by advances from the exchequer carrying interest as in the existing scheme, to be repaid out of the excess of income over expenditure in the later part of the period. It is impossible, of course, to predict with certainty that the experience anticipated will actually occur. Even actuaries are not prophets. But in order that neither a surplus nor a deficit should reach unwieldly proportions, we recommend that there be an actuarial inquiry into the position of the fund every five years.

NOTES ON LABOUR UNION ACTIVITIES

Ontario Locomotive Engineers

The provincial legislative board of the Brotherhood of Locomotive Engineers, composed of delegates from all locals in the province of Ontario on the Canadian National lines, Canadian Pacific railway, Wabash railway, Michigan Central, Père Marquette, Temiskaming and Northern Ontario, and Algoma Central Railways, held one of its most important sessions in Toronto on February 17-26, 1927.

Some of the questions taken up were as follows: (1) Motor bus and truck competition, as they affect earning power of railways, and the appointment of a commission to handle this matter; (2) Preventive measures to avoid accident to vehicles and pedestrians at railway crossings at grade; (3) Workmen's Compensation Act; (4) Mother's Allowance Act; (5) Income Tax Act; (6) The appointing of practical men as inspectors of locomotives and railway appliances, under the railway commission or civil service of Canada.

The board recommended that a pension plan for employees be adopted by all railways.

A resolution was adopted, for presentation to Premier Ferguson, supporting the request for increased exemption from income tax. During the discussion on this resolution, strong exception was taken to the action of the Municipal Association in opposing this bill. Exception was also taken to the opposition of the Motor League in opposing the stop law at railway crossings to prevent accidents.

Hon. Peter Heenan, Federal Minister of Labour, formerly a vice-president of the provincial legislative board, addressed the meeting.

The officers elected, who will be the representatives of the board for the next three years, are as follows: Chairman, J. S. Crawford, Sarnia; first vice-chairman, F. W. Logan, Brockville; second vice-chairman, A. J. Campbell; secretary-treasurer, G. T. McLaughlin, Smiths' Falls.

Ottawa Civic Employees' Union

A delegation from Federal Union No. 15, Civic Employees, composed of President T. J. Curley and Corresponding Secretary Rod Plant, waited on the Ottawa city Board of Control on February 24 and presented requests for holidays for certain classes of civic employees. The attention of the board was drawn to a resolution which had been adopted by the city council on June 15, 1925, on the subject of holidays for civic employees, the interpretation of which has been the subject of much correspondence between the Board of Control, the Commissioner of Works, and Civic Employees' Federal Union No. 15. The resolution specified that the privileges of holidays or sick leave to the extent of one week each year be granted to regular or year-round employees. Owing to the difficulty experienced in the proper interpretation of this resolution, the delegation suggested that it be amended or rescinded, and another substituted which would more clearly define who was a regular employee; and with this end in view they submitted the following proposals: (1) That an employee who has been in the employ of the Corporation of Ottawa for a period of five years or more, who follows the occupation as a regular means of livelihood and remains in the city's service so long as there is work for him, should be entitled to the benefits as provided; (2) that where the services of such employees are to be dispensed with because of lack of their particular class of work, they should be transferred to such other work as they are competent to perform, irrespective of the department of the civic service in which this work is obtainable, and that this arrangement be carried out on the basis of seniority.

Confederation of Catholic Workers of Canada

A delegation representing the Confederation of Catholic Workers of Canada laid before the Government at Ottawa on February 25, certain resolutions that were adopted at the congress held at Sherbrooke last September (The proceedings at this congress were outlined in the LABOUR GAZETTE, October, 1926, page 980). The Dominion Government was represented by the Hon. Peter Heenan, Minister of Labour; the Hon. Ernest Lapointe, Minister of Justice; the Hon. J. H. King, Minister of Soldiers' Civil Re-establishment and Health, and the Hon. P. J. Veniot, Postmaster General.

The delegation made the following requests:—

1. That the executive of the Federation be given a hearing before the parliamentary committee charged with the framing of the old age pension bill;

2. That article 501 of the Criminal Code be amended so as to permit peaceful picketing during a strike;

3. That an act authorizing the registering of trade union labels be passed;

4. That the 8-hour day be extended to women working in the various industries;

5. That a committee composed of representatives of the government, industry and workers, be formed for the purpose of examining and suggesting any changes which may be made in the regulations governing the dry-docks Champlain and Lorme, at Lauzon;

6. That a representative of the Federation of the Catholic Workers of Canada at the international labour conference at Geneva form part of the Canadian labour delegation.

Mr. Heenan stated that these requests would receive careful consideration. In regard to the first request, however, the delegates were informed that the parliamentary committee on Old Age Pensions completed its work in 1924 (Labour Gazette, July, 1924, page 580).

Vancouver Electrical Workers' Union

The Electrical Workers Union, No. 213, Vancouver, B.C., on February 21, by unanimous vote suspended one of its members for violating the new union rules. This was the first suspension under the by-laws which call for the registration of all unemployed members in the office of the union. It is provided that members are not to solicit work, but are to be sent to jobs from the union headquarters. This by-law was ignored by a member who solicited and obtained work without the sanction of the union, with the result that he was suspended for three months.

Halifax Trades and Labour Council

The Halifax District Trades and Labour Council recently submitted to the Government of Nova Scotia a memorandum featuring the following suggested amendments to the Workmen's Compensation Act of Nova Scotia: (1) Increase of the weekly compensation maximum to 66⅔ per cent of average earnings; (2) Increase of minimum weekly payments to $8; (3) Increase of the basic average yearly earnings to $1,500; (4) Increase of the monthly allowance to widows and invalid widowers to $40; (5) Increase of the monthly allowance to children to $10; (6) Increase of the monthly allowance to widow or invalid widower and children to $80; (7) Increase of the monthly allowance in case of dependent children to $20 for each child, not to exceed $80; (8) Increase of the monthly allowance where compensation is payable to persons other than those afore-mentioned to $40, and not to exceed $60; (9) Increase of the allowance to widows remarrying to $25 per month for 25 months; (10) Provide for full medical and surgical aid; (11) Increase of the funeral allowance to $100; (12) Addition of a clause to provide for frost bite.

In addition to the above the Halifax District Trades and Labour Council recommended: (1) The enactment of legislation for Old Age Pensions in event of Federal Parliament passing such a law; (2) The appointment of a board to make effective the provisions of the Minimum Wage Law for women, now on the statutes.

The Late Narcisse Arcand

Mr. Narcisse Arcand, at one time Fair Wage Officer of the Department of Labour, died at his residence, 4320 Berri St., Montreal, Que., on February 14th, 1927. The deceased first identified himself with the labour movement in 1900, when he became a member of the Brotherhood of Carpenters and Joiners of America. Since joining the Brotherhood he held many important offices, being president of the provincial council, secretary of the district council and general organizer for his union, having held the latter position for twenty-two years. For many years he represented his local at the conventions of the Trades and Labour Congress of Canada.

A survey was recently made in the Wharton School of Finance and Commerce of the University of Pennsylvania of the age of presidents and vice-presidents, actively engaged in the United States in the conduct of 100 large organizations in the fields of industry, finance, transportation, telephone and telegraph communication and banking. The result showed that the administration of the leading business and industrial organizations is in the hands of men whose average age is about 60 years. The youngest executives were found in the banking group, their average being 55-56. Among the industrial organizations the average age of presidents is 59½ years, and that of the vice-presidents 57½, while the presidents of the country's principal railroad systems average 63½, and the vice-presidents 62½. Oldest as a group are the financiers, whose average age is slightly more than 64 years. Included in this group are the active heads of great financial organizations, the activities of which are far wider and more varied than those of the average bank.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Canadian National Safety League

THE Canadian National Safety League recently published its eighth annual report, describing the work accomplished during the year 1926. The national organization coordinates the work of the various provincial leagues, which include the Ontario Safety League, an older organization, which is now in the fourteenth year of its existence; the province of Quebec Safety League; the Maritime Safety League (covering the provinces of Prince Edward Island, Nova Scotia and New Brunswick); and the Manitoba Safety League. The national body moreover carries on general safety work throughout the Dominion. In addition to financial aid and cooperation in safety propaganda rendered to the provincial leagues the Canadian National Safety League conducts work in Alberta, British Columbia and Saskatchewan, in so far as these places can be reached from the head office at Toronto. The league receives valuable assistance in its work from other public bodies, organizations and from public officials, including public libraries, boards of trade, chambers of commerce, fire and police chiefs, the Canadian National and the Canadian Pacific railways, fire and forest rangers, etc. By these means wide distribution of safety literature is made throughout Canada. During the past year the Dominion Government continued its annual grant of $10,000 to assist in the work of the league.

While the league aims at reducing the number of general accidents (including automobile accidents, drownings, etc.), a large part of its work is in furthering the work of preventing industrial accidents, much of the safety literature being sent to manufacturers throughout Canada. Referring to this side of the safety campaign, Mr. V. A. Sinclair, K.C., chairman of the Ontario Workmen's Compensation Board, referred at last year's annual meeting of the Ontario Safety League to the indirect benefits of safety work; for although the actual number of accidents showed an increase over the previous year due largely to a better system of accident reporting, the compensation had been decreased by half a million dollars. In this way the effects of the work was evident, he said, though the actual results could not be shown by statistics.

Safety Campaign in Ontario

The Industrial Accident Prevention Associations of Ontario will hold their 1927 Safety Convention at the King Edward Hotel, Toronto, on May 9 and 10. The programme committee has already arranged for an excellent programme and has included among the list of speakers Mr. A. O. Dawson, Vice-President, Canadian Cottons Limited, Montreal; Mr. V. A. Sinclair, K.C., Chairman, Workmen's Compensation Board, Toronto; Mr. H. L. Broomfield, General Motors of Canada Limited, Oshawa; and Mr. Louis Blake Duff of Welland.

Mr. W. S. Campbell of the Canadian General Electric Company, is chairman of the Committee on Safety Convention and Mr. F. M. Kimbark, President of Business Systems Limited, Toronto, is Vice-Chairman. The Committee has adopted for its slogan for the 1927 Convention, "1,000 Delegates from 100 Towns and Cities".

At a meeting of the Industrial Accident Prevention Associations of Ontario, held at Toronto in February it was decided to make a renewed effort to secure the adoption of the "Safety plan of 1921" generally throughout the province. This plan, it was claimed, had opened up a new era of accident prevention. It was evolved in 1921 by Mr. R. B. Morley, general manager of the Associations. Industries in Essex County were among the first to adopt it, and the success that has attended its operation suggested a renewed effort to secure the general adoption of the scheme. The new plan was explained in 1921 as follows.—

The reorganization of the Industrial Accident Prevention Associations, as to personnel, is divided under two heads: office staff and inspection staff. The re-organization of the office staff has taken place in part and will be completed gradually.

The inspection staff consists of six inspectors, experienced with the associations from about nine months to five years. The inspectors in most cases, were appointed because of their knowledge of certain classes of industry and the hazards thereof. The result of this has been that each inspector has specialized in his own particular industries, and, in most cases, appears to have studied the physical side of prevention only.

The enormous sums paid out for compensation each year call for drastic action and it is recommended that the present system of inspection should be thoroughly revised by placing an inspector in charge of a designated section of the province, having six, seven or eight such sections under a resident officer with an office and a stenographer.

A man so placed would become a centre for all safety work in his section. He would

become a part of the community life and would devote his whole time to teaching and preaching safety, continuing the inspection work as part of his general campaign.

These inspectors or local secretaries would report once each week to headquarters by mail and once each month in person for a round-table conference.

Penalizing "Unsafe" Employers

The Ontario Retail Lumber Dealers' Association at their tenth annual convention, held recently at Toronto, considered the Workmen's Compensation Act in its application to the lumbering industry. The payroll in the industries in Class 4 (which includes planing mills, sash and door factories, manufacture of wooden boxes, etc.), for the past five years, has run about $11,000,000 per annum. The lowest rate of assessment in Class 4, namely, 30 cents, is paid by plants which only assemble baskets made largely of wood, industries carrying on the assembling, only, of carpet sweepers largely of wood, industries which assemble only, brushes and brooms, industries which manufacture lacrosse sticks, hockey sticks, and tennis rackets, and firms who finish mouldings of picture frames. The highest rate in the class, namely $2 per $100 of payroll, is charged on the manufacture of boxes and packing cases and the manufacture of baskets, largely of wood, including veneer manufacturing. The following figures give the total payroll, the total compensation costs in Class 4 and the average rate over the whole class for the past five years:—

Year	Payroll	Compensation costs	Average rate
	$	$	$
1921	11,453,000 00	217,711 23	1 90
1922	11,210,000 00	195,042 56	1 74
1923	10,952,000 00	194,082 55	1 77
1924	11,583,000 00	184,835 84	1 60
1925	11,464,000 00	200,004 35	1 74

It was reported that at a general meeting of directors of the Industrial Accident Prevention Associations held in Toronto on October 21, 1926, the directors went unanimously on record as approving in principle an additional rate of assessment for those plants who maintain for their own purposes a known hazard. The square head on the jointer was used as an example. Inspectors, in making recommendations for round heads, were sometimes met with the argument that the employer could not afford to purchase a new head and in some other cases the inspector was told that work of all kinds could not be done on the round head. In both of these cases it is assumed that the employer for his own purposes is continuing a known hazard and a memorandum regarding this whole situation is being prepared for the Workmen's Compensation Board.

"Safest Mill in Canada" Contest

About a year ago the *Pulp and Paper Magazine* offered for annual competition a silver shield as a trophy for the "Safest Mill" in the Canadian pulp and paper industry (Labour Gazette, February, 1926, page 144). The winner last year in Class A (having more than 60,000 payroll hours) was the Spruce Falls Power and Paper Company at Kapuskasing, Ontario, with the Laurentide Company, of Grand'Mère, Quebec, as runner-up; the winner in Class B (having less than 60,000 payroll hours) was Don Valley Paper Company, at Toronto, with the Beauharnois, Quebec, Division of the Howard Smith Paper Mills in second place. Mills in every province of Canada in which paper was made took part in the competition and some very interesting records were made. The *Pulp and Paper Magazine* points out that besides helping to create an additional desire for carefulness in the performance of regular duties on the part of the workmen, and for increasing safeguards and reducing hazards on the part of the companies, the contest had the further result of introducing a standard form of reporting accidents that may eventually be a factor in co-ordinating safety work throughout the industry.

The publishers announce that the contest is again open and will be open from year to year; and that the period of competition is from July 1 to December 31 inclusive.

Copies of the regulations for use on bulletin boards, and report forms, as well as subsequent bulletins and further information can be had by addressing the editor of the *Pulp and Paper Magazine,* Gardenvale, Quebec.

Danger of Ethyl Gasoline

Dr. J. G. Cunningham, of the Ontario Department of Public Health, who has been making investigations concerning ethyl gasoline, reports to Hon. Forbes Godfrey that, apart from manufacture and blending, the practical dangers to workers at service stations and garages are: 1. Contact with the fluid, as at filling stations, and to a lesser extent in garages and repair work. 2. Inhalation of lead dust wherever spills and plashes of the fluid have dried. 3. Exposure to exhaust fumes. Where ethyl gasoline is used the exhaust may contain lead in the form of very finely divided particles of lead, which,

unlike the carbon monoxide in the fumes, does not diffuse rapidly, but hangs in the air. Garage workers employed all day in such atmosphere could easily inhale dangerous amounts of lead, and the ordinary dangers of any car owner running his engine in an unventilated inclosure are increased by the addition of lead to his fuel.

Precautions recommended by Dr. Cunningham are that pumps and containers should be labelled "Ethyl gasoline containing tetraethyl lead," and that both workers and the public should be warned against skin contacts and against the use of ethyl gasoline for cleaning or any other purpose than motor fuel. Dr. Cunningham further says they should be warned against the increased danger from exhaust fumes, and in repair shops and filling stations, etc., special attention should be paid to ventilation and prevention of dust.

So far as the blending is concerned, Dr. Godfrey is now satisfied that the blending process as now done by automatic machinery at Sarnia is safe.

Warnings suggested by Dr. Cunningham have been sent out by the Provincial Department of Health.

Bulletin on Silicosis

The Department of Labour of the State of New York recently published a special bulletin on silicosis, the expectation being that a law will be enacted in the near future to afford compensation to industrial workers who are exposed to the hazard of this disease. The bulletin is intended for the use of physicians, containing information as to the diagnosis and treatment of the disease, together with a résumé of the literature on the subject. Silicosis has been the cause of a number of deaths among certain groups of industrial workers, and in the past has often been unrecognized and entered as fibroid phthisis, pulmonary tuberculosis and bronchitis. In compiling this résumé of the literature of silicosis the aim was to make only those references from medical literature in detail which are likely to be of assistance to the general practitioner. It is claimed that there is ample evidence that as a result of a careful study of silicosis the number of cases to be so diagnosed will increase.

By an amendment of 1926 to the Ontario Workmen's Compensation Act silicosis was added to the list of compensable industrial diseases (LABOUR GAZETTE, May, 1926, page 450).

Report on Health Risks in the Textile Industry

The Workers' Health Bureau (New York) has published a preliminary report on medical examinations conducted among a representative group of textile workers of Passaic and vicinity (New Jersey). It was found that out of 404 workers 78 showed evidence of respiratory disturbances. This number included 25 cases of positive and 20 of suspected tuberculosis.

The New Jersey textile workers show 6 times the amount of tuberculosis found by Dr. George M. Price in examinations of 50,000 garment workers in 1923—the rate for garment workers being 1 per cent. Tuberculosis among the New Jersey textile workers is 3 times the amount, or 6 per cent, as against 2 per cent, or 11 cases, found among furriers in a study of 542 workers made in New York City by Dr. Louis I. Harris in 1915. The percentage of tuberculosis among printers is 1.2 per cent as against 6 per cent among textile workers. It is pointed out that the workers in all these groups are engaged in indoor occupations with industrial hazards—heat, dust and fatigue largely controllable. These factors have a direct relation to the rate of tuberculosis in a trade, as have also the question of long hours, low wages and speeding up. In three of the industrial groups—garment workers, furriers and printers, known for their high rate of tuberculosis, progress has been made in steadily reducing the number of cases. Garment workers, furriers and printers are strongly unionized and have made steady gains in increasing wages, shortening hours and improving shop conditions.

The reduction of tuberculosis in these trades, it is claimed, proves that the textile industry need not be necessarily hazardous. Further proof that industrial tuberculosis can be controlled is brought out in statistics of the Prudential Life Insurance Company, which show a decrease in deaths from tuberculosis in eight of the most dangerous trades in the State of New Jersey during the period (1909-1918), while the percentage of details from tuberculosis among textile workers actually increased.

Among the 404 workers examined 77 were engaged in the dyeing and finishing of textiles. In this occupation the number of employees, including men, women and boys in the United States is estimated at about 11,000. Not one of the 77 dye workers examined by the Workers' Health Bureau was free from physical defects. Even the workers who had only been employed a few months complained of constant coughs and colds; 3 of the group had

active tuberculosis and an additional 7 showed symptoms extremely suspicious of tuberculosis; 9 more had bronchitis, pleurisy or asthma; 11 of the 77 were found to have heart disease; 8 out of every 10 complained of severe irritations of the eyes, nose or throat; almost one-third had rheumatic or muscular pains; over one-third were no longer able to digest their food, complaining of acid belching, cramps, nausea and frequent vomiting; over one-third had frequent headaches, 17 per cent were nervous, and 23 per cent had high blood pressure, and almost 7 out of every 10, 68.5 per cent, showed moderate or marked destruction of the red colouring matter of the blood, called anemia.

Dr. Alice Hamilton, consultant to the Bureau, commenting on the report, says:—"In reading the report of the Workers' Health Bureau one gains a vivid impression of an industry which has inherent and well-recognized health hazards, but which is apparently carried on without any regard to these hazards. The unhealthful conditions described as existing in these dye works are almost entirely preventable. The dyeing industry is unhealthful: because of the use of poisonous substances, chiefly in bleaching and in mordanting, and in the use of the dye aniline black, which contains aniline oil; because of the production of steam, the excessive wetness of floors and apparatus; because of the great heat required for drying; because of the sudden changes of temperature to which the workers are subjected, especially in winter. These evils can be done away with almost completely in modern, decently conducted dye works, through the introduction of modern apparatus and methods of ventilation, dry, cool, comfortable dressing rooms and lunch rooms, the control of poisonous compounds and the shortening of hours of work, when contact with poisons or exposure to heat is unavoidable. The atmosphere described in these plants resembles that of the tropics, heavy humid heat. No sane man would go to the tropics and try to keep up his normal rate of exertion, he would know that breakdown would be sure to follow. Yet here tropical conditions are reproduced and men are expected to carry on as if they were working under normal conditions and for ten, eleven, even twelve or more hours per day. It is no wonder that the physical examinations have revealed no single worker in robust health."

Use of Paint Spraying Machines

Mr. E. G. Sheibley, chief engineer and superintendent of the Safety Department of the California Accident Commission, gives the following information in regard to the correct use of paint-spraying machines:—

When lead paint is being applied by means of a spray the workman should so control his nozzle as to restrict the spray to as small an area as possible. A minimum of paint should be released at one time so as to reduce to a minimum the paint cloud which always develops. The workman should also stand to the windward and out of the cloud. Great care must be taken to keep the spray from coating the skin, and working clothes should never be worn off the job. Great cleanliness should be exercised and smoking should be prohibited. Hands which have come in contact with lead paint should never be brought to the eyes or mouth, as lead poisoning may result. Users of the paint spray should provide themselves with a long handle of sufficient length to keep them out of the paint cloud. As a result of investigation it is found that, while a certain amount of lead paint is being used with paint spraying machinery, the majority of sprays used do not contain lead or poisonous materials, which fact eliminates the poisoning hazard.

Very few cases of occupational diseases are reported from the manufacturers of paint, particularly from the larger concerns. This is due to the universal realization of the hazard of handling poisonous materials which go to make up commercial paint. The larger companies provide showers and lockers and consistently enforce strict adherence to a prearranged system of hygiene, which apparently is effective in protecting employees against disease. Employers have consistently provided exhaust systems which provide ample and sufficient ventilation and guard against the possibility of the breathing in by employees of poisonous fumes or dust.

An inquiry recently carried out by the United States Bureau of Labour Statistics into work on behalf of the staff in various branches of manufacturing industries, and in commercial and transport undertakings, shows that there has been a considerable development in industrial medical work, and that the provision of adequate hospital facilities is now much more general than when the last inquiry into the subject was made about ten years ago. Workmen's compensation laws have undoubtedly been an important factor in the development of industrial hospital services.

The Board of Railway Commissioners for Canada, on the application of the Railway Association of Canada, has amended the General Train and Interlocking Rules so as to authorize a standard practice of utilizing marker lamps not lighted so as to indicate the rear of trains during daylight hours, instead of flags as formerly.

NOTES ON VOCATIONAL EDUCATION AND APPRENTICESHIP

Machine Shop Work at the Collegiate Institute and Vocational School, St. Catharines, Ontario

IN reviewing the activities of the machine shop at the Collegiate Institute and Vocational School, at St. Catharines, the machine shop instructor states that the most outstanding feature at the present time is the fine type of student workers in the shop and the enthusiasm that is shown by them towards their work. This applies equally to the regular day technical students and to the evening school students. At the present time there are about two hundred and ten students taking classes in machine shop practice, seventy-five of these being evening school students. The evening school classes in the machine shop this winter have been so large that additional instructors had to be secured and the classes arranged so that on some nights the shop is used by two classes in succession.

The first year day students are at present making a very serviceable machinist's hammer, while some have commenced turning up a lathe centre. Those who are doing bench work are making a pair of pliers. The second year students are working on various projects such as toolmakers' clamps, toolmakers' vise, book-ends or luggage carriers. The third year students are each making a very useful screw-jack and are also machining a number of tool slides for small lathes. The senior students are also called upon to do any repairs or maintenance work that may be required either for the machine shop itself or for any of the school equipment. This often involves a great deal of work, but it is all good practical experience. A new group project which is well under way is the making of three sensitive drill presses. The complete detail drawings are being made in the school drafting department and the patterns for the castings are being made in the woodworking department, and all the machine work will be done in the machine shop.

The school has received excellent reports from those employers who have engaged graduates from the machine shop. Most of these students secured their positions through recommendations from the school.

A Study of the First 100 Apprentices in Pittsburgh's Part-time Apprentice Training Course

The following report respecting apprentice training in Pittsburgh, Pa., by Mr. Wesley M. Rossier, supervisor, appeared in *Industrial Education Magazine* of December, 1926.

In October, 1925, the two vocational schools in Pittsburgh and a number of the leading industries together put into operation a scheme for part-time apprentice training similar to plans in operation in several other cities. Nearly 100 carefully chosen pupils were placed in industry as regular apprentices for periods of two weeks of shop work alternating with two weeks of school work, two boys together holding one job. The plan adopted requires that the boys shall be at least 16 years of age and physically qualified for the given trade, that they shall have completed the eighth grade and a year of school shopwork with good average rank, and that they are willing to become tradesmen in the employ of the company which provides them with training. The minimum entrance wage is placed at $12 per week, with an increase of $1.50 per week every six months until the apprentice begins to work full time.

The plan has proved very successful, and many employers have expressed a desire to employ as full-time apprentices the boys who are working for them on part-time, as soon as they have reached the age of 18 and have completed a year of part-time apprenticeship. In the opinion of the supervisor this combination of school training and industrial work is giving the apprentices a broader training and is placing a better-educated class of workers in the industries.

Vocational Guidance in Industry

The following article by Mr. S. Lewis Land, Educational Director of the National Trade Extension Bureau, Evansville, Indiana, appeared in the *Vocational Guidance Magazine* of February, 1927.

One of the foremost problems in industry to-day is that of adjusting the young worker to his work. Guidance consists of assisting in choosing, preparing for, entering upon, and progressing in a vocation. Schools have probably given more attention to the first two steps in the guidance program, and have possibly neglected the last two phases of the work. Any scheme of guidance which does not make provision for systematic follow-up and supervision of the young worker in employment is incomplete. This responsibility is not with the school alone. It is a joint responsibility between industry and the school.

Industry is more and more taking upon itself the responsibility of providing accurate and reliable information concerning what it has to offer. Trade associations are being organized in the more important trades and in-

dustries. These trade associations maintain educational departments. One of the responsibilities of the educational departments of these associations is to gather, interpret, and make available accurate and reliable information concerning the trade or industry represented. This information contains data as to the nature of the work, duties and responsibilities, possibilities and requirements, advantages and disadvantages, remuneration and hours of work, and the like. Industry can render a service both to the public school and the young worker—as well as to itself—by making available reliable information for present and prospective young workers.

Technical Education in New Zealand

The following article appeared in the Educational Supplement of the London *Times* of Dec. 11, 1926.

In New Zealand those educational activities which are included under the heading "technical" are probably not so well defined nor so clearly demarcated from other educational efforts as is the case of Great Britain. Technical education in New Zealand has come to connote all those aspects of educational work which are administered by the Technical Branch of the Education Department, and certainly include many which are not "technical" in the generally accepted meaning of the word.

As New Zealand is almost wholly a pastoral and farming country, its secondary industries, though not unimportant, are small. If the commercial, transport, and distributing groups are included they do however provide work for a considerable part of the population. Certain secondary industries are very highly developed, and though having outputs sufficient for home consumption only produce articles which in design and workmanship compare favourably with similar articles manufactured in the recognized industrial centres of the world. As an example of this may be mentioned machinery and utensils used in the dairying industry. Other important secondary industries are those connected with housing, e.g., carpentry and joinery; cabinet and furniture making; bricklaying and masonry; plumbing and gas fitting; with the application of electricity to the home; with engineering, repair and upkeep of automobiles, railways, ships; civil engineering, including construction of roads, bridges, and reclaiming of land from swamps and marine lagoons. The clothing trades, in which large numbers of both men and women are employed, is also an important group.

The Apprentices Act.—There are at present some 23 technical schools throughout the Dominion, 15 of which also provide full secondary day courses for boys and girls, and in respect of these courses are known as "technical high schools." Of the technical or trade classes properly so called, giving instruction to apprentices or journeymen, the greater number are to be found in the large centres at Auckland, Wellington, Christchurch, and Dunedin, and such trade classes are held almost exclusively in the evening. This is not regarded as an ideal state of affairs, and partly to obviate this difficulty an "Apprentice Act" was passed in 1923 to regulate the conditions of employment and education of young persons apprenticed to a skilled trade. Provision was in that Act made for attendance of these young persons at technical schools for instruction in vocational and general subjects during the day as part of their trade training. No great advance has yet been made along these lines, owing largely to the cost of the specialized apparatus and machinery necessary for this type of instruction and the difficulty of determining the proper allotment of such cost as between the Government and the employers of labour concerned.

Little provision has hitherto been made for advanced instruction of university standard in applied science and technology; but there are courses in engineering, civil, mechanical, electrical, and mining, at Canterbury College, Christchurch, and somewhat similar ones at Auckland University College. It has generally been found advantageous for advanced students in technology to complete their training abroad, either in Europe or America.

The technical high schools differ one from the other considerably according as to whether they are situated in large towns where only provision is made for secondary education of the more academic type or whether they are only post-primary schools in a country town or district. In the former case the work attempted tends to be more vocational in character, while in the latter a bias is given to science applied to agriculture for the boys and to domestic arts and science for the girls. In addition to this a considerable amount of "educational patching" is done by technical schools of all grades, whereby young people and adults may strive to make good the more obvious gaps in their educational equipment. Provision is made for manual training in woodwork, metalwork, and domestic arts for a large proportion of the older children attending the primary and secondary schools,

and this provision is generally very highly valued by pupils and parents.

Training of Teachers.—On the professional side New Zealand has no institutions for the training of teachers of handicraft and technology, although the desirability of doing something in this direction has been discussed, but no practical solution has yet been put forward. As a rule the teachers are drawn from one of two sources—university graduates in science who have learned to a greater or lesser degree to apply their knowledge to the needs of industry, and the more thoughtful type of artisan who, having the necessary personality and energy, has studied as far as he is able the sciences underlying the particular craft he exercises. There is undoubtedly an unsatisfied demand for teachers and administrators in large technical institutions who, in addition to good cultural qualifications, have a specialized knowledge of such industries and the sciences underlying them as are being or are capable of being actively developed in the Dominion. Teachers have a strong professional association known as the Technical School Teachers' Association, which while guarding carefully the interests of its members has renderd good service generally to the cause of education.

The following statistics, taken from the current annual report, may prove to be of interest. The population of New Zealand in 1924 (exclusive of Maoris), was 1,300,000. In the year 1925 there were 45 centres at which technical classes were held; 15 technical high schools; 5,132 students in technical high schools and 12,966 in other classes; and 274 full-time assistant teachers, in addition to a large number of part-time teachers. The total expenditure by Government on technical education in the financial year in question was £209,183, working out at a cost per head of population (exclusive of Maoris) of 3s. 3d.

A system of "free places" enables any pupil who has satisfactorily completed the primary school course to attend a post-primary school, either secondary or technical, for a period of five continuous years, subject to satisfactory progress being made. Provision is further made for those pupils who have passed the matriculation of the University of New Zealand and have completed a one year's post-matriculation course of study in certain approved subjects to receive free university education. Such students may be awarded bursaries for maintenance, while attendng university courses in agriculture, home science, engineering, dentistry, and medicine. It will thus be seen that the broad highway from the primary schools to the university is an accomplished fact in New Zealand, and statistics show that a very considerable proportion of the youth of the Dominion takes advantage of the facilities offered for higher education. The returns available indicate that about 80 per cent of the pupils entitled to free secondary education actually enter upon full-time secondary courses, and that about 18 per cent of these pupils find their way finally to the universities.

The British Coal Situation

During the months of December, 1926, and January, 1927, the international coal situation has been reverting slowly towards the conditions obtaining before the British coal-stoppage of May 1, 1926. The home demand was being fairly well satisfied in the United Kingdom by the end of January, and, while coal was still arriving in greater or less quantities from Germany, Poland, Czechoslovakia, Spain, South Africa and even India, owing to the operation of long-term contracts concluded during the stoppage, yet the British export trade had revived and British coal was already competing effectively in some of its former German and other European markets.

During December, district agreements were being worked out in Great Britain which resulted in a number of changes in wages and hours. In Scotland the eight-hour day was re-established; in Nottinghamshire, Derbyshire and South Wales, the eight-hour day, with seven hours on Saturday; in Lancashire, a similar arrangement, but with only six hours on Saturday; in Northumberland, Durham and Yorkshire, the 7½-hour day.

By January 8, 966,700 mineworkers were again in employment, as against an average of approximately 1,100,000 before the stoppage. An effort was being made in certain coalfields to organize a Miners' Industrial Union in place of the former Miners' Federation of Great Britain. It is stated that the numerical strength of the Union has reached nearly 9,000 men from 30 collieries.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

The Governing Body of the International Labour Office

THE Governing Body of the International Labour Office held its thirty-fourth session in Geneva on January 28. Dr. W. A. Riddell, Canadian Advisory Officer, in Geneva, attended the session on behalf of the Minister of Labour as one of the Government representatives. Note was taken of the gratifying progress which is being made in the ratification of International Labour Conventions, the number of such ratifications having now reached 215.

The Director supplied information with regard to the international situation of the eight-hour-day question and the possibilities of ratification by Germany, France and Great Britain of the Convention of the International Labour Conference on this subject.

A report was received of the visit which Mr. H. B. Butler, Deputy Director, had made during the past fall to Canada and the United States (Labour Gazette, November, 1926, page 1113).

Proposed Maritime Conference, 1928.—The Governing Body considered the resolution adopted by the ninth session of the International Labour Conference, last June, on the subject of the possible summoning in 1928 of a special Maritime Conference, which should deal more especially with the question of the international regulation of hours of work on board ship. A lively discussion took place, in the course of which the representative of the British Government and the members of the employers' group proposed the postponement of the matter to the next session of the Governing Body. This proposal having been rejected, the Governing Body decided by 13 votes to 9, with one abstention, to give effect to the recommendation adopted by the Joint Maritime Commission on January 22, and to place provisionally on the agenda of a Maritime Conference which would be held in 1928 the question of the international regulation of hours of work on board ship. A final decision on the subject of the summoning and the agenda of this Conference will be taken at the next session of the Governing Body.

Agenda of the 1928 Conference.—The Governing Body was next called upon to decide on the final agenda for the ordinary session of the Conference in 1928. In order to avoid overloading the program for this session, which will possibly be followed by the proposed Maritime Session, it was decided to place on its agenda only the question of the prevention of accidents, including those caused by the coupling of railway rolling-stock.

Intellectual Workers.—A suggestion was made by Mr. de Michelis, representative of the Italian Government, in favour of the establishment of a permanent committee on intellectual work. The Director was authorized to prepare a report on this subject for consideration at the next session of the Governing Body.

The next session of the Governing Body will be held in Geneva on March 31 and following days.

Joint Maritime Commission

The Joint Maritime Commission of the International Labour Organization at a meeting in Geneva from January 20-22, 1927, adopted a resolution by seven votes to five recommending the Governing Body of the International Labour Office to include the question of the regulation of hours of work on board ship in the agenda of a maritime session of the Conference in 1928. The opinion of the Commission was requested, in conformity with a resolution of the 1926 Conference, on the advisability of including the question of the regulation of hours of work on board ship in the agenda of a maritime session of the Conference in 1928.

The shipowners' representatives declared that it did not appear to them to be possible to apply the eight-hour day in a uniform manner aboard ship, and they were therefore not in favour of bringing the problem now before an international conference. They contended that the Peace Treaty had dealt with the eight-hour day only as an ideal to be attained, and that the special and complicated conditions of maritime navigation made it impossible at present to alter the established system in order to comply with general principles.

The seamen's representatives pointed out that the reduction of hours of work in the merchant marine was contemplated so long ago as 1919 by the Washington Conference, and further that the question now was that of giving effect to a resolution formally adopted by the Conference last June, to the effect that the possibility of the international regulation of hours of work in ships should be considered, and not that a strict rule of eight hours a day or forty-eight hours a week should be established forthwith. The principles laid down by the Washington Conference, as well as the interests of economic peace and social

progress, demanded that maritime undertakings should not be behind industrial or agricultural undertakings, but that they should endeavour, in their turn, to reduce hours of labour according to suitable rules.

Some of the members of the Commission stated that the application of the Eight Hour Act in the French merchant marine had led to a more rational organization of work, and that its results had been, on the whole, favourable.

A favourable reception was given by the Commission to the idea of including in the agenda of the next Maritime Conference, with a view to a recommendation, the question of conditions under which seamen live in the ports. The Commission approved also of the plan of inquiry proposed by the International Labour Office with regard to conditions of work in sponge-fishing and pearl-fishing.

The Commission unanimously proposed that two other questions should be placed on the agenda of this session, namely, (1) the protection of seafarers in case of sickness, including the treatment of the injured on board, and (2) the improvement of the conditions of life of seamen in ports.

It was decided to suggest to the Governing Body that the number of members of each group—shipowners and seamen—should be raised from five to seven.

Germany and the Hours Convention

According to the German press, the statement of principles on which the Federal Chancellor recently came to an agreement with the National Party, in connection with the formation of the new government of Germany, embodied a declaration on social policy which included the following:

The next step in this direction is to create an extensive body of law for the protection of the workers, special consideration being given to miners. Such legislation, while based on German conditions, should fix hours of work, including Sunday rest, in accordance with international agreements. On the basis of such legislation, the German Government is prepared to ratify the Washington Convention at the same time as other industrial countries of Western Europe. Until this law comes into force, any unsatisfactory conditions with regard to hours of work should be remedied by transitional and emergency measures. Social reform must also be promoted internationally, particularly in co-operation with the International Labour Office.

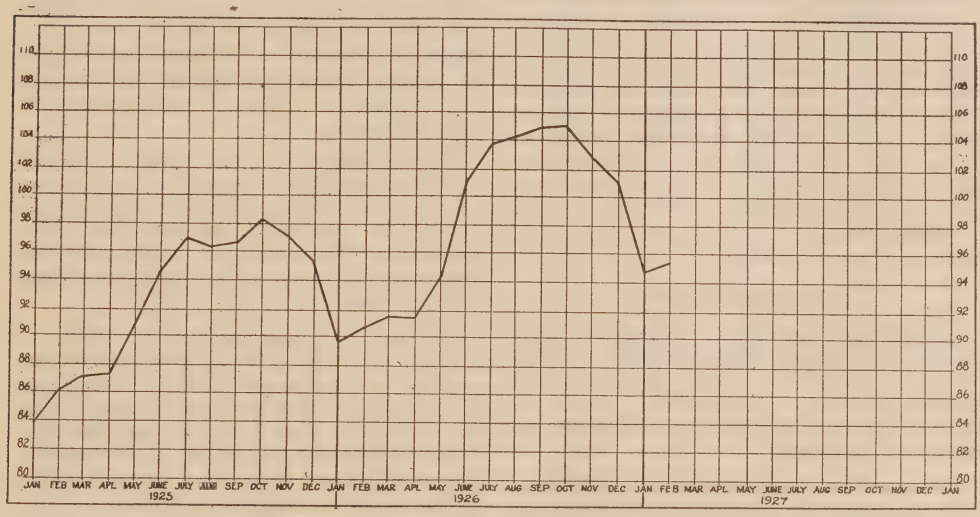
In this connection attention may be drawn to an article published in the February issue of the *International Labour Review,* in which Dr. Feig (Ministerial Councillor in the Federal Ministry of Labour, and representative of the German Government on the Governing Body of the International Labour Office) gives an account of the origin, general principles and main provisions of the Labour Protection Bill presented to the Federal Minister of Labour at the beginning of last December to the Provisional Federal Economic Council and the Federal Council.

The Bill is intended to make it possible to ratify various Conventions, in particular that on the eight-hour day. In the German view, however, ratification is impossible until German legislation has been brought into agreement with the Convention to be ratified. This means that the Labour Protection Bill must be passed by the Reichstag, and also that no amendments can be allowed which make ratification impossible. The ratification of the Hours Convention is further dependent on the adoption of a Mining Act to regulate the hours of underground miners, which is now being drafted. After that, ratification by Germany may be expected, subject to ratification by the other chief industrial states as well.

Holland and the Hours Convention

In the Netherlands, a bill which in effect would authorize the ratification of the Washington Hours Convention was introduced some years ago, but has not yet been proceeded with. The Minister of Labour, Commerce and Industry in a memorandum in reply to the report of the Second Chamber of the States General on the budget for his Department for 1926-27, recalled that when this Bill was introduced it was definitely stipulated that ratification should be effected only on condition of ratification by a sufficient number of States whose competition in the industrial world was to be feared. The minister holds that, failing the fulfilment of his condition, and having regard also to certain of the detailed provisions of the Convention itself, it is not yet possible to proceed to ratification. At the same time, he declares that the Netherlands will continue to act in the spirit of the Convention.

The Pacific Coast Coal Freighters, Limited, recently brought actions against two insurance companies to recover upon two policies of marine insurance for the total loss of an insured vessel which was unseaworthy through being overloaded. The British Columbia Supreme Court found in favour of the plaintiff, ruling that it was no defense against such action that the vessel in question was overloaded, where such overloading was done without the knowledge or privity of the owners.



THE EMPLOYMENT SITUATION AT THE BEGINNING OF FEBRUARY, 1927, AS REPORTED BY THE EMPLOYERS MAKING RETURNS TO THE DOMINION BUREAU OF STATISTICS

THERE was an increase in employment at the beginning of February, although the situation was still affected to some extent by inventory shutdowns, and more so by continued seasonal slackness in the out-of-door industries. Employment, however, was in much greater volume than on the same date in any of the six preceding years. The Dominion Bureau of Statistics tabulated returns from 5,817 firms, whose staffs aggregated 788,887 persons, as compared with 784,484 on January 1. The index number stood at 95.4 on the date under review, while in the preceding month it was 94.8 and on February 1, 1926, 1925, 1924, 1923, 1922 and 1921 it was 90.7, 86.1, 90.6, 89.5, 78.9 and 90.1, respectively.

Substantial recovery was shown in manufacturing, and logging also reported improvement. On the other hand, construction, trade and transportation registered large seasonal declines.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month, as indicated by the firms reporting, in comparison with the number of employees they reported in January, 1920, as 100.

Employment by Economic Areas

There were reductions in employment in the Maritime and Prairie Provinces but elsewhere the tendency was upward.

Maritime Provinces.—Large losses in construction, together with less extensive contractions in manufacturing, coal-mining, transportation and trade, caused a considerable falling off in employment in the Maritime Provinces. The situation, however, continued to be slightly better than on the corresponding date last year, although moderate gains were then indicated. Statements were received from 484 firms employing 64,656 workers, compared with 66,941 on January 1, 1927.

Quebec.—The recovery in Quebec caused the reinstatement of practically the same number of workers as at the beginning of February, 1926, when employment was in much smaller volume. Manufacturing, especially the textile, tobacco and beverage, pulp and paper and rubber industries reported considerable improvement; logging and mining were also busier, but there were pronounced declines in construction, trade and transportation. The working forces of the 1,276 co-operating employers aggregated 223,940 persons, as against 221,054 in the last report.

Ontario.—Important gains were made in manufacturing, notably in iron and steel, lumber and textile factories. Logging also reported heightened activity. On the other hand, trade, construction and transportation were seasonally slacker. According to data received from 2,676 firms, their staffs rose

from 323,536 at the beginning of January to 328,462 on the date under review. This increase was rather smaller than on February 1, 1926, but the index then was over four points lower.

Prairie Provinces.—The curtailment in employment in the Prairie Provinces involved fewer workers than on the corresponding date last year, when the index stood at 90.7, as compared with 97.2 on February 1, 1927. Statistics were tabulated from 762 employers whose staffs declined by 3,411 persons to 103,558 on the date under review. The food, lumber and iron and steel industries reported reductions, as did transportation, construction and trade, that in the groups last named being of a seasonal character. Logging, pulp and paper and textiles, however, registered improvement.

British Columbia.—The additions to staffs recorded at the beginning of February exceeded those noted in the same month in 1926, but employment then was slightly more active. The working forces of the 619 reporting firms aggregated 68,271, an increase of 2,287 workers over their January 1 staffs. There was considerable recovery in manufacturing, particularly in the lumber, pulp and paper and metal industries. Logging also showed important gains, but there were losses in trade and construction.

Index numbers of employment by economic areas are given in Table I.

Employment by Cities

Of the eight cities for which separate tabulations are made, four—Montreal, Ottawa, Windsor and the other border cities, and Vancouver—registered improvement, while in Quebec, Toronto, Hamilton and Winnipeg the trend was downward.

Montreal. — Manufactures in Montreal showed substantial recovery, especially in the textile, tobacco and iron and steel industries; seasonal losses in trade, construction and transportation, however, reduced the general level of employment. Data were received from 692 firms employing 105,930 workers, as compared with 105,727 in the preceding month. This gain exceeded that registered on February 1, 1926, when the situation was less favourable.

Quebec.—According to returns received from 89 firms in Quebec, they decreased their staffs by 341 persons to 8,807 at the beginning of February; construction showed the greatest seasonal losses, but trade and transportation were also slacker. The index was higher than on the corresponding date last year, when no general change was shown.

Toronto.—Following the very marked activity incidental to the Christmas and New Year season there was a considerable falling off in employment in trade on February 1, which more than offset large gains in manufacturing, notably in iron and steel, food, textile, tobacco and beverage factories. Construction also released employees. The result was a reduction of 472 persons in the forces of the 772 co-operating firms, who had 96,565 employees. Practically no change was recorded on February 1, 1926, but employment was then in much smaller volume.

Ottawa.—Manufacturing was busier, while trade showed some curtailment, according to 125 firms employing 9,404 persons. The index was rather higher than on the corresponding date last year.

Hamilton.—The situation in Hamilton showed no general change; manufacturing was quiet, while transportation afforded rather more employment. Statistics were tabulated from 200 employers with 28,298 workers, or almost the same as at the beginning of January. Employment was in greater volume than on February 1, 1926, although gains were then indicated.

Windsor and other Border Cities.—Substantial improvement was noted in the Border Cities, where 4,380 persons were reinstated by the 89 reporting firms, who had 10,991 employees. The level of employment was practically the same as on the corresponding date last year.

Winnipeg. — Employment in Winnipeg showed contraction; trade and construction recorded reduced activity, while manufacturing was busier. Returns were tabulated from 284 employers, whose payrolls declined from 27,748 on January 1 to 27,342 on February 1. The situation was much more favourable than on the corresponding date a year ago.

Vancouver.—The metal, food, construction and transportation groups reported expansion, while trade was seasonally slacker. A combined working force of 24,020 persons was reported by the 227 firms making returns, who had 23,240 employees in the preceding month. Employment was rather more active than at the beginning of February, 1926, when improvement was also indicated.

Index numbers of employment by cities are given in Table II.

Manufacturing Industries

The revival in manufactures on February 1 was more marked than on the corresponding date of 1926 and the index was nearly five points higher. Statements were tabulated from

NOTE.—Number employed by the reporting firms in January, 1920=100 in every case. The "relative weight" shows the proportion of employees in the indicated area to the total number of employees reported in Canada on the date under review.

Relative weight of employment by cities as at February 1, 1927	13·4	1·1	12·2	1·2	3·6	1·4	3·5	3·0

3,729 manufacturers employing 448,417 operatives, compared with 433,027 in the preceding month. The most marked recovery was in iron and steel, textile, lumber, pulp and paper, tobacco, distilled and malt liquors and rubber works. Animal food, building material and musical instrument factories, on the other hand, showed seasonal losses in personnel.

Animal Products—Edible.—There was a further though much smaller decline in employment in this group at the beginning of February; the reduction was also less than on the corresponding date last year, when the index number was considerably lower. Statements were tabulated from 154 firms employing 14,471 workers, as compared with 14,-

TABLE III.—INDEX NUMBERS OF EMPLOYMENT IN CANADA BY INDUSTRIES (JAN. 1920 = 100)

Industries	[1]Relative Weight	Feb. 1 1927	Jan. 1 1927	Feb. 1 1926	Feb. 1 1925	Feb. 1 1924	Feb. 1 1923

All Industries	100·0	95·4	94·8	90·7	86·1	90·6	89·5

[1]NOTE.—The "relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

942 in the preceding month. Fish smoking and curing and meat packing plants showed the largest losses, which took place to a considerable extent in the Maritime and Prairie Provinces.

Leather and Products.—Employment in boot and shoe and glove factories showed an increase, which was less extensive than that noted on February 1, 1926. The situation then, however, was not so favourable as on the date under review. A combined working force of 17,860 persons was reported by the 192 co-operating manufacturers, who had 17,655 employees at the beginning of January. Most of the gain took place in Quebec and Ontario.

Lumber and Products.—The commencement of seasonal activity in sawmills caused a considerable increase in employment, while there was also improvement in furniture, match and container factories; 2,238 workers were added to the staffs of the 673 firms making returns, who had 40,300. This increase was a good deal larger than that registered at the beginning of February a year ago, but the index number then was very slightly lower than on the date under review.

Musical Instruments.—There was a further but somewhat smaller curtailment in employment in musical instrument factories, 39 of which reduced their payrolls from 3,322 persons on January 1 to 3,141 on February 1. Practically all this decrease was in Quebec, while the tendency in Ontario was upward. Somewhat greater contractions were noted on February 1, 1926, and the index number then was 10 points lower.

Plant Products—Edible.—Partial recovery from the heavy seasonal losses recorded in the preceding month were registered in this division at the beginning of February, when the 306 reporting establishments enlarged their payrolls by 309 employees to 25,171. The gains in biscuit and confectionery plants were most marked, while sugar and syrup factories and canneries showed further declines. Slightly smaller gains were noted on the corresponding date last year, but the index number then was practically the same.

Pulp and Paper.—The addition to staffs recorded in pulp and paper were larger than on February 1 of previous years of the record, while the situation continued to compare very favourably with preceding years. Data were received from 448 employers with 55,964 workers, as against 54,497 at the beginning of January. The largest increases were in pulp and paper mills, but other branches of this group were also busier. There were general gains in all except the Maritime Provinces, where conditions remained practically the same as in the last report.

Rubber Products.—Considerable expansion in employment was shown in rubber factories, 32 of which added 780 workers to their payrolls, bringing them to 13,526 at the beginning of February. This increase, which contrasts with the loss noted on the corresponding date last year, was confined almost entirely to Quebec and Ontario. The index number was somewhat higher than on February 1, 1926.

Textile Products.—The increase in employment in the reporting factories was greater than the decrease recorded at the first of the year; employment continued at a slightly higher level than at the beginning of February a year ago, while the situation was considerably better than in that month in earlier years of the record. Cotton, woollen, knitting, headwear, garment and personal furnishing establishments registered important increases in activity. The working force of the 512 co-operating firms aggregated 73,088 persons, as compared with 70,439 in their last report. Ontario and Quebec showed especially pronounced improvement, but the tendency was generally upward.

Tobacco, Distilled and Malt Liquors.—Almost complete recovery from the losses recorded at the beginning of January were noted in the tobacco, distilled and malt liquor branch, in which the improvement was more pronounced than on February 1, 1926, when the index number was almost 13 points lower. Returns were tabulated from 106 manufacturers with 12,272 employees, or 1,411 more than in the preceding month. The bulk of this gain took place in Quebec and Ontario.

Chemicals and Allied Products.—Statements were compiled from 112 firms in this group, whose staffs rose from 6,160 persons on January 1 to 6,522 at the beginning of February. Practically all this improvement took place in Ontario. Employment was in greater volume than at the beginning of February of last year, when the increase was on a much smaller scale.

Clay, Glass and Stone Products.—Further contractions of a seasonal character were recorded in this group, all branches of which shared in the seasonal losses. According to 109 manufacturers, their staffs included 8,689 workers, or 322 less than in the preceding month. Similar reductions were noted on the corresponding date last year, but the index number then was over 14 points lower.

Iron and Steel Products.—There were large increases in employment in iron and steel factories at the beginning of February, par-

ticularly in automobile and other vehicle, agricultural implement, general plant machinery, pipe and other iron and steel plants and in rolling mills. There were reductions in the Maritime and Prairie Provinces, but elsewhere the tendency was upward, the largest gains taking place in Ontario. Somewhat greater gains were indicated on February 1, 1926, but employment then was at a lower level. Statistics were tabulated from 643 firms whose staffs stood at 125,165 persons as compared with 118,559 on January 1, 1927.

Non-Ferrous Metal Products.—Lead, tin, zinc and copper works reported augmented activity, while comparatively little change was shown in other branches of the non-ferrous metal group. The general gain was greater than on the corresponding date last year, when the index number was some 13 points lower. The working force of the 106 co-operating firms included 15,292 employees, or 498 more than at the beginning of January. Practically all the improvement was in Ontario and British Columbia, while in Quebec contractions were indicated.

Logging

Seasonal expansion was recorded in logging camps at the beginning of February; the increase was somewhat smaller than on the corresponding date of 1926, but the index number then was slightly lower. Statements were received from 228 operators employing 34,632 workers, as against 31,245 in the preceding month. All provinces shared in the upward movement, which was most marked in Quebec and British Columbia.

Mining

Coal.—There were further reductions in employment in coal mines, but on a smaller scale than on February 1 last year, or of 1925, in both of which the index number was lower than on the date under review. The payrolls of the 89 reporting mines totalled 27,422, a loss of 612 employees as compared with the preceding month. The Maritime Provinces and British Columbia registered the greatest decreases.

Metallic Ores.—Forty-seven operators in this division reported 11,354 workers, compared with 11,218 at the beginning of January. There were general but comparatively small increases in all except the Prairie and Maritime Provinces. Employment continued at a higher level than on February 1, 1926, when practically no change was shown.

Non-Metallic Minerals (Other than Coal).—Partial recovery from the losses recorded at the beginning of the year was noted in this group, in which 66 employers reported 5,745 persons, as compared with 5,551 in the last returns. The largest gains were in Quebec. The situation was better than at the beginning of February, 1926, when the movement was also favourable.

Transportation

Street Railways and Cartage.—There was an upward trend in employment in this division on February 1, 1927, in contrast with the losses that are usually reported on that date. The index number was a little higher than in the same month in 1925 and 1926. The 112 co-operating employers had 19,158 persons on payroll, or 255 more than in the preceding month. Quebec and Ontario registered most of the increases.

Steam Railways.—Seasonal contractions, involving practically the same number of workers as on February 1 a year ago, were shown in steam railway operation, but employment was at a slightly higher level on the date under review. Returns were compiled from 101 companies and branches in this group, whose staffs aggregated 75,236 persons, as compared with 77,968 on January 1. All except the Maritime Provinces recorded curtailment.

Shipping and Stevedoring.—Employment in water transportation continued to show seasonal contractions; 43 employers released 1,211 workers from their payroll, bringing them to 10,570 on February 1. There were losses in the Maritime Provinces, Quebec and Ontario, while in British Columbia the tendency was upward. Practically no change in employment was noted on the corresponding date last year, but the situation then was slightly less favourable.

Construction and Maintenance

Building.—Although the number of persons released in building was larger than on the corresponding date in 1926, the index number on February 1 was considerably higher. Statistics were received from 336 contractors with 25,734 persons in their employ, as against 27,749 on January 1. British Columbia reported improvement, but elsewhere seasonal curtailment was indicated, that in Quebec being the most marked.

Highway.—The number of persons employed by 98 firms on highway construction and maintenance was 3,725 or 1,661 less than at the beginning of January. The seasonal declines in Ontario were most extensive, although reductions were noted in all provinces except Quebec. More pronounced recessions were in-

dicated on February 1, 1926, when the employment afforded was much the same as on the date under review.

Railway.—Continued, but smaller contractions were noted in employment in railway construction and maintenance, but the decline was more extensive than on the same date a year ago. The index number then, however, was lower. Statements were tabulated from 31 employers in this group, with 27,510 persons on payroll, as compared with 29,366 in the last report. Quebec showed improvement, but in the remaining provinces reductions in personnel were registered.

Trade

Following the unusually marked increases in employment recorded at Christmas and the New Year, and in the active season preceding the holidays, there was a considerable falling off in the number of persons employed in trade on February 1. Although the losses exceeded those noted on the corresponding date in previous years, employment continued at a higher level than in the years 1921-1925; it was also better than on the same date last year. The 573 trading establishments furnishing data reduced their payrolls from 65,695 employees on January 1 to 61,024 at the beginning of February. The bulk of the shrinkage was in retail establishments. There were losses in all provinces, but Ontario registered the greatest curtailment.

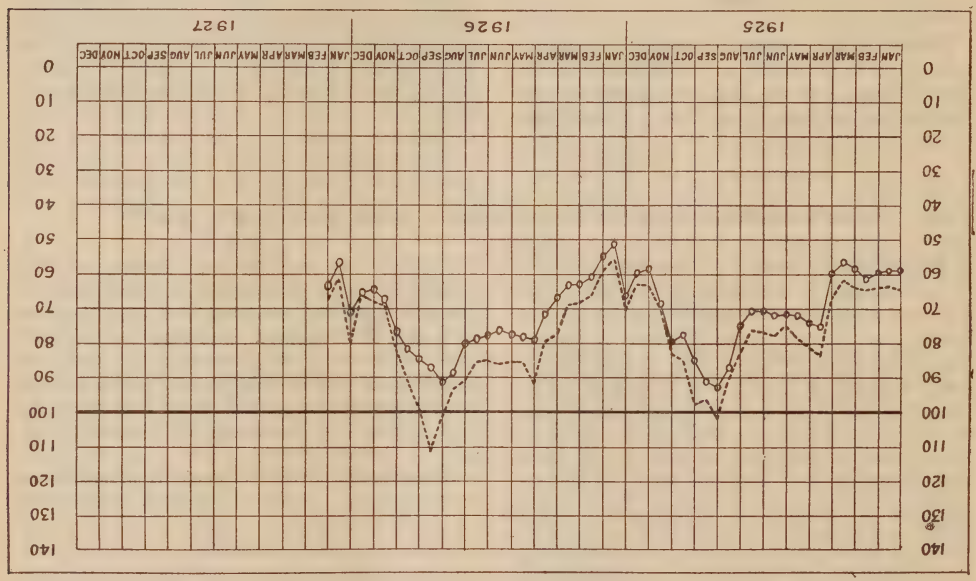
Tables I, II and III give index numbers of employment by economic areas, leading cities and industries, respectively. The columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on February 1, 1927.

EMPLOYMENT OFFICE REPORTS FOR JANUARY, 1927

DURING the month of January, 1927, the volume of business as shown by the average daily placements effected by the offices of the Employment Service of Canada was 10 per cent less than that transacted during the previous month, but a gain of 12 per cent was shown when a comparison was made with the records of January, 1926. Reduced placements in construction and maintenance, transportation and farming were mainly responsible for the declines from the previous month. Slight contractions were also registered in other groups, which were partly offset, however, by increased placements in manufacturing and logging. The gain over last year was primarily due to increased placements in the logging industry, although smaller gains were also registered in manufacturing, farming, mining, services and trade.

The accompanying chart shows the trend of employment since January, 1925, as represented by the ratio of vacancies notified and placements effected for each 100 applications for work registered at the offices of the service throughout Canada, the computations being made semi-monthly. It will be seen that the curves of vacancies and placements in relation to applications declined sharply during the first half of the month, but showed an upward trend during the latter half of the month under review. In both instances the ratios of vacancies and placements to applications were considerably higher than those shown during January last year. The ratio of vacancies to each 100 applications was 61.3 and 67.6 during the first and second half of January, 1927, in contrast with the ratio of 55.9 and 59.4 during the same periods in 1926. The ratio of placements to each 100 applications during the period under review was 56.6 and 63.4 as compared with 51.2 and 54.7 during the corresponding month a year ago.

A summary of the reports from the offices shows that the average number of applications recorded during the first half of January was 1,585 as compared with 1,227 during the preceding period, and with 1,619 daily during the corresponding period of 1926. Applications for work registered during the latter half of the month registered 1,282 daily, in contrast with 1,274 daily during the latter half of January a year ago.



Employers notified the Service of a daily average of 972 vacancies during the first half, and 867 during the latter half of the month under review, as compared with a daily average of 905 and 758 vacancies during the month of January, 1926. Vacancies offered to the Service during the latter half of December, 1926, averaged 984 daily.

The Service effected an average of 896 placements during the first half of January, 1927, of which 594 were in regular employment and 302 in work of one week's duration or less, as compared with a total average placement during the preceding period of 874 daily and with 829 daily during the first half

of January, 1926. During the latter half of the month under review, placements averaged 813 daily (561 regular and 252 casual) as compared with an average of 698 daily during the corresponding period a year ago.

During the month of January, 1927, the offices of the Service referred 22,664 persons to vacancies and effected a total of 21,311 placements. Of these the placements in regular employment numbered 14,424, of which 11,379 were of men and 3,045 of women, while placements in casual work totalled 6,887. Opportunities for employment numbered 15,507 for men and 7,415 for women, a total of 22,922. The number of applications for work was 35,675, of which 25,561 were from men and 10,114 from women.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

The following table gives the placements effected to date in the offices of the Employment Service of Canada:—

Year	Placements		
	Regular	Casual	Totals
1919 (10 months)	268,001	37,904	305,905
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927 (1 month)	14,424	6,887	21,311

NOVA SCOTIA

There was a decline of over 18 per cent in the number of positions offered through employment offices in Nova Scotia during January when compared with the preceding month, but a gain of nearly two per cent in comparison with the corresponding month last year. Placements were nearly 19 per cent lower than in December, but over 7 per cent higher than during January, 1926. Increased placements of household workers and building and construction workers were responsible for the gains over the corresponding month last year, but were offset in part by minor reductions in all other groups except farming where the gain was nominal only. Industrial groups in which most of the placements were effected during the month were: manufacturing, 52; logging, 63; construction and maintenance, 92; and services, 279, of which 204 were of household workers. Placements in regular employment numbered 176 of men and 94 of women.

NEW BRUNSWICK

The demand for workers as indicated by orders listed at offices in New Brunswick during January was over 31 per cent less than in the preceding month and nearly 27 per cent below the corresponding month last year. Placements also were about 27 per cent lower

* 7 placements effected by offices since closed.

than in both of these months. Farming was the only industrial group where placements exceeded January of last year and in this the gain was nominal only. Logging placements numbered 68 and services 417, of which 259 were of household workers. During the month 122 men and 58 women were placed in regular employment.

QUEBEC

During January offices in the province of Quebec received orders for nearly 38 per cent more workers than in the preceding month and over 45 per cent more than during the corresponding month last year. Placements were over 17 per cent higher than in December and nearly 29 per cent in excess of January, 1926. All industrial groups except services and trade participated in the gains in placements over the corresponding month last year, those in logging being the most pronounced. Placements by industries included: manufacturing, 119; logging, 924; construction and maintenance, 189; and services, 366, of which 304 were of household workers. Regular employment was found for 1,214 men and 386 women during the month.

ONTARIO

Orders listed at Ontario offices during January called for 18 per cent fewer workers than in December, but nearly 7 per cent more than in January last year. Placements during January were over 15 per cent lower than in the preceding month, but more than 9 per cent higher than in the corresponding month of 1926. All groups except farming, communication, transportation, construction and maintenance and finance showed gains in placements over last year, those in the manufacturing industries and logging being the most pronounced. Industrial groups in which most of the placements were effected during the month were: manufacturing, 1,223; logging, 2,614; farming, 392; mining, 63; transportation, 172; construction and maintenance, 1,965; trade, 305; and services, 2,785, of which 1,892 were of household workers. Placements in regular employment during the month numbered 5,256 of men and 1,151 of women.

MANITOBA

Opportunities for employment as indicated by orders listed at offices in Manitoba during January were over 6 per cent less than in the preceding month, but 41 per cent higher than in the corresponding month last year. Placements declined over 11 per cent from December but were over 31 per cent higher than in January last year. Placements were higher than in January, 1926, in all industrial groups, the gains being most marked in logging and farming. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 96; logging, 917; farming, 448; trade, 188; and services, 1,469, of which 1,139 were of household workers. During the month 1,491 men and 499 women were placed in regular employment.

SASKATCHEWAN

There was a decline of nearly 11 per cent in the number of positions offered through offices in Saskatchewan during January when compared with the preceding month, but a gain of over 3 per cent in comparison with the corresponding month last year. Placements were nearly 17 per cent less than in December, but over 19 per cent higher than in January, 1926. All industrial groups participated in the gains in placements over January last year, the most noteworthy increases being in farming and construction and maintenance. Placements by industrial groups included: logging, 280; farming, 473; construction and maintenance, 187; trade, 62; and services, 692, of which 464 were of household workers. Regular employment was procured for 969 men and 332 women during the month.

ALBERTA

Employment opportunities as indicated by orders listed at offices in Alberta during January were over 6 per cent less than in the preceding month, but nearly 18 per cent better than during the corresponding month last year. There was a decline of over 6 per cent in placements in comparison with December, but a gain of nearly 20 per cent when compared with January, 1926. Farming, services and trade were the only groups in which less placements were made than during January last year. The most noteworthy gain was in the logging industry. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 158; logging, 783; farming, 296; mining, 72; construction and maintenance, 192; and services, 530, of which 407 were of household workers. During the month 1,480 men and 288 women were placed in regular employment.

BRITISH COLUMBIA

During the month of January positions offered through employment offices in British Columbia were nearly 24 per cent less than in the preceding month and over 5 per cent less than in the corresponding month last year. Placements also declined over 25 per

cent from December, and nearly 6 per cent in comparison with January, 1926. Fewer placements than last year were made in all industrial groups except logging, farming, mining and trade and in these the gains were small. Industrial groups in which most of the placements were effected during the month included: manufacturing, 222; logging, 368; farming, 73; transportation, 105; construction and maintenance, 189; trade, 115; and services, 695, of which 416 were of household workers. Regular employment was secured for 671 men and 237 women during the month.

Movement of Labour

During January, 1927, the offices of the Employment Service of Canada effected 14,424 placements in regular employment, of which 8,876 were persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 2,408 were granted the Employment Service reduced rate, 1,625 going to points within the same province as the despatching office, and 783 to other provinces. The reduced transportation rate, which is 2.7 cents per mile, with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment, for which no workers are available locally.

The certificates issued in Quebec numbered 497, of which 431 were for provincial points, and 66 for other provinces. Within the province, Montreal transferred 251 bushmen, Quebec 170 bushmen, and Sherbrooke 10 bushmen, all to logging districts in their respective zones. The movement without the province was all from the Hull office, and included 53 bushmen travelling to camps near North Bay, and 13 bushmen to Sudbury.

In Ontario 798 persons travelled at the reduced rate, 660 within the province and 138 to outside districts. Provincially, 597 of the transfers were for bushmen going to camps in Northern Ontario. The Port Arthur zone received 6 miners from Cobalt, 1 machinist from St. Catharines, 2 powder men, 1 boilermaker, 1 machinist, 2 blacksmiths, 3 riggers, 1 timekeeper and 1 store checker from Toronto, and 10 construction labourers transferred from the Port Arthur office. Sudbury sent 1 cook to each of the Ottawa and Sudbury zones, Windsor 1 die sinker to St. Catharines, and 2 die makers to Oshawa, Pembroke 8 teamsters to Cobalt and 1 construction labourer to Timmins, and Fort William 21 construction labourers to points within its own zone. The interprovincial movement was to the Hull zone, 135 bushmen travelling from North Bay and 3 miners from Sudbury.

The offices in Manitoba granted certificates to 648 persons, 134 of whom went to points within the province, and 514 to other provinces. Of those going outside the province, 494 were for Port Arthur and surrounding districts, and included 477 bushmen, 8 cooks, 4 female hotel workers, 2 carpenters, 1 blacksmith, 1 hoisting engineer and 1 electrician, all of whom were transported from Winnipeg. In addittion 15 farm hands, 3 farm domestics, and 1 female hotel worker travelled to Saskatchewan points, and 1 tile setter to Calgary, also from Winnipeg. Within the province Winnipeg transferred 82 farm hands, 7 farm domestics, 5 female hotel workers and 1 hospital general to the Brandon zone, 11 bushmen, 1 baker, 1 farm labourer and 7 hotel and household workers to Dauphin and 13 farm hands, 3 farm domestics and 1 bushman to points in the Winnipeg zone. The Dauphin zone received 2 bushmen, 1 sent from each of the Brandon and Dauphin offices.

Saskatchewan offices issued 237 certificates, 174 provincial and 63 interprovincial. The provincial movement was principally toward the logging districts of the province, 135 bushmen being transferred, the majority to points around Prince Albert. Of these the Saskatoon, Moose Jaw, Regina and Prince Albert offices each effected a number of the transfers. In addition 28 farm hands were distributed rather generally through various parts of the province, mostly from the Saskatoon and Regina offices. The remainder included 1 tinsmith despatched from Moose Jaw to employment within its own zone, and 10 hotel and household workers to various provincial points. Of those going to other provinces, Moose Jaw transferred 37 bushmen to the Fort William zone and 2 carpenters to Lethbridge; and from Regina 23 bushmen travelled to employment in the Dauphin zone and one carpenter to Calgary.

In Alberta 163 persons benefited by the reduced rate, 1 farm hand and 1 housekeeper going from Edmonton to Saskatoon, and the remainder to various points in the province. Of the latter, Calgary issued certificates to 5 bushmen and 1 housekeeper going to Edmonton, 3 farm hands and 1 housekeeper to Drumheller, 2 machinists to Lethbridge, and 17 bushmen, 2 housekeepers, 4 female hotel workers and 1 farm hand to points within the Calgary zone. From Medicine Hat 1 farm domestic was sent to Calgary, and from Edmonton 7 plasterers, 4 bricklayers and 2 tile setters were destined to the Calgary zone, 1 labourer and 1 harnessmaker to Drumheller, and 43 bush workers, 11 teamsters, 10 sawyers,

12 farm hands, 8 labourers, 7 mine workers, 1 handyman, 1 engineer and 16 hotel and household workers to employment within the Edmonton zone.

All certificates granted in British Columbia were for provincial points, and numbered 65. Prince George transferred 29 bushmen to points within its own zone and 2 bushmen to Prince Rupert, while the Nelson and Prince Rupert offices each despatched 5 bushmen to points within their respective zones. From Vancouver 2 bushmen and 2 miners were transported to Kamloops, 5 bushmen to Revelstoke, 1 engineer to Prince George, 1 planer man and 1 carpenter to Nelson, 1 engineer and 1 baker to Penticton, and 4 mine workers, 2 bushmen, 1 blacksmith, 1 cook and 1 orderly within the Vancouver zone. In addition 1 farm hand travelled from Penticton to employment within its own zone.

Of the 2,408 workers who benefited by the Employment Service reduced transportation rate, 1,736 were carried by the Canadian National railway, 467 by the Canadian Pacific railway, 194 by the Temiskaming and Northern Ontario railway, 6 by the Pacific Great Eastern railway, 4 by the Edmonton, Dunvegan and British Columbia railway, and 1 by the Kettle Valley railway.

BUILDING PERMITS ISSUED IN CANADA IN JANUARY, 1927

THERE was a seasonal decline in the value of the building permits issued by 63 cities during January as compared with the preceding month, but the aggregate was higher than in January, 1926. The co-operating municipalities reported permits for building estimated to cost $5,429,299, as compared with $11,508,818 in December, 1926, and $4,719,534 in the corresponding month last year. There was, therefore, a reduction of 52.8 per cent in the former, and an increase of 15.0 per cent in the latter, more significant, comparison.

Some 50 cities furnished detailed statements showing that they had granted almost 500 permits for dwellings valued at $1,980,000, and nearly 950 permits for other buildings estimated to cost approximately $3,150,000. In December, authority was granted for the erection of some 500 dwellings and 900 other buildings estimated at approximately $3,300,000 and $7,000,000 respectively.

Manitoba, Saskatchewan, Alberta and British Columbia reported increases in the value of the building authorized as compared with December; British Columbia, with an advance of $850,354, or 85.7 per cent, showed the greatest absolute increase, but this was exceeded by the proportionate gain of $22,705, or 218.3 per cent, in Saskatchewan. Of the declines recorded in the remaining provinces, that of $6,144,252, or 87.0 per cent, in Quebec was most pronounced, representing reaction from the exceptionally high December total.

As compared with January, 1926, there were increases in all provinces except Nova Scotia, New Brunswick and Manitoba. The most marked advance was in Ontario—$403,977, or 20 per cent. Alberta, however, registered a larger proportional gain, of 89.8 per cent. The greatest loss was in New Brunswick, of $101,500, or 95.0 per cent.

In Toronto and Vancouver there were increases in the value of the building permits granted as compared with both the preceding month and the corresponding month last year. Montreal showed a decrease in the former and an increase in the latter comparison, while in Winnipeg the January total exceeded that for December, but was less than in January, 1926. The following cities reported increases in both comparisons—Sherbrooke, Galt, Guelph, Kingston, Port Arthur, St. Catharines, Welland, Riverside, Walkerville, Woodstock, Moose Jaw, Regina, Calgary, Lethbridge, Nanaimo, New Westminster and North Vancouver.

The value of the permits issued by 63 cities in January in the years 1920-27 is shown below:—

Year.	Value.
1927	$5,429,299
1926	4,719,534
1925	5,447,270
1924	4,460,579
1923	4,139,498
1922	3,326,537
1921	2,595,564
1920	4,017,024

The 1927 figure for January is thus shown to have been exceeded only once in the eight years' record, the total for January, 1925, being higher, but only by $17,971 or 0.3 per cent.

The accompanying table gives the value of the building permits issued by 63 cities in January, 1927, and December and January, 1926. The 35 cities for which statistics are available since 1910 are indicated by asterisks.

FAIR WAGE CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department has recently received information regarding certain contracts executed by the Government of Canada which included among their provisions the fair wages conditions sanctioned by Order in Council for the protection of the labour to be employed. The contracts (Group "A") awarded in connection with the works of construction contain the general fair wages clause, which is as follows:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade, in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

The contract for interior fittings (Group "B") awarded by the Department of Public Works, contain the general fair wages clause and other conditions for the protection of the labour employed in their execution, as sanctioned by the Fair Wages Order in Council as follows:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work

such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or a fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

A statement was also received as to supplies ordered by the Post Office Department subject to the regulations for the suppression of the sweating system and the securing of fair wages, etc.

The general labour conditions sanctioned by the Fair Wages Order in Council are as follows:—

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may, in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the Contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

2. The Contractor shall post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the Fair Wages Clause or Schedule inserted in his contract for the protection of the workmen employed, also any decision of the Minister of Labour under the preceding paragraph.

3. The Contractor shall keep proper books and records showing the names, trades, and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, and the books or documents containing such record shall be open for inspection by the Fair Wage Officers of the Government at any time it may be expedient to the Minister of Labour to have the same inspected.

4. The Contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of the contract in respect of work and labour performed in the execution of the contract unless and until he shall have filed with the Minister in support of his claim for payment a statement attested by statutory declaration, showing (1) the rates of wages and hours of labour of the various classes of workmen employed in the execution of the contract; (2) whether any wages in respect of the said work and labour remain in arrears; (3) that all the labour conditions of the contract have been duly complied with; nor, in the event of notice from the Minister of Labour of claims for wages, until the same are adjusted. The Contractor shall also from time to time furnish the Minister such further detailed information and evidence as the Minister may deem necessary in order to satisfy him that the conditions herein contained to secure the payment of fair wages have been complied with, and that the workmen so employed as aforesaid upon the portioun of the work in respect of which payment is demanded have been paid in full.

5. In the event of default being made in payment of any money owing in respect of wages of any workmen employed on the said work and if a claim therefor is filed in the office of the Minister and proof thereof satisfactory to the Minister is furnished, the said Minister may pay such claim out of the moneys at any time payable by His Majesty under said contract and the amounts so paid shall be deemed payments to the Contractor.

6. These conditions shall extend and apply to moneys payable for the use or hire of horses or teams, and the persons entitled to payments for the use or hire of horses or teams shall have the like rights in respect of moneys so owing them as if such moneys were payable to them in respect of wages.

7. With a view to the avoidance of any abuses which might arise from the sub-letting of contracts it shall be understood that sub-letting, other than such as may be customary in the trades concerned, is prohibited, unless the approval of the Minister is obtained; sub-contractors shall be bound in all cases to conform to the conditions of the main contract, and the main contractor shall be held responsible for strict adherence to all contract conditions on the part of sub-contractor; the contract shall not, nor shall any portion thereof be transferred without the written permission of the Minister; no portion of the work to be performed shall be done at the homes of the workmen.

8. All workmen employed upon the work comprehended in and to be executed pursuant to the said contract shall be residents of Canada, unless the Minister is of opinion that Canadian Labour is not available or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Department of Public Works

Contracts in Group "A" (Construction)—

Construction of a public building at Limoilou, P.Q. Name of contractor, Abel Ratté, Quebec, P.Q. Date of contract, January 28, 1927. Amount of contract, $36,960. The following prices to apply for any deduction or addition which may be made for excavation or concrete work: Price for excavation, $1.75 per cubic yard. Price for concrete, including form $12 per cubic yard.

Repairs to tug *Peel*. Name of contractors, The Collingwood Ship Building Company, Limited, of Collingwood, Ont. Date of contract, February 4, 1927. Amount of contract, $20,329.

Construction of a grain inspection office building, Winnipeg, Man. Names of contractors, Arthur Macaw and Robert J. Macdonald, firm "Macaw and Macdonald," Winnipeg, Man. Date of contract, February 9, 1927. Amount of contract, $17,160. The following prices to apply for any change which may be made: Price per cubic yard for excavation, $2. Price per cubic yard for concrete, including forms, $20.

Docking, repairing, etc., of the steel hopper scow *Cadeco No. 3*. Name of contractors, The Sydney Foundry and Machinery Works, Limited, Sydney, N.S. Date of contract, February 9, 1927. Amount of contract, $4,480.

Construction of a cottage and three leper huts at Bentinck Island, B.C. (Lazaretto). Name of contractor, Geo. Calder, Victoria, B.C. Date of contract, February 12, 1927. Amount of contract, $10,132.

Repairs to dredge No. 110. Name of contractors, Davie Shipbuilding and Repairing Company, Limited, Lauzon, Levis, P.Q. Date of contract, February 14, 1927. Amount of contract, $5,700.

Reconstruction of the outer block of West Point wharf, P.E.I. Name of contractors, Andrew Martin and Alfred Peters, Bloomfield, P.E.I. Date of contract, February 24, 1927 Amount of contract, approximate expenditure, $6,699. at the following prices: Creosoted piling at 95 cents per lineal foot. Creosoted timber, 12 by 12 inches, at $125 per M.F.B.M. Native timber 12 by 12 inches, at $85 per M.F.B.M. Native timber, 6 by 12 inches, at $65 per M.F.B.M.. Plank, 4-inch, $80 per M.F.B.M. Guard timber 8 by 8 inches, at $80 per M.F.B.M. Close piling, 30 cents per lineal foot. Drift and screw bolts, washers and spikes, 10 cents per pound. Mooring posts at $15 each.

Contracts in Group "B" (Interior Fittings)—

Supply and installation of electric wiring and fittings in the public buildings at Rimouski, P.Q. Name of contractor, S. Don. Carlos, Rimouski, P.Q. Date of contract, January 19, 1927. Amount of contract, $768.

Alterations and additions to the heating system, Fort Osborne Barracks, Winnipeg, Man. Name of contractors, W. G. Edge, Limited, Ottawa, Ont. Date of contract, February 3, 1927. Amount of contract, $29,500.

Supply and installation of customs fittings in the Winch building at Vancouver, B.C. Name of contractors, Interior Hardwood Company, Limited, Kitchener, Ont. Date of contract, February 5, 1927. Amount of contract, $8,153.

Supply and installation (in oak) of interior post office and customs fittings in the public building at Huntsville, Ont. Name of contractors, The Canadian Office and School Furniture Company, Limited, Preston, Ont. Date of contract, February 28, 1927. Amount of contract, $1,530.

Supply and installation of interior fittings in the post office at Napanee, Ont. Name of contractors, The Canadian Office and School Furniture Company, Limited, Preston, Ont. Date of contract, February 28, 1927. Amount of contract, $1,160.

Department of Railways and Canals

Contract in Group "A" (Construction)—

Transferring the 225.3 feet highway swing span, at present crossing the Welland canal at Main street, Welland, Ontario, to a new site about 330 feet upstream and placing it upon the new substructure prepared for it by the Department of Railways and Canals, and of putting the swing span at its new site in proper operating condition under electric power for the accommodation of navigation and of highway traffic. Name of contractors. Canadian Dredging Company, Limited, Welland, Ont. Date of contract, February 14, 1927. Amount of contract, $8,000.

Post Office Department

The following is a statement of payments made in February, 1927, for supplies ordered by the Post Office Department, under con-

tracts which are subject to the Fair Wages policy:—

Nature of Orders	Amount of Orders
Making metal dating stamps and type, also other hand stamps and brass crown seals	$ 842 61
Making and repairing rubber stamps, daters, etc	205 24
Making up and supplying letter carriers' uniforms, etc	34,376 14
Stamping pads, ink, etc	58 97
Bag fittings	1,565 00
Cotton duck for mail bags	5,443 72
Scales	630 90
Letter carriers' satchels	2,037 57

Fair Wage Clause in Pulp and Paper Contracts

An Order in Council, extending the areas in Northern Manitoba within which the Manitoba Paper Company may cut pulpwood for use in its pulp and paper mills at Pine Falls, contains a provision of exceptional interest for the protection of the labour which will be employed in this work. This provision, which was introduced at the instance of the Honourable Peter Heenan, Minister of Labour, is as follows:—

That the company shall pay to those employed in the industry wages rates not less than those which are generally accepted as current in each trade or occupation in similar industries, and shall maintain conditions of labour not less favourable than those prevailing in similar industries in the district.

The Dominion Government has observed during the past 27 years a policy known as "the Fair Wages Policy," under which contractors engaged in the execution of public contracts have been required to observe the wages rates and hours of labour which are current in the district for the various classes of labour employed. In the present instance, the Government has, however, extended its fair wages policy to apply to the cutting of pulpwood by a private company on the forest reserves of Northern Manitoba, and to its manufacture into pulp and paper.

This is the first time that this labour policy has been applied in the administration of the Crown lands of Canada.

PRICES, RETAIL AND WHOLESALE, IN CANADA, FEBRUARY, 1927

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was slight. Both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices were, however, somewhat lower.

In retail prices the cost per week of a list of twenty-nine staple foods, for an average family of five, in terms of the average retail prices in some sixty cities, was $11.23 at the beginning of February, as compared with $11.37 for January; $11.50 for February 1926; $10.93 for February, 1925; $10.75 for February, 1924; $10.53 for February, 1923; $10.61 for February, 1922; $14.08 for February, 1921; $15.77 for February, 1920; $16.92 for June, 1920 (the peak); $12.54 for February, 1918; and $7.75 for February, 1914. The price of eggs showed a substantial seasonal decline, while less important declines occurred in the prices of salt pork, bacon, lard, evaporated apples, potatoes and prunes. Slight increases occurred in the prices of butter, sirloin steak, cheese and flour. Including the cost of fuel and rent with that of foods the total budget averaged $21.46 at the beginning of February, as compared with $21.59 for January; $21.87 for February, 1926; $21.19 for February, 1925; $21.18 for February, 1924; $21.17 for February, 1923; $21.07 for February, 1922; $24.85 for February, 1921; $26.92 for June, 1920 (the peak); $24.71 for February, 1920; $19.80 for February, 1918; and $14.54 for February, 1914. Fuel was practically unchanged. No changes were reported in rent.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 236 commodities in 1913 as 100, and weighted according to the commercial importance of the commodities, was slightly lower at 150.1 for February, as compared with 150.6 for January; 162.2 for February, 1926; 164.7 for February, 1925; 156.8 for February, 1924; 153.6 for February, 1923; 153.5 for February, 1922; 191.1 for February, 1921; 256.7 for May 1920 (the peak); 238.8 for February, 1920; 200.5 for February, 1919; and 192.0 for February, 1918. Fifty-eight prices quotations were lower, thirty-five were higher and one hundred and forty-three were unchanged.

In the grouping according to chief component materials six of the eight main groups declined and two advanced. The higher levels for grains, flour, tea and fruits more than offset lower prices for potatoes, raw sugar, rubber, hay and straw, and caused an advance in the Vegetables and their Products group. The Non-Ferrous Metals group was also slightly higher. The groups which declined were: The

Animals and their Products group, due to lower prices of cattle, sheep, butter, lard and eggs, which more than offset the advances in the prices of hogs, ham and poultry; the Fibres, Textiles and Textile Products group, due to declines in the prices of cotton yarn, wool, sash cord, jute, hessian and binder twine,

cord from price quoted. d. Welsh coal. g. Natural gas used extensively. h. Lignite. i. Poplar, etc. j. In British Columbia as high as $40 per month. m. For new tenants $30-$35 and $20-$25. n. Houses with conveniences not extensively occupied by $30-$35. s. Delivered from mines.

Continued from page 313

which more than offset the increased prices for raw cotton and silk; the Wood, Wood Products and Paper group, due mainly to declines in the prices of groundwood, matches, and spruce sidings; the Iron and its Products group, due to lower prices for pig iron, steel billets and spring hinges; the Non-Metallic Minerals group, due chiefly to a decline in the price of coal; and the Chemicals and Allied Products group.

In the grouping according to purpose consumers' goods declined, chiefly because of lower prices for butter, eggs, lard, potatoes, coal and matches. Producers' goods advanced slightly. Lower prices for coal caused a de-

cline in producers' equipment. Materials for the textile and clothing industries, for the metal working industries, for the chemical using industries, for the meat packing industries, for the leather industry, as well as miscellaneous producers' materials, were somewhat lower, but these declines were more than offset by advances in the prices of materials for the milling and other industries and for the fur industry.

In the grouping according to origin raw or partly manufactured goods were lower, higher levels for grains, fruits, hogs, tea and cotton being more than offset by lower prices for potatoes, cattle, eggs, sugar, rubber, wool, jute, coal, pig iron, and steel billets. Fully or chiefly manufactured goods were also lower, advances in the prices of flour, ham and vegetable oils being more than offset by declines in the prices of butter, lard, hessian, copper, lead and zinc products, groundwood and matches. Articles of farm origin and articles of marine origin advanced, while articles of forest origin and articles of mineral origin declined.

Professor Michell's index number of forty articles, with prices during 1900-1909 as 100, was somewhat lower at 167.7 for February, as compared with 170.8 for January; 182.0 for February, 1926; 264.1 for February, 1920; and 117.9 for February, 1914. The figure for February, 1927, is the lowest recorded since November, 1922. The index of twenty foodstuffs declined from 187.7 for January to 182.6 for February. That for manufacturers' goods was also slightly lower at 152.7 for February, as compared with 163.4 for January.

EXPLANATORY NOTE AS TO WHOLESALE PRICES

The index number calculated by the Dominion Bureau of Statistics is based upon the prices of 236 commodities, price levels in 1913 being taken as the base, that is equal to 100, the figures being weighted according to the commercial and industrial importance of each article included. The index number has been calculated by years back to 1890, being unweighted, however, for the period 1890 to 1913 and has been calculated by months from 1919 to date for all groupings and from 1913 to date for the principal grouping. Summary tables of the Bureau's index number may be found in the supplement to the LABOUR GAZETTE for January, 1925, January, 1926, and in greater detail in the Report on "Prices and Price Indexes 1913-24," issued by the Bureau. A description of the methods used in the construction of the index number appears in the LABOUR GAZETTE for June, 1923.

The accompanying table gives the index numbers of the Dominion Bureau of Statistics by the principal groups in the three methods of classification and with those of the classification according to purpose or use in detail for the current month and for certain preceding dates.

EXPLANATORY NOTES AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of February of seventy-one staple foodstuffs, groceries, coal, wood and coal oil and the rent for six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality, for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city, except milk and bread, are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget of the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provision for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget of a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed in similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expendi-

ture on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises, or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated, when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditures of an ordinary family, according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adapted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

INDEX NUMBER OF CHANGES IN THE COST OF LIVING

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 has been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE for January on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures are now available also for March and September each year since 1917 and the accompanying table gives figures for December each year from 1914 to 1917, quarterly figures 1918 to 1926, and monthly figures for 1927. As stated in the above mentioned supplement the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light group, gas and electricity have been included.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1927*

(Average prices in 1913=100)

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½; Sundries 20%.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.8; 1916, 87.6; 1917, 87.2; 1918, 85.8; 1919, 85.8; 1920, 84.2; 1921, 84.9; 1922, 82.7; 1923, 79.5; 1924, 79.2; 1925, 75.6; 1926, 75.6.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1914-15 (Report, Vol. 2, page 318) and bringing the figures down to 1925. The figures are unweighted. The Dominion Bureau of Statistics has recently issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 71.5; 1925, 69.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1925, is weighted according to population in each city covered for the years 1923, 1924 and 1925, the figures are substantially the same as those recently issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1925 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.2; 1915, 98.0; 1916, 96.2; 1917, 100.8; 1918, 107.5; 1919, 111.4; 1920, 125.6; 1921, 144.4; 1922, 141.4; 1923, 136.2; 1924, 135.1; 1925, 132.0. Natural gas, 1913, 100; 1914, 102.3; 1915, 105.0; 1916, 105.0; 1917, 108.2; 1918, 104.8; 1919, 114.0; 1920, 126.2; 1921, 135.1; 1922, 158.9; 1923, 158.6; 1924, 156.8; 1925, 175.3. For the years 1900 to 1913 two index numbers of gas costs, calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 100.6; 1913, 100.0.

Retail Prices

Beef prices showed little change, although the tendency was towards somewhat higher levels. Sirloin steak averaged 28.9 cents per pound in February, as compared with 28.7 cents in January; round steak 23.5 cents per pound in February and 23.4 cents in January; rib roast 21.6 cents per pound in February and 21.4 cents in January; shoulder roast 15.8 cents per pound in February and 15.9 cents in January. Veal declined slightly, averaging 20 cents per pound. Mutton fell from 28.5 cents per pound to 28 cents, lower prices being reported from many localities. Salt pork was down in the average from 27.4 cents per pound in January to 26 cents in February, somewhat lower prices being reported from nearly all localities. Bacon was also slightly lower, averaging 40.7 cents per pound. Boiled ham declined from 63.1 cents per pound in January to 61.9 cents in February. In fresh fish, whitefish declined from 21.4 cents per pound in January to 20.4 cents in February. Halibut and cod steak showed little change. The price of lard fell from 23.2 cents per pound in January to 22.8 cents in February. Prices in the Maritime Provinces were somewhat higher, but declines occurred in most other localities.

Eggs showed a substantial seasonal decline, fresh averaging 58.4 cents per dozen in February, as compared with 66.5 cents in January, and cooking averaging 50.1 cents per dozen in February, as compared with 52.7 cents in January. Lower levels were reported from all localities. No changes were reported in the prices of milk. Both dairy and creamery butter advanced, the former averaging 43.6 cents per pound in February and 43 cents in January, and the latter averaging 49 cents per pound in February and 47.9 cents in January. Cheese was slightly higher at an average of 30.7 cents per pound.

No changes occurred in the prices of bread, the average being 7.6 cents per pound. Flour showed a slight increase at 5.3 cents per pound. Rice and tapioca were steady. Canned vegetables were practically unchanged. Onions advanced from 4.9 cents per pound in January to 5.1 cents in February. Potatoes showed little change, averaging $2.01 per ninety pounds, as compared with $2.03 in January. Evaporated apples were down from an average of 20.2 cents per pound in January to 19.8 cents in February. Currants were slightly higher at an average price of 18.4 cents per pound. Marmalade was down from 68.5 cents per 4 pounds in January to 67 cents in February. Granulated sugar was unchanged in the average, slightly higher prices in some localities being offset by declines in others. Coffee and tea showed little change. Coal was steady, anthracite averaging $16.86 per ton and bituminous $10.34. Hardwood averaged $12.18 per cord in February, as compared with $12.14 in January. No changes were reported in rent.

Wholesale Prices

The following is a summary of wholesale price changes during the month issued by the Dominion Bureau of Statistics.

Grain prices moved to higher levels during February. The average for No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, was $1.397, as compared with $1.363 for January. The low price for the month was $1.38⅝, reached on the 14th, and the high $1.41⅛ on the 28th. Coarse grains moved in sympathy with wheat, western barley being up from 67¾ cents per bushel to 69½ cents; western oats from 58¾ cents per bushel to 69½ cents; flax seed from $1.87½ per bushel

to $1.90½; and Ontario rye from 95¼ cents per bushel to 97 cents. Flour also followed the trend in wheat, advancing at Toronto from $7.95¾ per barrel to $8.10. Rolled oats were down from $3.45 per sack to $3.25. Tea was slightly higher at Toronto. Potatoes at Montreal declined from $1.45 per bag to $1.27½, and at Toronto from $1.57½ to $1.52½. Manitoba potatoes at Winnipeg were down from 75 cents per bushel to 66½ cents, and New Brunswick varieties at St. John from $3.25-$3.50 per barrel to $3.00-$3.25. Raw rubber continued to decline, being down from 37½ cents per pound in January to 37⅛ cents in February. Cotton seed oil rose from 12 cents per pound to 13 cents, and raw linseed oil from 93 cents per gallon to 95 cents. Western cattle at Winnipeg declined from $6.68¾ per hundred pounds to $6.59, and choice steers at Toronto from $7.21 per hundred pounds to $7.18¾. Choice sheep were down from $6.62½ per hundred pounds to $6.50. Hogs at Toronto rose from $11.62 per hundred pounds to $11.78. Ham advanced from 27-28 cents per pound to 29-29½ cents. Finest creamery butter at Montreal declined from 43 cents per pound to 42 cents. At Toronto creamery prints were down from 47 cents per pound to 46 cents and solids from 45 cents per pound to 44 cents. Cheese was slightly lower at Montreal at 25 cents per pound. The downward movement in eggs continued, fresh declining from 60-63 cents per dozen to 52-54 cents, and storage from 47 cents per dozen to 43 cents. Lard at Toronto declined from 16½ cents per pound to 15 cents. Raw cotton at New York rose from 13½ cents per pound to 14⅛ cents. Raw silk at New York was slightly higher, the price advancing from $5.60 per pound to $5.80. Prices of wool continued to decline, being down from 1 to 3 cents per pound. Jute declined from $9.05 per cwt. to $8.50 and hessian from $11.25 per hundred yards to $10.50. Binder twine was down from 14⅛ cents per pound to 13⅛ cents. Pig-iron at Montreal declined from $28.20 per ton to $27, and steel billets from $39-$45 per ton to $37-$43. Groundwood pulp was slightly lower at $28-$30 per ton. Tin advanced from 67½ cents per pound to 69¼ cents, and silver from 55⅛ cents per ounce to 56⅝ cents. Copper sheets fell from 20¾ cents per pound to 20½ cents, and copper wire from 18¼ cents per pound to 18 cents. Anthracite coal was down from $13.57 per ton to $13.32.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The various index numbers showed prices to be generally falling during the early part of the year.

Great Britain

WHOLESALE PRICES

The Board of Trade index number, on the base 1913=100, was 143.6 in January, as compared with 146.1 in December and 152.4 in November. During January foods declined nearly 1.0 per cent to 153.5 and non-foods declined 2.1 per cent to 138.2. The group "other metals and minerals" declined from 185.1 in November to 138.1 in January. For the past year, the method of the Board of Trade has been to publish the index number with 1924=100 as the base, and the calculation has been carried back to January, 1925. At the same time, the old base, 1913=100, has been continued and the index calculated on that base published in a separate table.

The *Times* index number on the base 1913=100 was 140.5 for January, being thus 1.1 per cent lower than a month earlier and the lowest figure in the post war period. Food prices declined 0.4 per cent and industrial materials declined 1.5 per cent. Four of the eight commodity groups were higher, three lower, and one unchanged. "Other metals and minerals" declined 7.3 per cent owing to a further fall in coal prices, and lower prices for other non-ferrous metals. Iron and steel declined. Cotton was unchanged but, owing to higher prices for wool and flax, "other textiles" rose 2.8 per cent. There was a fall of 2.8 per cent in the meat and fish group owing to a seasonal decline in eggs.

The *Statist* index number (in continuation of Sauerbeck's figures), base period, 1867-77=100, was 123.1 at the end of January, showing a decline of 0.6 per cent as compared with December, 1926. The decline was caused mostly by lower prices for certain vegetable foods, and for sugar, coffee and tea. In minerals there was a drop in coal, and copper, tin and lead were lower. Raw cotton, flax, wool and silk were higher. In sundries, vegetable oils, seeds and timber were stronger; hides and leather weaker.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry and Labour, on the base April, 1914=100, was 860 in December, a slight decline from the level of the previous month.

COST OF LIVING.—The official index number of the cost of living of a working man's family of the lowest category, on the base 1921=100, was 203.91 in January, being slightly higher than the December level. A considerable increase took place in the rents index, and in sundries, while food and clothing also advanced and fuel and light declined slightly.

France

WHOLESALE PRICES.—The index number of *Statistique Générale*, on the base July, 1914=100, was 635 for January, a decline of nearly one per cent from the December level. Both native and imported articles declined somewhat. Foods rose slightly and materials declined.

Denmark

WHOLESALE PRICES.—The official index number on the base 1913=100 was 158 in December, and thus 6.5 per cent lower than the level for November, which was 170. Prices had continued to fall during the first four months of the year, raw materials and semi-manufactures falling faster than consumers' goods, and from January, 1925, to April, 1926, consumers' goods had declined 30 per cent and raw materials 42. Toward the end of the year, the prices of raw materials, owing to the British coal strike, started to rise and from April to October they rose from 129 to 185, while consumers' goods remained almost unchanged. During December fuel and lubricating oil declined from 226 to 145. Consequently, imports declined from 187 to 154. Raw materials and semi-manufactures at the same time declined from 166 to 137.

Germany

WHOLESALE PRICES.—The accompanying table shows the groups used in the new index number of wholesale prices, with figures for January, June and December, 1926, and for January, 1927. The base is unchanged at 1913=100. The calculation has been carried back to January, 1924, with monthly figures. Since November 16, 1924, weekly figures have been published from which the monthly average is calculated. As will be seen from the tables there was a slight decline in the January level, chiefly due to a decline in the group agricultural products, due to a seasonal decline in cattle prices and in animal foods. Vegetable foods and fodder rose slightly. The index number of provisions and of raw materials and semi-manufactured goods was slightly higher in January. Manufactured goods showed a slight decline, with declines both in producers' goods and consumers' goods.

COST OF LIVING.—The official index number rose in January 0.2 per cent. Foods rose slightly; clothing declined slightly; sundries declined owing to a fall in the price of soap; heat and light rose slightly; and rent showed no change.

GERMANY—WHOLESALE PRICES INDEX NUMBER

New Series, 1913=100

Groups of Commodities	Jan., 1926	June, 1926	Dec., 1926	Jan., 1927
I—Agricultural Products:				
Foodstuffs of vegetable origin	111·2	127·3	152·1	154·2
Cattle	120·1	120·6	119·6	116·6
Foodstuffs of animal origin	150·0	131·4	162·4	148·6
Fodder	104·1	109·1	141·4	142·3
All	**122·3**	**124·0**	**143·7**	**140·3**
II—Provisions	**132·7**	**136·4**	**128·4**	**129·3**
III—Industrial materials and semi-manufactured goods:				
Coal	132·1	130·6	134·7	135·1
Iron	123·5	122·8	127·0	124·6
Metals	121·8	114·1	113·7	110·7
Textiles	166·7	150·2	136·3	138·5
Skins and leather	112·8	110·7	122·0	123·3
Chemicals	126·7	121·3	124·1	125·1
Artificial fertilisers	90·9	80·9	83·2	86·0
Technical oils and fats	128·6	132·8	132·2	132·2
Rubber	102·8	53·9	48·0	49·2
Paper-making materials and paper	159·2	149·6	148·8	148·6
Building materials	147·7	141·7	147·9	149·7
All	**134·4**	**127·6**	**128·4**	**128·8**
IV—Manufactured Goods:				
Producers' goods	136·8	132·4	129·7	129·3
Consumers' goods	174·0	163·1	151·7	150·9
All	**158·0**	**149·9**	**142·3**	**141·6**
V—General Index (All Goods)	**135·8**	**131·9**	**137·1**	**135·9**

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office was 1397 in December, on the base average annual aggregate expenditure, four chief centres, 1909-13=1000, and showed an advance of 5 per cent for the month. There were advances in foodstuffs of vegetable origin, and animal products; declines in wood and wood products and non-metallic minerals and their products; and no change in textiles and metals and their products.

36732—6½

COST OF LIVING.—The official index number for November, 1926, on the base July, 1914=1000 (foods based on prices in 25 centres and other elements on prices in 4 centres), was 1622, a slight decline from the August level. Foods declined slightly and only very slight changes were shown by other groups.

China

WHOLESALE PRICES.—The index number of the Shanghai Bureau of Markets, of wholesale prices at Shanghai, calculated on the base February, 1913=100, was 172.0 in December, showing a decline of nearly 1.0 per cent. There were declines in the groups cereals, other foods, textiles and metals, while the average of the four miscellaneous groups rose 2 per cent, with increases in fuels, building materials and sundries, and a decline in industrial materials.

United States

WHOLESALE PRICES.—Bradstreet's index number (showing the cost of 106 commodities) was $12.5543 on March 1, showing a very slight upward trend for the month, although the number of commodities and of groups showing declines slightly exceeded those advancing. Five groups—oils, metals, live stock, miscellaneous products and fruits, advanced; while seven, including provisions, breadstuffs, hides, textiles, naval stores, building materials and coal declined; and chemicals and drugs were unchanged.

The index number of the Bureau of Labour Statistics showed a slight decline in January, registering 146.9 compared with 147.2 for December, a decline of 0.2 per cent. There were decreases in price levels of all groups except farm products and miscellaneous commodities. Farm products showed an increase of 1.75 per cent, owing to slight increases in cattle, hogs, sheep, poultry, cotton, hides and potatoes. There was practically no change shown in the level of the miscellaneous group.

COST OF LIVING.—The index number of the National Industrial Conference Board declined one point in January to 167 on the base July, 1914=100. Foods fell 3 points, and shelter and fuel and light also showed declines. Sundries rose one point and clothing showed no change.

The index number of the Special Commission on the Necessaries of Life, showing the level of the Cost of Living in Massachusetts, was 161.2 in January on the base 1913=100, slightly lower than the previous month. Food and clothing both showed considerable decline, while other elements of the budget showed little or no change.

Cost of Living in Italy

The Italian Government, having considered the proposals submitted by the Superior National Economic Council for bringing about a reduction in the cost of living, has decided to take the following measures:

(1) All persons engaged or intending to engage in trading are to be required to obtain a special licence from the municipal authority, and to deposit a security of between 500 and 5,000 lire according to the volume of trade done;

(2) The issue of the licence is to be dependent on the advice of a committee composed of the *podestat* (the chief municipal official, appointed by the Government), two representatives of the traders' associations, and two representatives of the workers' associations. The licence may be withheld if the applicant does not furnish adequate guarantees as to character and financial standing, or if the committee is of opinion that the number of shops engaged in the branch of trade in question is in excess of public requirements;

(3) The municipal authorities are to be empowered, at their discretion and by agreement with the provincial economic councils and the associations concerned, to fix the retail prices of the principal foodstuffs. Traders dealing in foodstuffs are to be required to post in their shop windows both the wholesale and the retail prices, even when the retail prices have been fixed by the municipal authority;

(4) In the event of refusal to grant a licence, the trader concerned may appeal to the provincial administration control committee. A licence may be revoked on various grounds; for example, if the trader conceals or destroys goods, or sells at prices higher than those fixed by the municipal authority or at prices which are excessive in the opinion of the committee, or if he is found guilty three times in succession of an offence against the provisions in force against fraudulent trading, selling under weight, adulteration of food, etc.

FATAL INDUSTRIAL ACCIDENTS IN CANADA IN 1926

THE accompanying tables provide an analysis of the fatal accidents to workpeople in Canada in the course of their employment during the calendar year 1926, according to causes, provinces, and months, as well as by industries. The tables include such fatalities from industrial diseases as are listed with fatal accidents by workmen's compensation boards, etc. Quarterly statements giving a list of the accidents occurring during the period covered, and certain particulars as to each, appeared in the LABOUR GAZETTE for May, August and November, 1926, and February, 1927. A supplementary list of accidents occurring in 1926, which have been included in the accompanying statistical tables is to be found at the end of this article.

The record is compiled from reports from the following governmental authorities:—

Dominion: The Board of Railway Commissioners and the Explosives Division of the Department of Mines, Ottawa.

Nova Scotia: the Workmen's Compensation Board, and the Department of Public Works and Mines.

New Brunswick: the Workmen's Compensation Board.

Quebec: the Department of Public Works and Labour, and the Bureau of Mines.

Ontario: the Factory Inspector, the Workmen's Compensation Board, the Ontario Railway and Municipal Board.

Manitoba: the Bureau of Labour and the Workmen's Compensation Board.

Saskatchewan: the Bureau of Labour.

Alberta: the Workmen's Compensation Board.

British Columbia: the Department of Mines and the Workmen's Compensation Board.

Reports were also received from the Algoma Central and Hudson Bay Railway, the Algoma Steel Corporation Limited, and the Lake Superior Paper Company, as well as from correspondents of the LABOUR GAZETTE resident in the principal industrial centres throughout Canada. Industrial accidents reported in the press are also included in the record, after inquiry has been made to avoid duplication, etc. Most of the accidents in agriculture are recorded from press clippings, and, while it is not known to what extent the accidents in this industry are covered, it is believed that in this respect the record is fairly complete. On the whole, however, most of the information obtained from this source is used merely to supplement information received from official sources.

The total number of fatalities recorded for the year was 1303, the fatalities being attributed to the various industries in the following proportions: transportation and public utilities, 351 or 26.9 per cent of the total; manufacturing, 184 or 14.1 per cent; construction, 159 or 12.2 per cent; mining, non-ferrous smelting and quarrying, 154 or 11.8 per cent; agriculture, 151 or 11.6 per cent; logging, 134 or 10.3 per cent; fishing and trapping, 71 or 5.4 per cent; service, 68 or 5.2 per cent; trade, 26 or 2.0 per cent; finance, 2; unclassified, 11.

The tables also include summary figures for 1925, being a final revision of the figures published in the LABOUR GAZETTE for March, 1926, by the inclusion of accidents occurring in 1925, reported too late for incorporation into the annual statement. These accidents were shown in detail in supplementary lists in the LABOUR GAZETTE for May, August and November, 1926. The figures for 1926, being to some extent still incomplete, are accordingly not strictly comparable with the completed figures for 1925. In some industries where differences in the numbers of accidents are accentuated these can be attributed to particular circumstances. For example, in the fishing and trapping group the increase in the number of fatalities from 13 to 71 reflects the occurrence of two disasters, involving respectively 21 and 26 fishermen, due to heavy storms in August. In coal mining there was an increase from 61 to 84 fatalities partly accounted for by an explosion at Coleman, Alberta, causing the death of 10 men. In water transportation, with an increase in fatalities of from 75 to 86 there was an accident involving the loss of seven lives, owing to the capsize of a steamer in the St. Lawrence river, from the shifting of badly loaded cargo. One of the victims of the same accident is included under "Service: Public Administration." In water transportation is also included an accident involving the loss of six lives owing to the ramming of a tug boat by a grain boat in the St. Lawrence river.

The classification of fatal accidents according to causes shows that the largest number, 446, came under the category "by moving trains, vehicles, etc." This includes all accidents due to cars or engines, including mine and quarry cars, and to automobiles and other power vehicles and horse-drawn vehicles, as well as accidents caused by moving implements both those impelled by power and those drawn by horses, by moving water craft and

Continued on page 330

by air craft. The largest number of accidents thus caused were due to victims "being struck or run over by or crushed by or between cars and engines." Of these there were 160, 102 of the victims having been engaged in the industry "Steam Railways". There were as well 36 fatalities (28 in the industry "Steam Railways") due to derailments, collisions, etc., and 25 (22 in the industry "Steam Railways") due to falls from or in cars or engines, while mine and quarry cars caused 19. Automobiles and other power vehicles and implements caused 48 fatalities, while animal drawn vehicles and implements caused 40, accidents primarily caused by animals being classified elsewhere. Water craft caused 117 fatalities, of which 64 came under Fishing and Trapping and 32 under Water Transportation. Next in order as a cause of fatalities was "falling objects," which caused 180. Of these 72 came under "falling trees", including 59 in the logging industry. Fifty-nine came under the head "objects falling in mines and quarries," including 55 in the Mining, non-ferrous smelting and quarrying group. Thirty-seven came under "objects falling from elevations, loads, piles, etc.", 13 under "collapse of structure"; 7 under "breaking of straps and pulleys" and one under "other causes". Fatalities numbering 176 were caused by falls of persons, and included 62 falls from elevations, 42 falls into pits, shafts, harbours, rivers, etc. (some of which resulted in drowning), 21 falls owing to collapse of support, 12 falls from loads, etc., 11 falls from ladders, 7 falls into holds of vessels (these therefore not being included under "water craft") 7 falls into tanks, vats, kilns etc. (often resulting in death from suffocation), 6 falls on the level, 4 falls on sharp objects and 4 falls down stairs and inclines. "Dangerous substances" caused 166 fatalities, of which 58 were caused by "explosive substances," 30 of these occurring in mines and quarries; 46 were caused by electric current; 26 by conflagrations; 14 by inflammable substances and flames; 11 by steam escapes, boiler explosions, compressed air; and 11 by gas fumes. There were 41 fatalities due to hoisting apparatus, including

17 due to elevators and 24 to conveyers and other hoisting apparatus. Prime movers caused 12 fatalities and working machines, 53. There were 46 fatalities caused by victims striking against or being struck by objects, and 16 due to handling of objects, while "use of tools" caused 4 deaths. There were 32 deaths caused by animals, including 22 by horses, and 10 by other animals. The last number included 4 accidents due to bulls, 3 due to cows, one due to a bear, one to a mad boar, and one due to being stung by bees. The category "other causes" included 122 fatalities in all, with 28 deaths following infection, 18 due to industrial diseases and such consequences of industry as strain, etc., 18 due to drowning with no other particulars given; 29 due to cave-ins, land slides and ice jams; 9 due to shooting and violence; 11 due to lightning, frost, storms and sunstroke; and 9 of which no particulars were given.

The classification of fatal industrial accidents under provinces shows that the largest number occurred in Ontario, which had 463. There were 259 in Quebec, 209 in British Columbia, 119 in Nova Scotia, 95 in Alberta, 55 in Saskatchewan, 54 in Manitoba, 38 in New Brunswick and 9 in Prince Edward Island. In Ontario, the largest proportion of fatalities occurred in the group Transportation and Public Utilities, where there were 123, with 91 in manufacturing, 77 in construction, 57 in agriculture, 37 in mining, non-ferrous smelting and quarrying, 32 in logging and 28 in service. In Nova Scotia and Alberta there were respectively 27 and 40 mining fatalities. These formed the largest proportion of the fatalities in Alberta, but in Nova Scotia they were second to the fishing fatalities, which numbered 55. In British Columbia there were 62 fatalities in logging, with 47 in transportation and public utilities, 29 in the mining group and 27 in manufacturing, of which 18 were in saw and planing mills. In Saskatchewan the greater proportion of fatalities, 31, was in agriculture, with 11 in transportation and public utilities. There

*These fatalities include accidents to fishermen and seamen outside Canadian waters. The fatalities are assigned to the provinces in which the various ships were registered. For particulars of accidents see quarterly statements in the Labour Gazette for May, August and November, 1926, and February, 1927.

**1925, revised figures. †Prospector's employee.

*In this column the figures for manufacturing are for 1924, and for other industries, for 1925, Annual Census of Industry.
†Revised figures for 1925.
**This number is for fishing only.

Continued from page 331

were two accidents outside of the provinces, one of which was in mining and took place in the Yukon Territory while the other was in the Northwest Territories.

The table of fatalities by months shows the highest point to have been in August, when there were 193, the average per month being 108.6. The low point for the year, 66, was reached in February and April. The largest number of accidents in construction occurred in August, and in the other industries for which this month is a period of exceptional seasonal activity, namely, fishing, agriculture and transportation, this was to a great extent reflected in the record. This table gives estimates of the numbers of employees in certain industries, the latest figures available being given in each case. The frequency of fatalities for the industries for which this estimate was available was thus highest for logging, being 4.7 per thousand for the year, and second for mining, non-ferrous smelting and quarrying, being 2.4 per thousand. Fishing and trapping accidents showed a frequency ratio of 1.2 per thousand, and manufacturing one of 0.3 per thousand. The ratio of accidents to steam railway employees was 1.1 per thousand, to street and electric railway employees 0.6 per thousand and to employees of telegraph and telephone companies, 0.3 per thousand.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS IN 1926
(Included in the foregoing statistical tables)

Trade or Industry	Locality	Date	Age	Cause of Fatality
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Coal mining—				
Miner	Saunders, Alta.	Nov. 18	31	Fall of rock from pot-hole in roof. Died Jan. 9.
MANUFACTURING—				
Saw and planing mills:				
Labourer	Rocky Inlet, Ont.	Dec. 1	23	Foot crushed; infection.
CONSTRUCTION—				
Buildings and structures:				
Plumber's labourer	Paris, Ont.	Aug. 30	.....	Fractured skull.
Miscellaneous:				
Labourer	Whitecourt, Alta.	Dec. 31	42	Struck by breaking top of tree.
TRANSPORTATION—				
Steam railway:				
Roadmaster	Edson, Alta.	Dec. 30	43	While examining hoist in ice house, missed footing and fell to bottom of ice house.
Electric railway—				
Boatman	Stave Falls, B.C.	Nov. 23	.....	Towing driftwood near dam; fell from boom-stick, drowned.
SERVICE—				
Public administration:				
Patrolman	Merritton, Ont.	Dec. 16	69	Fell on head.

The Chief Justice of the province, in a case heard at the City of Quebec on December 3, ordered the payment of compensation amounting to $3,000 to a workman who had sustained a rupture which was estimated to have reduced his earning capacity by 60 per cent.

The Vancouver Trades and Labour Council recently gave the sum of $1,160 to Local 118, International Alliance of Theatrical Stage Employees to defray part of the cost incurred by the local union in connection with the recent action brought against it by the proprietor of the Empress theatre, Vancouver, for damages caused by the picketing of his theatre. The trial is said to have cost the union about $4,000, a large part of this sum having been met by the thirty-three members. The Trades and Labour Council agreed that instead of taking the case to a higher court efforts should be made to have the Criminal Code amended in the section referring to "watching and besetting." (The text of the judgment given in this case by Chief Justice Macdonald in the British Columbia Court of Appeal appears on another page of this issue.)

IMMIGRATION INTO CANADA DURING THE FISCAL YEAR 1925-26

THE Department of Immigration and Colonization has recently published its ninth annual report, covering the activities of the fiscal year ended March 31, 1926. The wide range of the Department's work is shown by the reports of the various branches, including those concerned with Chinese immigration; colonization schemes; publicity; immigration of women; juvenile immigration, and the work of the commissions of the eastern, western and Pacific divisions of Canada.

The main statistics in the report relate to the number, nationality, sex, occupation and destination during the period under review, as well as for previous years. The total number of immigrants into Canada during the fiscal year 1925-6 was 96,064, as compared with 111,362 for the previous year, and with 148,560 for the fiscal year ending March 31, 1924. Of the total of 96,064 for 1925-6, 46,963 were males, 26,611 were females, and 22,490 were children. The number of immigrants arriving by ocean ports was 77,268 in 1925-6, and 95,544 in 1924-5. From the United States 18,778 persons immigrated into Canada, as compared with 15,818 in the earlier period.

By nationality, the principal groups of immigrants were as follows: English, 19,689; Scotch, 10,295; German, 7,356; Irish, 5,993; Magyar, 4,112; Ruthenian, 4,259; Jewish, 3,587; Scandinavian, 3,572; Polish, 2,535; Slovak, 2,046; Italian, 1,638; Finnish, 1,617; Jugo-Slav, 1,604.

European Emigration.—The report states that much attention was directed during the year 1925-26 to the settlement of British families on farms in Canada under the Empire Settlement Agreement, which had for its object the settlement of 3,000 British families on farms in Canada. A new Empire Settlement Passage scheme was brought into effect on January 1, 1926. The Canadian Government supplies the land under purchase arrangements with migrants, and the British Government makes advances for farm stock and equipment. The first settlers under the scheme migrated during the period 1925-6.

The Employment Service of Canada, it is stated, has always co-operated very fully with this branch, and furnished statistics and reports as requested. Quarterly statements listing openings for houseworkers in Canada as shown by employers' orders in the 68 offices in Canada, are sent in to the department regularly, and forwarded to a London office for their information. Reports of placements of houseworkers, clerical, industrial, and factory workers are sent in regularly to the department in order to show whether girls coming out to take domestic employment remain at that work. The Employment Service in Regina places all girls who go to that province. In addition they collect loans for the department and make investigations when necessary.

The report states that the operation of the new Empire Settlement Passage Agreement has had a very important effect both upon the quality of emigrants and upon the volume of immigration. The new scheme, while requiring that the proportion payable by the family should be paid when possible, made provision for the loan of that proportion when such loan was considered desirable or necessary. In the great majority of cases the migrant's proportion has been paid by the migrant, and this has been possible because of the fact that under the agreement children under seventeen years of age travel free. The application of the reduced passage rate to farm labourers proper and to domestic household workers has not been, so far, so distinctly successful as with families either under the 3,000 Families Scheme or under the Placement Scheme.

In regard to "after care agreements," the chief share of the work done under this agency for ensuring the welfare of immigrants was done by the province of Ontario, the two Canadian railway companies, and the Scottish Immigrant Aid Society. Other organizations having after-care agreements are the provinces of Nova Scotia and New Brunswick, the Salvation Army, the British Settlement Society of Canada, the Council for Social Service of the Church of England, and the Eastern Townships Immigration Society.

Juvenile Immigration.—In 1923 the Dominion Government undertook to grant assisted passages to children brought out by the various agencies for juvenile migration from the British Islands to Canada. Previously, these agencies have done their work voluntarily, a total of 83,000 boys and girls having been brought to Canada during the years of their activities. During 1923 a passage grant was made to apply to children from 14 to 17 years of age. Operations under the plan began in 1923-24, and in 1925-26 1,962 children were "migrated." Of this total 464 were brought out by the Salvation Army, 446 by the British Immigration Aid and Colonization Association, and the remainder by the other agencies.

The Women's Branch of the Department was formed in 1919 to care for women and

children coming to Canada. Previous to sailing they are interviewed and given accurate information regarding conditions in Canada; they receive watchful care at the ports on arrival and on the train; they are helped and advised at final destination and general supervision is given until they become established in Canada. The headquarters of the branch is in Ottawa, where there is a supervisor and staff. Canadian women officers are employed also at the principal agencies in Great Britain. Women officers and conductresses for the trains are at the ports of arrival in Canada; also women officers are stationed at Montreal and Toronto. The steamship conductresses form the link between Great Britain and Canada and give the necessary care on board ship. At ports of arrival the Red Cross Society, Travellers' Aid, and the representatives of the religious denominations such as the Y.M.C.A., and the Catholic Women's League, the Church of England, United Church, Imperial Order of Daughters of the Empire, Jewish Aid, etc., are actively engaged in helping the newcomers. The next important link in the aftercare is the Canadian Women's Hostels in each province, to which houseworkers seeking employment are destined. The majority of the girls are then placed in situations by the Employment Service. Representatives of the various churches are in close touch with the Hostel Superintendents, and follow up and visit the girls of their own denomination. Next to be mentioned are the Social Service organizations in this country who assist the newcomer who is in difficulty. The Social Service Department of some of the larger hospitals are in close touch with the Women's Branch.

Returning Canadians.—An important movement not included in the immigration figures is the movement of returning Canadians. In April, 1924, it was decided to record those Canadian citizens returning to Canada after an absence in the United States, who had left Canada with the intention of making their permanent home out of Canada and returned to the Dominion declaring their intention of again taking up permanent residence here. Persons who left Canada on visits or for other temporary purpose are not included in this summary. Returning Canadian citizens are divided into three classes: (*a*) those born in Canada; (*b*) British born who had acquired Canadian domicile; and (*c*) persons who secured naturalization in Canada.

The movement in the years 1924-5 and 1925-6 is shown as follows:—

—	Year ending March 31	
	1925	1926
Canadian born citizens	36,473	40,246
British subjects who had acquired Canadian domicile	4,487	4,102
Naturalized Canadian citizens	2,815	2,873
Totals	43,775	47,221

Chinese Immigration.—The head tax of $50 imposed upon Chinese in 1885, and increased to $100 in 1901 and to $500 in 1904, was abolished under the Chinese Immigration Act of 1923, which confines the entry of Chinese to a few classes, namely, members of diplomatic corps, etc., children born in Canada of Chinese parents; merchants as defined by regulations, and students. In consequence of this legislation no general Chinese immigration took place in 1924-5 or in 1925-6.

Immigration to Canada during the Nine Months ended December 31, 1926

The accompanying tables from the Department of Immigration and Colonization show the nature and extent of immigration into Canada during the first nine months of the fiscal year 1926-7. Of a total of 114,035 immigrants 42,793 were British, 17,154 from the United States and 54,088 from other countries. In the same period and not included in the general immigration figures, 48,601 Canadians returned from the United States so that if this number is added to that of general immigration the combined total is 162,636.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Picketing Constituting a Boycott is Unlawful

THE text is given below of the judgment rendered in the British Columbia Court of Appeal on January 4 by Chief Justice Macdonald, together with the dissenting opinion of Mr. Justice M. A. Macdonald, in the case *Schuberg versus Local 118, International Alliance of Theatrical Stage Employees et al.* A note on this case was given in the LABOUR GAZETTE, January, 1927, page 3, and the judgment of Mr. Justice Gregory, in the Supreme Court of British Columbia, from which the appeal was made, was outlined in the issue for June, 1926, page 624. The facts of the case were as follows:—

The appeal was taken by the defendant union and certain officials in a representative capacity from the decision of Gregory J. of May 10, 1926, in an action for damages and an injunction. The plaintiff carried on business as the Empress Theatre, Vancouver, and employed a crew of seven stage hands; but on December 28, 1925, the plaintiff gave notice to the foreman of his stage crew to the effect that on and after January 11, 1926, only five of said crew would be employed. On the 18th of January, 1926, and continuing thereafter up and until the 24th day of February, 1926, the defendant trade union published and distributed hand bills, having printed thereon:—

"It is illegal to boycott, but this is to inform the theatre going public of Greater Vancouver that the Empress Theatre is unfair to organized labour. Conditions enjoyed by the Stage Employees for the last eighteen years are now denied them by the present management".

The defendant union caused motor cars and sandwich men to parade before the plaintiff's place of business, carrying and displaying signs or banners having printing thereon similar to that on said hand bills. It was claimed by the plaintiff that the defendant trade union did wrongfully and maliciously "watch and beset" his place of business, and that the actions of the defendants were wrongful and malicious, causing injury to his business. The defendants admitted the acts done, but pleaded that there was a trade dispute and that the acts done and complained of were

for the sole purpose of furthering the interest of the defendants in connection with said trade dispute and they also pleaded the Provincial Act relating to Trade Unions, Revised Statutes of British Columbia, 1924, chapter 258.

On March 4, 1926, The Honourable Mr. Justice W. A. MacDonald granted an interim injunction against the defendants.

Mr. Justice Gregory held that the acts of the defendants were done with the intention of injuring the plaintiff's business, and as the union had admitted their responsibility the Trade Union Act, R.S.B.C., 1924, chapter 258, afforded them no protection. The plaintiff, he stated, had a perfect right to carry on his business in the way he wished, and the defendants combined in an endeavour to prevent him from so doing using unlawful means.

The Chief Justice and Mr. Justice McPhillips affirmed the judgment of Mr. Justice Gregory. Mr. Justice Martin and Mr. Justice M. A. Macdonald dissented.

Judgment of Chief Justice Macdonald

The facts relied upon to sustain the judgment are in the main not in dispute, and those not admitted were amply proved.

The plaintiff was the owner and manager of a theatre; he desired to cut down his staff by discharging two out of seven; these men were members of the defendant Union; the plaintiff was waited upon by a committee of the Union, and was denied the right to dismiss the men. In other words, they told him that if he persisited in his action of dispensing with the services of the two men, the Union would withdraw all seven. This they did, and when the plaintiff had replaced the men withdrawn by five others who were not members of the Union, the defendants admittedly in collusion together pursued a course of conduct towards the plaintiff which resulted in great loss of business to him. The seven men who had formerly been his employees in combination with the other defendants, beset the theatre from the 18th of January until the 24th of February, when an injunction prevented them from continuing. Men were stationed outside the theatre who distributed hand-bills to patrons asserting that the plaintiff was unfair to organized labour; they also caused automobiles to parade before the theatre carrying banners upon which similar words were inscribed. The result of this course of conduct was that the plaintiff's receipts fell off very considerably. This conduct was admitted by the defendants' counsel, who indeed boldly proclaimed and justified it on the ground that the object was to compel the plaintiff to reinstate the members of the Union who had been withdrawn. They do not admit the unlawfulness of the proceeding, they say it was peaceful persuasion; that there was no malice in it, and that the intention was to effect a legitimate object. They further argued that they had the right to injure the plaintiff if by doing so they could bring about their purpose, in what was termed, a peaceful manner.

Even assuming that they conducted themselves in a peaceful manner, the question is, had they the right to bring about what was virtually a boycott of the plaintiff. The defendants object in distributing the hand-bills and in parading with banners, was unquestionably to prevent persons from patronising the theatre. No matter how peaceably this may have been done, and even admitting the absence of actual malice, yet I think it was an actionable wrong done by these defendants, in combination, with the object of compelling the plaintiff by inflicting loss upon him to do something from which he had a legal right to abstain from doing. The case falls clearly within the principle of *Quinn v. Leathem* (1901) A.C. 495. It is distinguishable from such cases as *Wardlock v. Operative Printers* (1906), 22 T.L.R. 327, in which Vaughan-Williams, L. J., said:—

> "I am of opinion that there is no evidence that the comfort of the plaintiffs or the ordinary enjoyment of the Botolph Printing Works was seriously interfered with by the watching and besetting."

The Act of this Province, chap, 258, R.S.B.C. does not assist the defendants. It would protect them only against civil liability for the act of communicating information to workmen, concerning the hiring with the employer and against liability for "persuading or indeavouring to persuade by fair and reasonable argument without unlawful threats, intimidation or other unlawful acts," and against liability for warning workmen against seeking employment from the recreant employer. It does not protect them from liability for conspiring to injure the employer in his business and from intentionally injuring him.

I would dismiss the appeal.

Dissenting Judgment of Mr. Justice M. A. MacDonald

In my opinion this appeal is determined by deciding whether or not the actions complained of on the part of the Appellants are within sections 2 and 3 of chapter 258, R.S.B.C. 1924, an Act relating to Trade Unions. If, on the facts disclosed, the Appellants enjoy immunity under the Act, that ends the matter. Little assistance is obtained from decisions on informations laid arising out of similar or somewhat similar conduct on the part of strikers under section 501 of the Criminal Code. The Provincial Trade Unions Act is *intra vires* and the Federal Act (sec. 501) does not purport to declare that actions relating to the exercise of civil rights which are legalized by sections 2 and 3 of the Provincial Act are criminal.

The parts of sections 2 and 3 which are applicable, omitting words not material, are as follows:—

> 2. "No....trade union....shall be enjoined....nor shall it or its funds....be made liable in damages for communicating to any workmen....labourer, employee, or person, facts respecting employment or hiring by or with any employer, producer, or consumer, or distributor of the products of labour or the purchase of such products or for persuading, or endeavouring to persuade by fair or reasonable argument, without unlawful threats, intimidation or other unlawful acts, such workmen....

labourer, employee or person, to refuse to become the employee or customer of any such employer, producer, consumer or distributor of the products of labour."

3. "No such trade union....shall be enjoined or liable in damages, nor shall its funds be liable in damages for publishing information with regard to a strike....or other labour grievance or trouble, or for warning workmen....or other persons from purchasing, buying or consuming products produced or distributed by the employer of labour."

In the English Act, 5 & 6 Ed. vii. 1906, chapter 47, the words "Trade Dispute" are used. Here we have in section 3 words of similar import, viz., "labour grievance."

In the case at bar the facts were as follows: The Respondent is a theatrical manager carrying on business at the "Empress Theatre," Vancouver. Up to January 10, 1926, he employed a crew of seven stage hands to assist in scene shifting and the various duties connected with back-stage work. Two weeks previously notice was given to the foreman of the stage crew, advising that only five of the seven would be employed after January 11, 1926. The Respondent was not obliged by contract to continue to employ seven men in this work. The unsigned contract produced, said to have been affirmed by a letter of acceptance would not, in any event, obligate the Respondent to continuously engage seven stage hands regardless of his own requirements. If, however, the Appellants in caring for the welfare of its members choose to take the position that seven men should be engaged to do certain work instead of five, they may do so and may take means to force compliance with their views provided they do not overstep the limits set by sections 2 and 3 of the Act referred to.

According to the evidence a few of the striking stage employees appeared on the street in motor cars carrying banners advising the public that the "Empress Theatre" was unfair to organized labour. They distributed hand-bills in hotels and other places and threw them into motor cars around the theatre. These handbills read as follows:—

> "It is illegal to boycott but this is to inform the theatre-going public of greater Vancouver that the Empress Theatre is unfair to organized labour. Conditions enjoyed by the stage employees for eighteen years are now denied them by the present management."

Some of the words were in large type and the whole so arranged as to attract the greatest attention. Further, two or three of them stood on the curb while the doors of the theatre were open to the public distributing the hand-bills. These men were members of Local Union 118. I do not find from the evidence that any noisy demonstrations occurred or that any conduct was resorted to amounting to a nuisance—in fact, the distribution of the handbills around the theatre and fairly generally throughout the city and the display of banners on motor cars would appear to be the full extent of their activity.

The question arises—were the foregoing acts permitted by sections 2 and 3 of the Act referred to? If it amounted to no more than "communicating to any person" (I think the word "person" embraces and was intended to embrace, members of the public) facts respecting employment or if it was simply an effort to persuade the public "by fair or reasonable argument," not to patronize the theatre, section 2 would afford immunity. As the learned trial judge points out, however, the hand-bills set out not "facts" but opinions. At best it contains mixed facts and opinion with the facts not fairly stated. A true statement of fact would be that the employer insisted on engaging five men instead of seven to do a certain amount of work. The assertion was made that the Respondent was "unfair to organized labour". The Appellants may have honestly thought so; others might well believe that in the absence of agreement the employer should be at liberty to employ simply the number of men he thought necessary to do the work and no more. I do not agree that the statements contained in the handbills should be regarded as the communication to the public of facts respecting employment. Not a single fact in respect to the labour grievance in question was set out; no one could form from these hand bills a true view of the facts giving rise to the dispute.

The next point is—can the statements be regarded as "fair or reasonable argument"? That is for the Court to decide on the facts in each case. This phrase is broader than the "communication of facts." Opinions might be stated if they could be regarded as fair or reasonable argument. The situation would be identical if instead of distributing hand bills these members of Appellant's Union engaged in conversation with possible patrons of the theatre using the words printed on the hand bills. I cannot think that it is fair or reasonable argument for one party to the dispute to say that the other is unfair to organized labour. The purpose of the Act is to enable labour unions to enlist the sympathy of the public and bring moral pressure to bear on the employer by disseminating facts or by reasonable argument. How can the public appraise the merits of a dispute by having placed before them the opinion of one of the parties thereto as to the conduct of the other without any of the true facts being disclosed to enable those addressed to reach a just conclusion. These hand bills might convey all sorts of suggestions not warranted by the true facts. It might be thought that employees were overworked, under paid, or compelled to work under insanitary conditions or for longer hours than usual. The public could not possibly learn from the hand bills that the real cause of the dispute was the effort on the part of the Appellants to compel the Respondent to employ more men than the work required. How can it be said, having regard to the purpose of the Act, viz., to enlist public sympathy and gain support by "communicating facts" or by engaging in "fair or reasonable argument" that the hand bills answer either requirement? This is not to say that hand bills cannot be distributed. It only means that their contents must be within the provisions of the Act.

Section 3, however, is more favourable to the Appellants. First, I think it should be held, as pointed out by Russell, J., in *Brimalow v. Carson* (1924) W.N. 7, at p. 8,—

> "that the business of presenting histrionic performances to the public for profit might fairly be described as a trade or industry

in which many persons, including actors, were employed."

I think that theatre goers are the purchasers of products produced or distributed by an employer of labour and are within the meaning of the words used in the latter part of the section. That being so, it is permissible to "warn.... persons from purchasing, buying or consuming products produced or distributed by the employer of labour party to such strike, lock-out, labour grievance or trouble during its continuance." Warn in respect to what? No details are stipulated as to the nature of, or the supporting facts, if any, to be given as the basis of such warning. It is simply a warning in respect to a labour grievance or trouble during its continuance. The Legislature has, in effect, provided that labour unions may warn customers of an employer with whom they have differences of the fact, that a labour grievance exists. It is anomalous that the same state of facts which fall short of granting immunity under section 2 should be effective for that purpose under section 3, but the Appellants have the benefit of both sections. If section 3 standing by itself is unambiguous it is not necessary to resort to section 2 to aid in its interpretation. It is not necessary that the "warning" should be based on "fair or reasonable argument" or confined to "communicating facts" as in section 2. If such was intended these words should have been incorporated in section 3. If the hand bills and banners answer the general description of a warning to intending patrons immunity is secured. One might suggest that the warning should not mislead the public as to the true facts—that it should not contain the expression of a biassed opinion or make unwarranted assertions. But these considerations concern the law making body not the Courts. I must hold that however crude the means employed, the hand bills and banners did convey a warning of the existence of a strike or of a labour grievance and that it affords an answer to the Respondent's claim. It cannot be said that any one reading these hand bills would not receive a warning that a trade dispute was going on. He may not, indeed will not, get the true facts in regard to it but he does get a warning.

I have considered the authorities to which we were referred but do not feel that it is necessary to add anything further, except to say that I do not find that the acts complained of were accompanied by unlawful threats or intimidation, nor do I think (without discussing whether or not the element of malice is an ingredient) that acts performed pursuant to legislative permission should be regarded as done maliciously.

I would allow the appeal.

The Act relating to Trade Unions, referred to in the foregoing judgment, is as follows:—

1. No trade union or any combination of workmen or employees in British Columbia nor the trustees of any such union or combination in their representative capacity, shall be liable in damages for any wrongful act of commission or omission in connection with any strike, lock-out, or trade or labour dispute, unless the members of such union, or combination, or its council, committee, or other governing body, acting within the authority or jurisdiction given such council, committee, or other governing body, by the rules, regulations, or directions of such union or combination, or the resolutions or directions of its members resident in the locality or a majority thereof, shall have authorized or shall have been a concurring party in such wrongful act.

2. No such trade union or association shall be enjoined, nor shall any officer, member, agent, or servant of such union or association or any person be enjoined, nor shall it or its funds or any such officer, member, agent, servant, or other person be made liable in damages for communicating to any workman, artisan, labourer, employee, or person facts respecting employment or hiring by or with any employer, producer, or consumer or distributor of the products of labour or the purchase of such products, or for persuading or endeavouring to persuade by fair or reasonable argument, without unlawful threats, intimidation, or other unlawful acts, such last-named workman, artisan, labourer, employee, or person, at the expiration of any existing contract, not to renew the same or to refuse to become the employee or customer of any such employer, producer, consumer, or distributor of the products of labour.

3. No such trade union or association, or its officer, member, agent, or servant, or other person, shall be enjoined or liable in damages, nor shall its funds be liable in damages for publishing information with regard to a strike or lock-out, or proposed or expected strike or lock-out, or other labour grievance or trouble, or for warning workmen, artisans, labourers, or employees or other persons against seeking or urging workmen, artisans, labourers, employees or other persons not to seek employment in the locality affected by such strike, lock-out, labour grievance or trouble, or from purchasing, buying, or consuming products produced or distributed by the employer of labour party to such strike, lock-out, labour grievance or trouble, during its continuance.

Definition of "Dependent Child" in Ontario

In an action under the Fatal Accidents Act of Ontario, heard in appeal by the Ontario Supreme Court in December, 1926, the question arose of the right of an illegitimate child to recover damages for the death of his father through an accident due to the negligence of the defendant. The evidence showed that the boy had been adopted and maintained by the deceased. The judgment said: "The law seems quite clear that under Lord Campbell's Act* as originally framed and in force in England, the child would have no right of action. The language of the Ontario statute, however, differs materially from the English statute as originally passed.

"By section 2 (*a*) of the Fatal Accidents Act, it is provided that: 'Child' shall include

*A note on "Lord Campbell's Act" was given in the LABOUR GAZETTE, December, 1926, page 1179.

son, daughter, grandson, granddaughter, stepson, stepdaughter, adopted child, and a person to whom the deceased stood *in loco parentis*. Also subsection (*b*) that the word 'Parent' shall include father, mother, grandfather, grandmother, stepfather, stepmother, a person who adopted a child, and a person who stood *in loco parentis* to the deceased. The very wide meanings given by this section to the word 'child' and to the word 'parent' were not embodied in the English statute. It was there held that an illegitimate child of the deceased did not come within the benefit of the statute."

"In considering the construction to be placed upon the language of the Ontario statute, it is proper to note that the Legislature cannot have intended the relationship of one *in loco parentis* to be equivalent to that existing in a case of adoption, whether or not the adoption were one complying with the requirements of the statute in that behalf, because the definition of the word "child" expressly mentions both an adopted child and also one to whom the deceased stood *in loco parentis*. It seems to me proper, therefore, to give the latter expression a wider or at least a different meaning.

"It is to be noted also that even under the English Act the right to recover damages does not depend upon the existence of a legal right on the part of the plaintiff to support or maintenance by the deceased while he was living, but is based upon a reasonable expectation of pecuniary benefit. If, therefore, the claimant come within one of the classes of persons to whom the right of action is given by the statute, a reasonable expectation of pecuniary benefit supports a claim for damages. In the present case I am of opinion that the deceased had placed himself *in loco parentis* within the meaning of the Ontario statute with respect to the child and that therefore the latter is entitled to recover damages."

Employee's Bond may be Vitiated by Misrepresentation

The treasurer of a rural municipality in Manitoba was found by audit to have embezzled a large sum of money from the municipality, and was discharged from his office, and later on was convicted and sentenced to a term of imprisonment. The Rural Municipality Act of Saskatchewan provides that the treasurer shall give security to the municipal council for his integrity and the faithful observance of his duties, such security to be in the form of a bond or policy of guarantee of a corporation empowered by law to grant such securities. In accordance with this provision the treasurer had secured a corporation bond purporting to indemnify the municipality in the sum of $3,000 against any loss which it might suffer by reason of any dishonest act committed by him. The municipality therefore sought to recover from the corporation the whole sum of $3,000, its losses through the treasurer's dishonesty having exceeded that amount. The corporation denied liability on the ground that material facts relating to the ex-treasurer's previous record had not been disclosed to them when they furnished the bond. The Saskatchewan Court of Appeal confirmed the judgment of the trial court, which found that a contract of suretyship is vitiated for non-disclosure of material facts, when such non-disclosure constitutes a misrepresentation. The defendants, it was held, were entitled to conclude that the municipal authorities would not employ or continue in their employment a treasurer, who, they knew, had appropriated to his own use the funds of another municipality. Non-disclosure by the municipality of the treasurer's past record therefore constituted a representation to the corporation that, so far as the municipal authorities were aware, the treasurer was an honest official. Such representation being false the contract was held to be vitiated by that misrepresentation.

Injured Workman refusing to undergo Operation does not forfeit Compensation

A workman employed by a firm of building contractors in the Province of Quebec sustained a rupture while engaged in his duties, and applied for compensation under the Workmen's Compensation Act. The employing firm opposed the claim on the grounds that the plaintiff's hernia was due to his general state of health, and that he had not consented to undergo an operation by means of a local anesthetic. The Superior Court at Montreal found that the workman was not obliged to undergo an operation which he believed might endanger his life, and awarded him compensation amounting to $620.

—(Quebec—Vaccaro versus Reid Brothers.)

Charges Against U.M.W. of America Officers are Dropped

Four cases in which local officials of the United Mine Workers of America were involved in charges of intimidation were dropped when they came up for hearing in the Nova Scotia Supreme Court in February. The Crown prosecutor announced that this course was followed on instructions from the attorney general of the province. The cases arose out of an alleged occurrence at Sydney Mines, on or about July 24, 1926, at a time when the United Mine Workers were engaged in reorganizing the miners of the province to 100 per cent strength. According to evidence at the preliminary hearing, members of the One Big Union were going to their work at Princess Pit, when they were stopped by a crowd of United Mine Workers. They alleged they were taken hold of, marched up and down, urged to join the United Mine Workers, and told if they did not they would be ducked in the reservoir, or thrown down the shaft. The magistrate committed the accused for trial, and true bills were found by the grand jury at the October term. It was announced at the time by the Crown that the cases had been set over to the February term.

Occupational Diseases Non-compensable in Texas

The Court of Civil Appeals of Texas recently confirmed the decision of the Industrial Accident Board in refusing compensation to a workman who had contracted nephritis in the course of his employment by an oil corporation, resulting in total and permanent incapacity. The Board refused the application on the ground that their authority extended only to accidental injuries, while the claimant's condition was the result of a gradual affection. Moreover, in an alternative action against the company for damages for negligence, the appeal court found that the appellant's employer being a subscriber under the compensation law, the employee had waived his right of action at common law against his employer. It was held further that the common law did not allow recovery for occupational or industrial diseases. Commenting on this decision the *Monthly Labour Review*, published by the United States Department of Labour, says: "It is obvious that so to construe the compensation law is to give it an effect that differs from a widely, if not generally, accepted position that for injuries to which the compensation law does not apply, the action for damages remains unaffected. To say that an employee waives all rights of action at common law while accepting a compensation statute which covers only a part of the field of industrial injury is to confer a doubtful benefit; and it would seem difficult to justify such a position either in logic or as an exemplification of the 'liberal construction' that is so often referred to in interpretations of compensation statutes."

THE LABOUR GAZETTE

PREPARED AND EDITED IN
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 27] APRIL, 1927 [NUMBER 4

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A FURTHER increase was shown in the volume of industrial employment in Canada at the beginning of March, the situation continuing to be more favourable than on the corresponding date in any of the last six years. This statement is based on statistics tabulated by the Dominion Bureau of Statistics from returns received from 5,813 of the larger employers of labour, each with a minimum of fifteen employees, in industries other than agriculture and fishing. The working forces of these firms aggregated 795,163 persons, as compared with 788,148 in the preceding month. The employment index number (based upon the number of employees of the reporting firms in January, 1920, as 100) stood at 96.3 on March 1, as compared with 95.4 at the beginning of February and with 91.5, 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Reports received from the offices of the Employment Service of Canada showed that the volume of business transacted during February, as indicated by the average daily placement of applicants for employment, was 8 per cent less than in the previous month, but two per cent greater than in February, 1926. The decline from the previous month was due chiefly to decreases in the demand from the logging and construction industries, partly offset by increases in placements in farming. At the beginning of March the percentage of unemployment among members of local trade unions stood at 6.5 as compared with percentages of 6.4 at the beginning of February, 1927, and 8.1 at the beginning of March, 1926. The percentage for March is based on the returns received by the Department of Labour from 1,571 local trade unions, with a total membership of 162,042 persons.

The average cost of a weekly family budget of twenty-nine staple foods was $11.05 at the beginning of March, as compared with $11.23 for February; $11.46 for March, 1926; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $16.92 for June, 1920 (the peak); $15.98 for March, 1920; $12.66 for March, 1918; and $7.68 for March, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1913 as 100, declined to 148.7 for March, as compared with 150.1 for February; 160.1 for March, 1926; 161.6 for March, 1925; 154.4 for March, 1924; 155.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 241.3 for March, 1920; 256.7 for May, 1920 (the peak); and 194.3 for May, 1918.

The time loss due to industrial disputes in March, 1927, showed a slight increase in February, but a decrease from the figure for March, 1926. Ten disputes were in existence at some time during the month, involving 520 workpeople, and resulting in the loss of 7,312 working days. Corresponding figures for February, 1927, were: eleven disputes, 402 employees, and 7,190 working days; and for March, 1926, fourteen disputes, 1,032 employees, and 14,269 working days.

Industrial Disputes Investigation Act, 1907

During March the Department received a report from the Board of Conciliation and Investigation appointed in connection with the dispute between the shipping interests at the port of Saint John, N.B., and their checkers and coopers. Five applications for the establishment of Boards were received during the month. A full account of the proceedings during the month is given on page 358.

Combines Investigation Act, 1923

The hearing of evidence in connection with the inquiry into the Proprietary Articles Trade Association opened before the Commissioner, Mr. L. V. O'Connor, at Montreal on January 7, Mr. A. R. McMaster, K.C., conducting the investigation, and Sir William Glyn-Jones representing the Association assisted by Mr. J. C. McRuer, Mr. F. S. Mearns, Mr. Alexander Cinq-Mars, K.C., and Mr. Harry Hereford. The sessions, which are held in private, extended over ten days at Montreal, 12 days at Toronto and eight days at Winnipeg. The Commissioner sat for one day at Lindsay. Hearings are continuing at Mon-

treal, and it is expected that the taking of evidence will be completed by the end of the month.

Postponement of Compensation Act of Quebec

As the March issue of the Labour Gazette was going to press a government bill was introduced in the legislature of the Province of Quebec postponing for one year the date on which the Workmen's Compensation Act, 1926, is to become effective. The amending act was passed before the end of March. The text of the Act of 1926 was given in the last issue, on page 272. The Hon. A. Galipeault minister of Public Works and Labour, explained that the chief reason for postponing the operation of the act lay in the high rates for insurance against accidents that were being charged by insurance companies. He stated that although a year had elapsed since the Act was passed the companies had failed to produce a schedule of rates until the past few weeks, and the rates were so high as to threaten the existence of smaller industries, while the larger concerns had decided to join together and form a mutual insurance corporation to cover industrial accident risks, (Labour Gazette, February, page 126). The minister referred to the requests lately presented to the government by labour organizations for the establishment of a commission or board system of administration such as exists in other provinces. He stated that the government had an open mind on that question, and that if the commission system were shown to be the best it might still be established. The Hon. Premier Taschereau also said: "If the solution of this question is a commission, and if we are here next session, there will be a commission. If it is the only workable system then we will grant a commission."

Superannuation for civic employees in British Columbia

The provisions of Superannuation Act of British Columbia (Labour Gazette, December, 1921, page 1444) are to be applied shortly in all the leading municipalities in the Province. Part III of this Act makes provision for the superannuation, on a contributory basis, of municipal employees. According to reports in the press, petitions for the adoption of the provincial scheme have been filed with municipal councils by employees in practically all cities and organized districts. On receipt of these petitions the councils must proceed to grant superannuation allowances. It is anticipated that five thousand government and municipal employees will be brought within the scope of the scheme before autumn. About 1,800 government employees are protected by the Superannuation Act, and some 3,200 municipal workers will be added to this number under the recent amendment to the Act making its adoption compulsory in a municipality in which three-fourths of the employees so petition. An account of the labour legislation enacted at the recent session of the provincial legislature is given on another page of this issue.

Position of Ontario on old age pensions

Following the passing of the Old Age Pensions Act by the Parliament of Canada on March 25, the Hon. Premier Howard Ferguson announced in the Ontario legislature on the same date that the government of the Province hoped to take part in a full discussion of old age pensions at the Dominion and provincial conference to be held at Ottawa during the present year. After that conference the government of Ontario would be in a position to decide on its policy. The subject was raised in the legislature in the course of a debate on the estimates for the provincial Department of Health, and for the work of department nurses among poor people in scattered communities.

Effects of provincial minimum wage laws

An attempt to estimate the effects of minimum wage legislation on the wage rates of female employees in various provinces in Canada is made by Professor H. Michell, of Toronto, in the March issue of *Industrial Canada*. The writer finds that with the exception of Ontario and British Columbia, the reports published by the provincial minimum wage boards are too meagre to permit of any attempt to analyse the results obtained so far. In Ontario the minimum wage law has very apparently raised the whole level of women's wages by a substantial amount, while in British Columbia the results are stated to be confused.

The Ontario Minimum Wage Act has been in force since 1921, and ten main industrial groups are now covered by orders. Professor Michell gives a table showing the percentage increase in wages in five of these groups in which the records go back to 1921, these groups showing increases in 1925 as compared with 1921, as follows:—Departmental stores (Toronto) increase, 6.3 per cent; retail stores, 14.4 per cent; laundries, 7.4 per cent; paper bags and boxes, 8.8 per cent; confectionery, 15.5 per cent. The combined percentage increase in wages in these five groups

is 10.2. This increase moreover took place during a period of trade depression, in which general wages tended to fall. Between 1921 and 1925 there was a fall of about 2 per cent in "common factory labour," and of 3 per cent in "miscellaneous factory trades." Professor Michell states that these facts make the conclusion "abundantly clear" that in Ontario, while money wages have fallen in all industries employing men, they have risen sharply for women, the increase being attributable very largely to the working of the minimum wage law in the province. This improvement in wage scales for women is obtained, however, at a considerable cost to industry. Assuming that without the minimum wage law female employees would have continued to obtain in 1925 the wage rates which prevailed in 1921, he estimates the total increase in women's wages in the ten industries with minimum rates as amounting to $2,383,257.50. The writer finds evidence in the Ontario figures to show further, that minimum wage legislation tends to raise the whole wage scale in the industries covered by minimum wage orders, and is not confined in its effects to the workers who are at work at the minimum rate of wages. In this connection he quotes the report of the Ontario Board for 1923. "The lowest wages have largely disappeared, the highest wages have noticeably increased, and the intermediate wage levels are graded in an orderly fashion between these two extremes. The whole wage scale has risen."

Professor Michell states that "the results from a study of the working of the minimum wage in British Columbia are very inconclusive. For female adult workers it seems to have raised the level slightly, although even there the evidence is far from clear. In the class of workers under 18, where the incidence of the minimum wage might have been expected to bear heaviest, no appreciable result has been attained, and in four important industries, affecting over 1,000 girls, it has been unable to stop a reduction in wages of $590 per week or a trifle under $31,000 a year. That the Minimum Wage Wage Board in Vancouver is doing some useful work in having a few bad employers prosecuted seems apparent. It is greatly to be regretted that the reports from other provinces are so meagre as to make any attempt at analysis of results impossible."

Considering the subject on its economic side, the writer states that "before we arrive at a final conclusion with regard to the minimum wage, strictly from an economic standpoint, we must find out whether, with higher wages, the efficiency of the workers receiving them has been increased. If by increasing their feeling of well-being, by improving their health through better food and better living conditions, it has increased their efficiency as workers, it is worth the money."

Official Year-Book of New Zealand for 1927

The Department has received the New Zealand Official Year-Book for 1927, compiled in the Census and Statistics Office of the Dominion. In addition to the usual historical, topographical, demographic and social features, the 35th issue of this valuable work of reference contains several new sections, including one on legislation specially affecting labour, and an enlarged section on the wealth of New Zealand, dealing not only with private but public wealth, the value of land holdings, etc. All statistical, and other material has been brought up to date, the legislation enacted in 1926 being included in the new edition. An outline of labour legislation in New Zealand, based on the information contained in the Handbook, will be given in a future issue of the Labour Gazette.

Safety competitions in Canadian industries

"No accident" competitions over a given period are now in favour in Canada as an effective method of promoting safer conditions for industrial workers. References to two such competitions will be found on another page of this issue. In 1926 the Spruce Falls Power and Paper Company at Kapuskasing, Ontario, won a silver shield offered to the "Safest Mill in Canada". This shield was offered by the *Pulp and Paper Magazine* for competition among the larger establishments in that industry. A similar competition for smaller plants was won by the Don Valley Paper Company, Toronto. Another event of the same character was the contest which resulted in the awarding to the Port Colborne plant of the Canada Cement Company of a trophy won for a perfect accident record over an entire year (Labour Gazette, January, 1927, page 70). The International Harvester works of Chatham, Ontario, recently established a world record for a factory of its size by going 908 days without a single lost-time accident (Labour Gazette, February, 1927, p. 183). These contests bring results because they encourage deliberate effort and organization for safety. They have the further advantage, as the *Pulp and Paper Magazine* has pointed out, of introducing a standard form of reporting accidents that may lead to the better co-ordination of safety efforts.

One of the latest safety competitions is that begun in the coal mines of Nova Scotia (reference to this event is made on another page). The April issue of *Industrial Safety News* (published by the Nova Scotia Accident Prevention Association) says of the safety campaign recently opened by the British Empire Steel Corporation:

"A pleasing feature of the safety campaign being inaugurated in the collieries of the corporation is the attitude of co-operation on the part of the executive of the United Mine Workers, and their efforts to have all the locals appoint safety committees to work in conjunction with the corporation's safety department. Between the operators and the workmen, in many matters affecting the operation of the collieries, there may be a wide difference of opinion, but where the prevention of accidents is concerned there should be no divergent views between these parties. The workmen killed, injured partially and permanently, the dependent widows and children, and the contribution of more than $5,000,000 by the coal mining industry of this province to the Workmen's Compensation Board during the past ten years, are mute testimony to the ravages of industrial accidents. Humane considerations and economic necessity demand that the operators and men co-operate in the elimination of hazards and the institution of safe working conditions and practices. This spirit of co-operation would seem to be now present, and the accident experience of the collieries under the corporation's control should be considerably improved during the year 1927."

Computation of accident frequency rates

The International Association of Industrial Accident Boards and Commissions recently adopted certain principles for the correct recording of industrial accidents. These rules are explained in a recent bulletin of the Pennsylvania Department of Labour and Industry, to which reference is made on another page of this issue, in the section dealing with "Safety and Health." It is held that for the purpose of comparative statistical records only "lost time" accidents should be considered. "In early attempts to compile accident statistics attention was limited to the number of persons exposed to accident. This led to the custom of expressing accidents in the terms of so many per '1,000 workers.' The term one thousand workers was indefinite and variable, because it took no account of the number of hours workmen were exposed to risk..... This method was also based on the assumption that all injuries are equal—that a broken back and a broken cuticle have the same importance in accident records. Obviously rates expressed in terms of so variable a factor cannot be an accurate measure of the accident hazard. To correct these defects the man-hours worked per year were used. The number of man-hours per year proved, however, not to be an easily comprehensible or convenient base upon which to calculate accident rates. For convenience and greater clearness man-hours were converted into 'full-time workers.' The full-time worker was defined as one who works 10 hours per day for 300 days per year, or 3,000 hours. It became evident, however, that there were certain valid objections to the use of this basis for computing accident rates. * * * It was soon realized that any unit of measure which suggested the length of time men do work or should work was undesirable. Time, however, is constant and gives a stable basis upon which to calculate accident rates.

"Rates based upon the actual number of hours during which employees are exposed to hazard will measure the actual accident hazard regardless of the number of hours worked per day or the number of days worked per year. It was, therefore, suggested that accident rates, both frequency and severity rates, be computed on the basis of 1,000 hours' exposure. The adoption of 1,000 hours' exposure rids us forever of any such complications as are mentioned above, and gives a unit which is convenient in size and will remain unaffected by changes in the working day or variation in the working year. This unit has the advantage that accident rates measured by any other unit of exposure may be readily expressed in terms of the 1,000-hour unit and vice versa. For instance, all accident rates computed in units of the 300-day worker may be converted into rates per 1,000 hours' exposure by dividing by 3. Frequency rates are to be expressed in rates per 1,000 or 1,000,000 hours' exposure of the working force. Severity rates are to be expressed as days lost per 1,000 hours' exposure of the working force."

British Chambers of Commerce favour personal contact in industry

The Association of British Chambers of Commerce appointed a special committee last year to consider the subject of industrial unrest. This committee has lately issued a report on the question of the necessity for more direct contact between employers and workmen. The committee state the causes of existing difficulties in the way of good relationship as follows:—

In the days of personal ownership, the proprietor of a firm knew all his men personally,

but in the general progress which is continually going on the personal employer has given way to the limited liability company, and to-day the limited liability company is in many cases giving way to the large combine or group of companies. In the same way the individual workman is now represented by the trade union, and the trade unions have in turn formed themselves into a federation of trade unions. On the employer's side there are now associations of employers and these associations are in turn combined in large federations.

The results of these evolutions are primarily reflected in the divided loyalties of those who are constituents of those large federations. The workman is divided in his loyalty to his employer and to his trade union, the employer is divided in his loyalty to his work-people and to his association. The Committee understand it has been alleged that there is a general suspicion in the minds of organized labour in regard to the attitude of organized employers towards them.

The Committee proceed to suggest some measures which might be taken towards a better understanding between employers and their workmen:—

There is need for the publication of simple economic principles, and also facts regarding the position of industry generally, including the wages paid and conditions of employment in other countries. While individual employers might do something in the way of supplying information, the teaching of such subjects would necessarily be mainly done by organizations which have for their object economic study circles and the giving of general industrial information. Continuous personal contact might also be maintained through the medium of a works magazine in which matters of interest concerning the management and the workers could be periodically recorded. Advantage should be taken of the opportunities in connection with welfare work now largely in operation in many industries and in the administration of benevolent and pension funds for bringing employers and employed into personal contact. Where appropriate machinery exists for the regulation of wages, the Committee are of the opinion that an opportunity is thereby afforded of discussing the position of the industries concerned and the various matters which affect results from time to time, having special regard to conditions in competing countries.

Australian decision on 44-hours week

By a majority the full Federal Arbitration Court recently fixed a standard working week for normal industries throughout Australia at forty-four hours. Chief Judge Dethridge and Judge Beeby favoured a forty-four hours' week and Judge Lukin opposed it. This decision was given in a claim by the Amalgamated Engineering Union, which was fixed as a test case for normal industries. The case is said to be the most far-reaching ever decided by the court. There are 124 Federal unions with a membership of 656,032 working under Federal awards, and if any of these unions are able to satisfy the court that they are engaged in normal industries they will be entitled to a forty-four hours' week. The case lasted from August 24 until the Christmas Vacation and the judgment exceeded 60,000 words.

Social standards for Indian immigrants in South Africa

The South African and Indian Governments held a conference at Cape Town last December to consider difficulties arising out of the existing South African policy limiting the admission of British Indian immigrants. An agreement was reached by the delegates, which has since been approved by both governments. It is framed in accordance with the principle that British Indians who wish to remain in South Africa may do so on condition that they are prepared to adopt western standards of life. If they comply with this condition they may go about their concerns as freely as citizens of European origin, and will not be segregated. The main points of the agreement are as follows:—

(1) Both governments reaffirm recognition of the right of the Union of South Africa to use all just and legitimate means for the maintenance of Western standards of life;

(2) The Union Government recognizes that Indians domiciled in the Union who are prepared to conform to Western standards of life should be enabled to do so;

(3) The Union Government will organize a scheme of assisted emigration to India or other countries where Western standards are not required. Union domicile will be lost after three years' continuous absence, this provision applying generally and not only to Indians. Indians desiring to return to the Union within three years must refund the cost of the assistance granted them under the emigration scheme;

(4) The Government of India recognizes the obligation to look after the Indians on their arrival in India;

(5) The admission to the Union of the wives and children, who are minors, of Indians will be regulated by Paragraph 3 of Resolution 21 of the Imperial Conference of 1918*;

* "Indians already permanently domiciled in the other British countries should be allowed to bring in their wives and minor children on condition (*a*) that not more than one wife and her children shall be admitted for each such Indian, and (*b*) that each individual so admitted shall be certified by the Government of India as being the lawful wife or child of such Indian."

(6) The Union Government agrees not to proceed further with the Areas Reservation Bill;

(7) Both Governments agree to watch the working of the agreement, exchanging views from time to time as experience may suggest and

(8) In order to secure continuous co-operation between the two Governments, the Indian Government is to appoint an agent in the Union.

Jurisdictional disputes in the building trades

The origin and constitution of the National Board for Jurisdictional Awards in the building industry of the United States were described in the Labour Gazette, January, 1921, page 63. It will be recalled that in 1918 the Building Trades Department of the American Federation of Labour became concerned with the prevalence of jurisdictional disputes within the construction industry. Conferences with the presidents of the several international unions forming this department were held for the purpose of devising some method of diminishing the evil. The National Board was established in 1919 with the support of the unions concerned and of the building contractors, engineers, architects and other organizations of employers. The results obtained by the Board are summed up in a recent statement prepared by a joint committee of the American Institute of Architects and the American Engineering Council:—

"It is clearly apparent from all information obtainable, even from the ranks of those who have looked askance upon the work of the Board, that its work has enormously reduced the number of jurisdictional strikes and the economic losses associated therewith. It is stated upon good authority that the decisions of the Board have reduced by some 35 to 90 per cent the number of jurisdiction strikes within the building industry. The economic gain, due to this accomplishment, is estimated to be many millions per year. It is said on good authority that if the Board is sustained and continues to function it is only a question of a relatively few years until there will be no such thing as a jurisdictional strike within the construction industry * * * The accomplishments of the Board are considered by many as having been really remarkable in the light of the circumstances under which it has had to work. It has had no permanent staff; the men on the Board receive no compensation; all of them are not entirely reimbursed for the actual expenses involved in attending meetings and it has had no funds with which to pay for secretarial, stenographic, and other necessary services. The Board has had no funds with which to disseminate among those interested information that it is essential they should have. Due to these circumstances the Board has not been fully understood; there is a lack of specific information as to how it functions and what it is doing."

The chief failure in connection with the work of the Board has been in connection with a dispute between the carpenters' and sheet metal workers' organizations in the matter of installing metal doors and trim. The Board awarded this work to the sheet metal workers, and the carpenters refused to accept the decision, being the only union so far that has declined to accept a decision of the Board.

International Congress for Child Protection

An International Congress for Child Protection is being organized by the League of Red Cross Societies, the International Association for the Promotion of Child Welfare, the International Union for the Protection of Infants, and the "Save the Children" Fund International Union, to be held in Paris from July 2-5, 1928.

The meeting will be held in connection with the International Congress for Relief, which will take place at Paris from July 5-8, and with the International Conference on Social Service, which will also take place at Paris, from July 8-13.

During the Congress, the International Association for the Promotion of Child Welfare will hold its Seventh Session, and the Executive Committee of the International Union for the Protection of Infants will also meet. The members of the three Congresses will meet at the Sorbonne on July 8. The Congress will include the following sections: (1) maternity; (2) infancy; (3) childhood; (4) social service. and (5) child distress and abandonment.

President Green states benefits of collective bargaining

President William Green, of the American Federation of Labour, in a recent address to the students at Williams College, Massachusetts, stated that the principle of collective bargaining formed the workers' contribution to the advancement of industrial peace. "It is the workers' plan and their contention that misunderstanding between employers and employees can be eliminated; that the causes which make for industrial strife can be greatly reduced, and that efficiency, co-operation and good-will can be brought about. The breach between employers and employees can be bridged by personal contact, frank discussion and common understanding arrived at through collective bargaining. * * * It is my opinion that the so-called 'irrepressible conflict' which some economists and industrial observers claim ex-

ists between the employers and the employees can be terminated. Good judgment and reciprocal concessions in arriving at a settlement of industrial disputes can bring about a realization of this happy result. If there is a will and a purpose on the part of all concerned to promote industrial peace there is no obstacle which cannot be overcome through the process of collective bargaining. There must be contact between the owners of industrial enterprises and their workers. This contact on the part of the owners may be brought about through management and on the part of the workers through their union and their union representatives. * * * The future growth and expansion of industry and industrial enterprise will make collective bargaining necessary to industrial success. The entire co-operation of all concerned and interested in manufacturing and industry can only be brought about in this way."

Report of Toronto Civic Salary Commission

A commission appointed to investigate civic salaries in Toronto recently presented their report to the City Board of Control. The scope of the inquiry included a total of 4,306 positions with a total salary on a yearly basis of $7,115,925.87 and an average salary of $1,652.56. Of the total positions, 210 carried yearly salaries under $1,000; 1,934 employees were receiving between $1,001 and $1,500; 1,752 employees were receiving between $1,501 and $2,000. Of the total employees 90.48 per cent were in receipt of salaries of $2,000 and under. In regard to a minimum rate of wages the commissioners state their opinion that the minimum rate for an adult worker of 60 cents an hour on a 48-hour basis, or $1,497.60 per annum, is fair remuneration, and it is not by any means excessive in view of living conditions, as compared with those conditions that prevailed prior to the Great War. As regards the minimum wage they are of the opinion that a married man, with a family, in order to live in comfortable circumstances and give his children the opportunities they are entitled to in an educational way, should not receive less than the minimum of $28.80 per week. Juniors coming into the different departments, starting at the salary which they think is fair for an office assistant, $10 a week, or $520 per year, should receive increases (subject, of course, to meritorious service), so that when of marriageable age, they would be receiving at least $28.80, and be on a par with those entering the service from the outside employments at least to the extent of the minimum wage. A junior entering the service at 17 should at 25, they state, be worth $1,500 to $1,800 a year. The proposed range for a junior clerk is from $700 to $1,000. The minimum and maximum for stenographers are $1,150 and $1,560. After one year in a position it is recommended that a clerk receive $1,250, after two years $1,350, and after three years $1,450, the maximum to be reached on the recommendation of the department, $1,560.

The commissioners recommend that consideration be given without delay to the establishment of a system of retirement pensions. "We are strongly of the opinion," they state, "that the principal cause underlying irregularities in the service is the lack of a pension fund, or any superannuation fund."

Industrial mission from Australia

An industrial mission to the United States, consisting of eight members representative in equal numbers of employers and workers, was appointed in January by the Australian Commonwealth to make a thorough investigation of the methods employed in, and the working conditions associated with, the manufacturing industries of the United States, and to report thereon. The mission reached Victoria, B.C., in March and proceeded at once to the United States. It is hoped by the Government that the delegation will be able to submit recommendations which will increase the efficiency and promote the development of secondary industries in Australia. Two women observers accompanied the delegation but the scope of their inquiries will be confined to the conditions of employment of women in the manufacturing industries of the United States.

Joint council restored in British flour milling industry

The employers in the flour milling industry in Great Britain, as the result of a recent investigation into the Whitley Council system, recently decided that a fresh effort should be made to re-establish works committees in mills where they had fallen in disuse since the late general strike. The condition is made, however, that trade union officials may attend only by invitation of both parties, the employers on their side undertaking that only matters of domestic concern are to be discussed. Up to last year, it is stated, the Joint Industrial Council of the industry was working satisfactorily and developing a genuine and reliable good will. But after seven years of co-operation there came the general strike, in which the flour milling industry found itself involved, though two-thirds of the men in the mills held to their agreements. The

Whitley Council machinery received a shock which threatened at one time to be fatal. There had been no meeting of the Joint Industrial Council for nine months, but, as a result of the employers' inquiry, the meetings are now to be resumed. Commenting on this incident the London *Times* in its issue of March 7 said: "Not only is there to be a further trial of Whitleyism, but the machinery is to be developed by the formation of works councils in order to provide an effective means of consultation between an employer and his workpeople. So far, therefore, from demonstrating the ineffectiveness of the Whitley Council system the inquiry has tended to establish it more firmly."

Industrial education in Great Britain

The January issue of the Labour Gazette contained on page 58 an outline of the report of the Committee on Education appointed last year by the Minister of Education of England and Wales to study the relationship of education and industry. It has since been announced in the British Parliament that the government has decided to accept the recommendation of the majority of the committee and to transfer to the Ministry of Labour the central responsibility for the administration by local education authorities of choice of employment work. It also accepts the committee's proposal for the establishment of a National Juvenile Advisory Council, on which local education authorities should be strongly represented, but no final conclusion will be reached on this matter until the local education authorities have been consulted. As regards the committee's recommendation that a permanent scheme for juvenile unemployment centres should be instituted, the government is anxious to give sympathetic consideration to the matter, but considers that further examination and discussion are required, in particular on the committee's proposal that the full cost of the centres should be thrown upon the taxes. The government regards with great initial favour the committee's proposal that a system of working certificates for juveniles between 14 and 16 should be instituted, but before they adopt it they consider it necessary to consult the local educational authorities, employers and the other interests concerned.

British Government's trade-union bill.

A government bill was introduced early in April in the Parliament of Great Britain having the purpose of limiting certain existing rights of trade unions. Passage of the bill is being strenuously opposed by the Labour Party. The proposed measure would declare illegal "any strike calculated to coerce the Government or intimidate the community," and provides that anyone declaring, instigating or promoting such a strike shall be liable, on conviction, to a fine or to imprisonment not exceeding two years. It would further declare that a refusal to participate in such an illegal strike should not render a member of a trade union liable to expulsion or deprivation of benefits to which he otherwise would be entitled. Breach by a trade union of a contract for service with any political or public authority, endangering the discharge of its functions, would be liable to punishment. Trades unions would be required to keep their political funds entirely separate from other funds.

The bill proposes that picketing, when calculated to intimidate or obstruct, should be unlawful and punishable by fine or imprisonment. Picketing of residences of workers would also be made unlawful and punishable.

Civil servants would be forbidden under the bill to belong to any trade union or organization except composed solely of civil servants and whose objects are non-political and not associated directly or indirectly with any political party or organization. Violation of this requirement would render the violator liable to expulsion from the civil service.

The Minimum Wage Board of Manitoba has been brought up to its full strength of five members by the appointment of Mr. L. J. Rumford, of the Rumford Laundry Company, Winnipeg, representing the employers, and Mr. J. McClellan, representing the employees. Two vacancies had existed on the Board for a number of years.

No Chinese immigrants landed in Canada during the calendar year 1926 except those who entered under special permits as members of the diplomatic service, students, etc. During the same period 443 Japanese landed at Victoria or Vancouver, this number including 119 males, 216 females and 108 children. The largest occupational group was composed of 69 farmers and their families.

The Board of Education at Sarnia, Ontario, recently decided to establish a system of superannuation for teachers. Teachers retiring this year or next will receive 40 per cent of the maximum salary. After that they will go on the superannuation basis, receiving approximately five-twelfths of the salary earned by them at the time of their retirement. The retiring age is 62 years for female and 65 years for male teachers.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE employment situation at March 31 was reported by the Superintendents of the Employment Service of Canada to be as follows:—

The fishing industry in Nova Scotia reported fair catches, but storms towards the close of the month interfered with operations. The winter's work in the logging industry having been virtually completed, the usual seasonal lull, preparatory to river driving, was in evidence. Normal activity in the various lines of manufacturing was reported, with iron and steel showing improvement, due to orders received. A fair amount of construction was being carried on or was in prospect in the city of Halifax and the immediate vicinity, but from outside points this industry was reported to be quiet. The port of Halifax showed considerable activity, while railway transportation throughout the province was brisk. The coal mining industry showed operations on a fairly satisfactory basis, and it was anticipated that the opening of water transportation would be conducive to increased operations. Trade was stated to be fair.

In the province of New Brunswick the logging industry was rather quiet. As in Nova Scotia, the fishing industry in this province reported fairly good catches. The pulp and paper manufacturing industry continued operations at a rather high level, while other manufacturing lines remained normal. With not a great deal of construction work actually in hand, prospects for the season seemed fair. Trade was very good, as was also transportation, the winter port activities at St. John having had a good season.

Although a few orders for farm workers had been received by the Montreal employment office, not many requests for labourers of this type had yet been listed in the province of Quebec. With river driving expected shortly, not many orders from the logging industry were being received at the present time. Generally speaking manufacturing throughout the province was satisfactory. In Quebec City the leather trades were active; in Montreal the printing trade, tobacco, rubber, textiles and metals were showing improvement, but leather showed a decrease. The prospects for work in the construction group were excellent, and although not a great number of vacancies had been notified as yet, an early opening up was anticipated. Trade was commented upon as being normal. There was the usual shortage of women domestic workers, notably in Montreal. The general situation records improvement and the prospects are good.

Farm orders in Ontario are increasing, and some centres report orders as equalling or exceeding applicants in number. Some construction work had opened up in this province and much more will undoubtedly be started in the near future. Placements in this latter industry had begun and their number to date is gratifying. As customary at this season the logging industry was slow, pending the commencement of river driving. Activity in manufacturing seemed to be on the upgrade, and some additional workers—mostly skilled—were being referred to vacancies. Metal mining in Northern Ontario remained normal and a few placements were being made. The demand for women domestics was rather brisk. Conditions generally throughout Ontario were good.

Orders for farm hands received by the Manitoba employment offices were increasing, with the supply of workers keeping pace with vacancies. A heavy program of highway construction throughout Manitoba is to be undertaken and will afford employment to a considerable number of men. Other construction work, mostly small jobs, was gradually starting up. The logging industry, as affecting placements from Manitoba, had slackened off. There was not much demand for casual workers for labouring jobs throughout the province. Trade was reported from Winnipeg as being encouraging.

The bad condition of the roads had delayed the listing of farm orders with the employment offices in Saskatchewan, although there was a noticeable increase in their number; applicants were sufficient. Construction had not opened up to a very great extent. Logging camp crews were being reduced. Once again a shortage of female domestic workers was noticeable, this being partly due to the listing of farm orders. General conditions throughout Saskatchewan were quiet, this being somewhat of an off season.

Increases in the demands for farm workers were general throughout Alberta, but uncertain weather was delaying the listing of orders. Railroad construction was opening up and relieving unemployment to some extent. Prospects for building construction for 1927 were stated to be very bright throughout this province. Coal mining seemed to be very quiet. There was a good demand at the employment offices for female domestic workers.

In farming districts in the province of British Columbia there were some small demands for farm labourers. A slight improvement was noticeable in the logging and lumbering industries in some parts of this province. Mining activity remained normal, but there was scarcely any demand for additional workers. The opening of railroad construction had absorbed some unemployed labour. Building construction was rather active, with some men being taken on. Conditions generally throughout British Columbia were fair, with a promising outlook. The weather having been a little backward, an improvement in conditions simultaneously with an improvement in the weather was anticipated.

EMPLOYERS' REPORTS.

Employment at the beginning of March showed a further increase, which was rather more extensive than in earlier years of the record. The situation continued to be much better than on the same date in the years 1921-1926, the index number stand-

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

*Figures for end of previous months. †Bradstreet. ‡*Maclean Building Review* §For group figures see articles elsewhere in this issue. **Figures for four weeks ending March 26, 1927, and corresponding previous periods. ***The index of the physical volume of business includes, forestry, mining, manufacturing, employment in wholesale and retail trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes, forestry, mining, manufacturing and construction. Manufacturing includes consumers' goods and producers' goods.

ing at 96.3, as against 95.4 on February 1, and 91.5, 87.0, 90.7, 89.9, 81.9 and 88.0 on March 1, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Statements were tabulated by the Dominion Bureau of Statistics from 5,813 firms employing 795,163 persons, as compared with 788,148 at the beginning of February.

Increases in employment were shown in Quebec, Ontario and British Columbia, while in the Maritime and Prairie Provinces curtailment was indicated. In the Maritime Provinces, improvement was shown in manufactures, particularly in iron and steel works, and construction and transportation were rather busier, but logging and mining recorded seasonal losses. In Quebec, manufacturing and construction were considerably more active, while there were decreases in logging and trade. In Ontario, manufacturing recorded recovery and construction was also more active, as were transportation and communication. On the other hand, logging was seasonally slacker. In the Prairie Provinces, iron and steel, coal mining and railway transportation showed the greatest declines, while construction, lumber and pulp and paper mills reported improvement. In British Columbia, manufactures, particularly of lumber products, recorded important increases in employment; only small changes were noted in other industries.

Employment advanced in Montreal, Quebec, Toronto, Ottawa, Hamilton, Windsor and Vancouver, but in Winnipeg contractions were shown. In Montreal, continued and more pronounced gains were indicated, chiefly in manufactures, but also in construction, while trade and transportation showed curtailment. In Quebec, the improvement was mainly in manufacturing. In Toronto, iron and steel and construction reported moderate gains, while the only significant declines were in printing and musical instrument works and in local transportation. In Ottawa, employment showed a general gain. In Hamilton, iron and steel and other manufactures registered heightened activity. In Windsor and the Other Border Cities, automobile factories recorded most of the increase, while other industries showed only small changes. In Winnipeg, the bulk of the decline took place in manufacturing, but the changes were comparatively small. In Vancouver, manufacturing reported substantial improvement, while trade was seasonally slacker.

Manufacturing afforded heightened employment, the most pronounced recovery taking place in iron and steel and lumber factories; there were also important increases in vegetable food, textile and non-ferrous metal works. On the other hand, pulp and paper and animal food establishments registered reductions in employment. Logging, mining and trade showed further seasonal contractions, while communication, services and construction and maintenance recorded increased activity, the last named showing the most pronounced expansion. In transportation, the general situation was unchanged.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of March, 1927.

Trade Union Reports

The volume of unemployment among local trade unions at the end of February as shown by the returns tabulated from 1.571 labour organizations with an aggregate membership of 162,042 persons remained on practically the same level as in January, 6.5 per cent of the members being idle at the close of February as compared with 6.4 per cent in January. The situation was, however, better than in February 1926 when 8.1 per cent of the members were out of work, due to a great extent to the increase in the employment afforded Nova Scotia coal miners.

A more detailed report of the situation existing among local trade unions at the end of February will be found on another page of this issue.

Employment Office Reports.

During the month of February 1927 the offices of the Employment Service of Canada made 19,920 references to vacancies and effected a total of 18,633 placements, of which 11,932 were in regular employment and 6.701 in casual work. Of the placements in regular employment 9,106 were of men and 2,826 of women. Applications for work were received from 29,678 workers, of which 20,848 were from men and 8,830 from women, while employers notified the Service of opportunities for 13,170 men and 7,018 women, a total of 20,188 vacancies. A decline was shown in the volume of business transacted when the above figures are compared with those of the preceding month, but a slight increase was indicated when a comparison is made with the corresponding month last year, the reports for January, 1927, showing 22,922 vacancies offered, 35,675 applications made and 21,311 placements effected, while in February, 1926, there were recorded 19,823 vacancies, 29,414 applications for work and 18,157 placements in regular and casual employment. A report in detail of the work of the offices for the month of February 1927 will be found elsewhere in this issue.

Production in Certain Industries

Some figures indicating the recent movements of trade and industry are given in the table on page 354. The Dominion Bureau of Statistics reported that production of pig-iron in Canada during February, 1927, amounted to 50,695 long tons, marking a decline of 2 per cent from the output of 51,717 long tons in January, but a slight increase over the output in February a year ago. Production of basic iron totalled 27,977 tons as against 28,852 tons in January; foundry iron showed a decline of about 50 per cent to 10,811 tons, but the output of malleable iron increased to 11,907 tons from only 965 tons last month. Blast furnace charges for February included 88,393 long tons of imported iron ore, 57,814 short tons of coke and 27,046 short tons of limestone. During the month one furnace was blown in and one was blown out, leaving five furnaces in blast on February 28. The active furnaces had a capacity of 2,075 long tons per day or about 41 per cent of the total Dominion capacity and were located as follows: 2 at Sydney, N.S., 2 at Hamilton, Ont., and 1 at Sault Ste. Marie, Ont. Production of ferro-alloys at 3,601 tons showed a decline of 8 per cent over the output of 3,926 tons in the previous month. The month's output consisted mostly of the grade having a high manganese content but small quantities of ferrosilicon were also produced.

Production of steel ingots and castings in Canada during February, at 55,620 long tons, showed a decline of 5 per cent from the 58,551 tons of January but was 5 per cent greater than the 53,157 tons reported for February, 1926. The output of steel ingots was lower at 52,144 tons as against 55,898 tons in the previous month, but steel castings rose to 3,476 tons from the 2,653 tons reported in January. Pig iron prices stood at considerably lower levels than in January. At Montreal No. 1 foundry was quoted at $27 on February 15 as compared with $28.20 on January 15 and No. 2 foundry at $26.50 as compared with $27.70. At Toronto No. 1 foundry was $24.80 and No. 2 foundry $24.30 as compared with $25.80 and $25.30 in January. These quotations brought Canadian prices in line with the weakened market for iron in the United States. The Bureau's index number for iron and its products (1913 prices=100) declined from 145.5 to 144.4 due mainly to declines in pig iron, steel billets and steel chain.

Coal Production.—Full statistics of coal production during February are not yet available. The output of coal from Canadian mines during January was 9 per cent less than the production for the preceding month, but 6 per cent greater than the average for January in the past five years. The figures were 1,561,499 tons in January as against 1,922,808 tons in December, and an average of 1,464,521 tons during the five preceding years. Of the coal producing provinces only British Columbia and New Brunswick showed gains in production over the preceding month, and Nova Scotia was the only province to show an increase over the average for the month in the five preceding years.

Building Permits and Contracts Awarded.

According to a report prepared by the Dominion Bureau of Statistics, the value of the building permits issued in sixty-three cities in Canada by the municipal authorities during the month of February, 1927, amounted to $7,778,552 as compared with $5,429,299 in January, 1927, and with $7,139,549 in February, 1926.

The *MacLean Building Review* estimates the total value of the construction contracts awarded in Canada in March, 1927, at $17,465,900, a moderate decline from the previous month and from the corresponding month a year ago. Of this amount $6,949,800, or 39.8 per cent was included in the residential classification; $5,444,300, or 31.2 per cent came under the heading of business building; public works and utilities were awarded to the value of $3,333,400, or 19.1 per cent, and industrial construction amounted to $1,738,400, or 9.9 per cent. The apportionment of contracts awarded by provinces during March, 1927, was:—Ontario, $8,309,100; Quebec, $5,185,300; British Columbia, $2,667,500; Prairie Provinces, $1,147,500 and the Maritime Provinces, $156,500.

The "contemplated new construction" in Canada during March, 1927, according to the same *Review,* totalled $48,818,400, $9,200,600 of this amount being for residential building; $14,592,100 for business building; $4,514,000 for industrial building, and $20,511,700 for engineering construction (including bridges, dams, wharves, sewers, watermains, roads, streets and general engineering).

External Trade

The summary of Canadian trade prepared by the Department of Customs and Excise shows that in February, 1927, the merchandise entered for consumption amounted to $74,706,654, as compared with $70,908,980 in February, 1926. The domestic merchandise exported amounted to $78,533,607 in February, 1927, as compared with $84,094,692 in January, 1927, and with $87,512,147 in February, 1926.

The chief imports in February, 1927, were: iron and its products, $16,215,334, and fibres, textiles and textile products, $15,989,081.

The chief exports in the same month were in the group of agricultural and vegetable products, mainly foods, $25,081,120, and wood, wood products and paper, $19,600,434.

In the eleven months ending February, 1927, exports of agricultural and vegetable products, mainly foods were valued at $471,944,711, and wood, wood products and paper at $256,992,636.

Strikes and Lockouts

The time loss due to industrial disputes in March, 1927, was slightly greater than during February, 1927, but less than during March, 1926. There were in existence during the month ten disputes, involving 520 workpeople, and resulting in a time loss of 7,312 working days, as compared with eleven disputes in February, involving 402 employees, and resulting in a time loss of 7,190 working days. In March, 1926, there were on record fourteen strikes and lockouts, involving 1,032 workpeople, and resulting in a time loss of 14,269 working days. Three of the strikes and lockouts commencing prior to March terminated during the month and one of the strikes recorded as commencing during the month also terminated during March. At the end of the month, therefore, there were on record six strikes and lockouts, affecting 475 workpeople, not including those strikes and lockouts in which employment conditions were reported to be no longer affected, but which had not been formally called off.

Prices

Retail food prices were again somewhat lower, due mainly to declines in the prices of eggs and potatoes. The cost per week of a list of twenty-nine staple foods for an average family of five, in terms of the average retail prices in some sixty cities, was $11.05 at the beginning of March, as compared with $11.23 for February; $11.46 for March, 1926; $10.74 for March, 1925; $10.58 for March, 1924; $10.79 for March, 1923; $10.54 for March, 1922; $13.23 for March, 1921; $16.92 for June, 1920 (the peak); $15.98 for March, 1920; $12.66 for March, 1918; and $7.68 for March, 1914. Besides a substantial fall in the price of eggs and potatoes less important declines occurred in the prices of bacon, lard and butter. Slight increases occurred in the prices of beef, veal, mutton, salt pork, beans and evaporated apples. Including the cost of fuel and rent with that of foods, the total budget averaged $21.29 at the beginning of March, as compared with $21.46 for February; $21.77 for March, 1926; $21 for March, 1925; $21 for March, 1924; $21.42 for March, 1923; $20.96 for March, 1922; $23.87 for March, 1921; $25.01 for March, 1920; $26.92 for July, 1920 (the peak); $20 for March, 1918; and $14.35 for March, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics declined to 148.7 for March, as compared with 150.1 for February. 160.1 for March, 1926; 161.6 for March, 1925; 154.4 for March, 1924; 155.9 for March, 1923; 153.6 for March, 1922; 186.0 for March, 1921; 241.3 for March, 1920; 256.7 for May, 1920 (the peak); and 194.3 for May, 1918. In the classification according to chief component materials five of the eight main groups declined and the other three were practically unchanged. The groups which declined were: the Vegetables and their Products group, higher prices for wheat, western barley, some foreign fruits and rubber being more than offset by declines in the prices of other grains, tea, straw and potatoes; the Animals and their Products group due to lower prices for hogs, mess pork, eggs and tallow, which more than counterbalanced higher prices of cattle, beef, sheep and butter; the Fibres, Textiles and Textile Products group, due to declines in some cotton fabrics and in silk; the Non-Ferrous Metals group due to lower prices for copper and silver, which more than offset increases in the prices of tin, lead and spelter; and the Non-Metallic Minerals and their Products group, due mainly to lower prices of coal, coal oil, gasoline and cement. The Wood, Wood Products and Paper group, the Iron and Its Products group, and the Chemicals and Allied Products group were all practically unchanged.

In the Saskatchewan legislature the Hon. Thomas C. Davis, Provincial Secretary and Minister in charge of the Bureau of Labour and Industries, recently stated that the estimated number of harvesters required to harvest the 1926 crop in the province was 40,000. The number that actually came was 26,132; from British Columbia, 17,700; from Manitoba, 1,698; from the United States, 1,759. A temporary office was opened in Winnipeg for one month. The railway companies were asked to run a fourth series of excursion trains from Eastern Canada. The Department of Immigration was asked to circularize its offices in the United States, with a view to securing men.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT, 1907, DURING THE MONTH OF MARCH, 1927

DURING the month of March the Department received the report of the Board of Conciliation and Investigation established to deal with a dispute between various shipping interests of the Port of St. John, N.B., and certain of their employees, being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Five applications were received for the establishment of Boards of Conciliation and Investigation.

Applications Received

During the month five applications for the establishment of Boards of Conciliation and Investigation were received as follows:—

(1) From certain miners in the employ of the Inverness Railway and Coal Company. Shortly after the application was received Messrs. E. McG. Quirk and J. D. O'Neill, representatives of the Department of Labour, were sent to the locality of the dispute, and, as a result of their mediation, the applicants asked the Minister to hold the application for a Board in abeyance (page 370).

(2) From certain employees of the Canadian National Railways, being clerks, freight handlers, warehousemen, passenger station employees, stores employees, stationary engineers, stationary firemen, classified and unclassified labourers in and around shops and warehouses, etc., as represented by the Canadian Brotherhood of Railroad Employees. The dispute related to the employees' request for improved working conditions, increased wages, and other changes. The number of employees directly affected was given as 15,000. The Minister of Labour established a Board, constituted as follows:—Mr. W. J. Donovan, Winnipeg,, Man., Chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. Peter White, K.C., Toronto, Ont., the employer's nominee, and Mr. H. S. Ross, K.C., Montreal, the employees' nominee.

(3) From certain employees of the Canadian National Telegraphs engaged in commercial telegraph service and being members of the Electrical Communication Workers of Canada, Central District. The dispute arose from an alleged breach of agreement. A day or two after the application was received, the Department was requested to withhold action on the application and it is understood that the dispute has been amicably adjusted by direct negotiations.

(4) From certain employees of the British Columbia Telephone Company being members of Locals 230 (Victoria, B.C.) and 310 (Vancouver, B.C.) of the International Brotherhood of Electrical Workers. The application was received at the close of the month.

(5) From certain employees of the Canadian National Railways being sleeping car conductors, dining car stewards, chefs, cooks, waiters, porters, etc., as represented by the Canadian Brotherhood of Railroad employees. The dispute related to the employees' demand for improved working conditions, increased wages and other changes, and 1,100 employees were stated to be directly affected. By mutual agreement this dispute was brought within the jurisdiction of the Board already established to deal with a dispute between the same company and its clerks, freight handlers, etc., members of the Canadian Brotherhood of Railroad Employees, and of which Mr. W. J. Donovan of Winnipeg is chairman.

Other Proceedings Under the Act

An application was reported in the March LABOUR GAZETTE as having been received during February from certain employees of the Ottawa Sanitary Laundry Co., Ltd., being members of Local 275, International Laundry Workers' Unions. The industry concerned not coming within the direct scope of the Industrial Disputes Investigation Act for adjustment, a Board could be constituted only with the joint consent of the parties to the dispute under Section 63 of the Act. The employing company declined to join with the employees in submitting the dispute to a Board of Conciliation and Investigation and a Board could not be therefore established.

Word was also received during March from the Corporation of the City of Ottawa refusing its consent to the establishment of a Board of Conciliation and Investigation as requested during February by its fire fighters, members of Local 162, International Association of Fire Fighters.

Report of Board in Dispute between Various Shipping Interests of the Port of St. John and their Checkers and Coopers

A report was received on March 16 from the Board established to deal with a dispute betwen various shipping interests of the Port of St. John, N.B., and certain of their employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees. The Board was composed as follows: The Honourable Henry Miles, Montreal, chairman, appointed on the joint recommendation of the other two members of the Board, Mr. J. H. Lauer, Montreal, appointed by the Minister in the absence of a recommendation from the employers, and Mr. J. T. Foster, Montreal, the employees' nominee.

One hundred and twenty-five employees were stated to be directly affected by the dispute, which related to a demand by the employes for increased wages and changed working conditions. The report of the Board was unanimous and contained recommendations for the settlement of the dispute.

Report of Board

In the matter *of the Industrial Disputes Investigation Act, 1907, and re differences between the following Shipping Interests of the Port of St. John: The Anchor Donaldson Line, The Cairn Thompson Line, The Canadian Pacific Steamship Services, the Furness Withy Manchester Line, Head Line, New Zealand Shipping Company, South African Line, Canadian Government Merchant Marine, Intercontinental Line, Scandinavian American Line, Houston Line, Lloyd's Mediterranean Service, Royal Mail Steam Packet, Munson Line, Oriole Line, East Indian Line, H. E. Kane & Co., J. T. Knight, and H. C. Schofield, and certain of their employees being checkers and coopers, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.*

The Hon. Peter Heenan,
Minister of Labour,
Ottawa, Ont.

Sir,—The Board of Conciliation and Investigation appointed by you under date of February 7, 1927, to enquire into the matter as above set forth, and composed of the Hon. Henry Miles, M.L.C., Chairman; Mr. John T. Foster, representing employees, and Mr. J. Herbert Lauer, J.P., representing the employers, begs leave to report as follows:—

The Board held its first meeting on Friday, 11th Feb., at 2.30 p.m., in the Committee Room of the Board of Trade, Montreal, for the preliminary organization and swearing-in of members, and again on Feb. 14, to discuss methods of procedure both at Montreal and St. John, N.B., with subsequent meetings at St. John on Feb. 21 and 22, at Montreal, Feb. 28, at St. John, March 7 and 8, and at Montreal for adoption of report March 12.

The stand taken by the shipping companies from the outset, and even before the appointment of the Board, was that they had received no complaints from their own employees, nor were they aware of any dissatisfaction; that they were able to secure all the help needed under present conditions; that their endeavour was to build up a permanent staff as far as practicable; and finally that, in the event of complaints, they were willing to meet and discuss any trouble with their own individual employees, but refused to meet the employees collectively.

From evidence submitted to the Board, it was established that the general body of employees, through their representatives, had approached the shipping companies by individual letters requesting the negotiation of a wage agreement, as set forth in Exhibit 2 herewith, and that, while the companies had replied courteously, their replies merely reiterated their position as above stated.

Many of the employees concerned work on the Montreal wharf during the season of navigation, at the close of which they are transferred to St. John about the middle of December, thus holding common positions in both ports. The nature of the work does not lend itself to permanence of employment, being obviously regulated by weather conditions and the varying schedules of incoming and outgoing boats.

It further developed during the course of the enquiry that the "permanent staff" which the employing companies claimed to maintain, formed a very small percentage of the workers and practically comprised only office and clerical help.

The claim made by the employers that the work done by the wharf and steamship checkers was not of such a responsible or onerous character as that of the railroad checkers, was not sustained by the evidence, which established that the responsibility and character of the work was practically identical in both classes of workers.

The practice at the Port of St. John with respect to wharf wages appears to be a flat rate for both day and night work. The longshoremen, for instance, work under such an

agreement, recently negotiated, but with the well-established principle that the men composing the night-shift shall be distinct from those who have finished the previous trick, thus affording work to a larger proportion of men. The present flat rate at St. John is 50 cents per hour, most of the companies, however, paying a 10-hour day for 9 hours actual work. In Montreal, the practice of a discriminatory night and day rate prevails both in the case of checkers and longshoremen, the present day rate for the former being 47 cents with a 57 cent night rate.

The Board made every possible effort to induce both parties to meet in joint session and arrive at a mutually satisfactory solution by agreement, but without avail. To this end an adjournment was made at St. John from February 22 to March 7, in the earnest hope that such a conference would eventuate. The "shipping interests" however, while courteously attending all meetings, declined to take any active participation.

Instead of making a categorical award, your Board is of the opinion that the interests of the port will best be served by recommending certain features which should form a reasonable basis for both sides to come to a mutual agreement. These recommendations are as follows:—

1. That the employers shall recognize the right of their employees, irrespective of union affiliations, to appoint their own representatives to approach the employers in the case of complaints or grievances, or matters of discipline or alleged discrimination, on behalf of the employees collectively.

2. That any minor differences existing in the working-hours, meal-hours, assignments to work, pay when not so assigned, double time for Sundays and holidays, can easily be adjusted with good-will on both sides, due to the fact that these general rules are already practically in effect as the current practice in the port.

3. That men awaiting work at the wharf previous to 7 a.m. and 1 p.m. should be given every opportunity for assignment to duties within reasonable time.

4. That, in like manner, opportunity should be given to old employees, i.e. men who have been employed by the companies in previous seasons, to have preference for engagement at the opening of navigation about December 15th each year.

5. That, in view of the fact that the prevailing rate for this classification of work is fifty-six cents per hour, in the case of railway checkers and coopers, the Board is of the unanimous opinion that this rate should apply equally to the steamship employees performing the same class of work at the Port of St. John, effective as and from February first, 1927, the date of appointment of the present Board.

6. That the general working rules and rate of pay herein recommended shall remain in effect subject to thirty days' notice from either party.

7. The Board is of the unanimous opinion that the working-through of the same shift beyond the 10-hour period is not conductive to efficiency in the interests of either the companies or the employees, and should be discouraged and, as far as practicable, discontinued.

The Board devoted an entire morning to personal inspection of waiting accommodation and sanitary conveniences for employees on the various wharves and found the complaints of the men justified, little or no provision being made for the care of the hundred or more men employed. Such conveniences as were in evidence were of the most primitive type and quite unfit for human use. As the wharf buildings are owned partly by the City and partly by the Federal Government, the blame for this state of things cannot attach to the shipping companies. To the knowledge of members of this Board, the same condition existed 10 and 15 years ago, and in spite of recommendations then made no steps have been since taken to remedy this deplorable condition.

The erection of suitable waiting-rooms and other conveniences for the men on each wharf would entail but a small expense in comparison to the tonnage dues received by the port authorities from every ship, and the Board strongly recommends that this condition should receive immediate attention from those in authority.

Your Board begs leave to enclose exhibits marked A, B, and C. which form part of this report.

A certified copy of the summary of the minutes of the Board's proceedings has been furnished to the Minister.

All of which is respectfully submitted.

EXHIBIT A

Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

Submitted on behalf of clerks, checkers and coopers employed by various shipping companies specified in the application for a Board of Conciliation and Investigation dated January 13, 1927.

Mr. Chairman, and Gentlemen of the Board, —The case before the Board arises out of failure of the disputants to mutually agree as to the fairness of certain proposals made on behalf of the employees which were submitted to the employing companies on December 20, 1926. We will in due course file with the Board copies of these proposals, in which are involved questions of working conditions and rates of pay. It is, however, necessary to point out that, while the dispute basically involves these questions, there have not been any conferences between the men affected and their employers, owing to the negative attitude of the companies.

At the time of submitting the proposals to which we have referred the following communication was addressed to all the companies:—

> On behalf of the checkers and coopers employed on St. John and West St. John Wharves, we are enclosing herewith copy of proposed schedule of working conditions and rates of pay to govern the service of these staffs.
>
> Our committee will be pleased to meet your representatives at an early date in order that this matter may be fully discussed and a satisfactory agreement reached.
>
> Will you please let us have an answer within five days?
>
> Yours truly,
> (Sgd.) G. F. Cassidy,
> *Secretary.*
>
> Attest. J. D. Lamont,
> G. G. Seely,
> D. J. Gillespie,
> F. H. Evans,
> *Committee.*"

Several of the companies courteously replied to the above. The replies, however, did not indicate any willingness to comply with the request for a conference. In fact in almost all cases there was a definite refusal to participate in any meeting.

The replies were evidently the result of a definite understanding between the various companies, and stated that no complaints had been received from employees; there was, therefore, nothing to discuss. That there is no justification for this attitude can be very readily demonstrated. The proposals were submitted by employees, and employees asked for the conference, and there must have been something to discuss. The companies were not asked to meet anyone other than actual employees, so there can be no merit to the statement that the attitude of the company was aimed at an organization and not at employees. We believe it to be essential, for the information of your Board, to deal briefly with this phase of the dispute. We feel, indeed, having found it necessary to invoke intervention under the Industrial Disputes Investigation Act, proceedings under which involve expenditure of public monies, it to be incumbent upon us, in the interests of the public and the employees concerned, to deny any responsibility for this necessity. We affirm that there is obligation devolving upon both employers and employees in this and similar disputes, to do all that can be done, in a spirit of good-will, co-operation and sincerity to maintain and promote such amicable relations as are in the interests of all concerned, particularly the public. While we do not presume to dictate the employers policy or responsibilities, we do think your Board should take cognizance of the fact that throughout the entire proceedings leading up to this hearing the employees have been ever ready to co-operate with the companies in efforts looking to a settlement, and to demonstrate their adherence to established procedure in seeking the desired agreement. The attitude of these employers of labour in refusing to thus meet their employees is without precedent in the experience of a good many of us, and entirely indefensible. We have shown the fallacy and fatuity of the argument that the position taken by the companies was dictated by their attitude towards an organization by pointing out that it was the employees and not an organization approached them. One company, the Canadian Pacific, varied the policy to the extent of expressing willingness to meet only the employees of that company, and the employing concerns collectively are averse to meeting their men collectively. There is no consistency in this attitude, and this is readily evidenced when we point out that the Canadian Pacific Railway, together with other railways, does, through their organization, The Railway Association of Canada, deal with employees collectively, notably the shop crafts employees, composed of blacksmiths, boilermakers, machinists, and other classes. May we inquire whether the agreements between these shipping companies and the longshoremen, past and present, have been between the respective companies and their respective employees, or have they been agreements established by joint and collective action such as we are seeking? If the alleged inconsistency is proven, what reason can there be for the attitude of the companies in this case, there being no justification? The only reason is the desire to perpetuate certain arbitrary and unfair conditions to which the employees have been subjected during recent years when they have been unorganized. The action of the men in submitting proposals and asking for a conference was nothing out of the ordinary. The shipping companies have contracts with other classes of employees through their respective organizations, and as a matter of fact several of these companies formerly entered into contracts with this class of employees.

We submit, gentlemen, that the position and tactics together with the evasion of the companies are not conducive to the promotion of the relations which in the interests of everyone are deemed should exist between employer and employees, and, while we expect that your findings will be based on the fundamental merits of the case rather than on what we have so far said, we do think that many of these circumstances to which we have referred will have illustrated to you something of what we have had to meet, and have perhaps enlightened you as to the relations existing between the parties

to this dispute. We shall now proceed to an outlining of some of the discriminatory conditions we are seeking to remedy.

The proposals submitted to the employing companies, in the month of December, 1926, involved questions of both wages and working conditions, outlined in some ten articles composed of twenty-five clauses. Many of these proposed clauses should be regarded as non-controversial, as they have existed in hundreds of schedules on this continent for a number of years. We will now file with the Board a copy of these proposals, and will later present orally, and very briefly, our contentions in regard thereto. Your Board will appreciate the difficulty and the work involved in examining the merits of our requests as to working conditions, but we do consider it to be a relevant factor that some of the rules asked for were previously the subject of agreement between the parties to this dispute, and many of the others, as we have stated, are and have been for years in many agreements between shipping companies, and/or railway companies and their employees. Among the more important of the proposed rules are those dealing with rates of pay for Sunday and holiday work, and other punitive overtime conditions and rates. While it is not the intention to, in this submission, deal exhaustively with the matter as to these proposed overtime rates we desire to make the unqualified statement, as a matter of record, that in no case are we asking in excess of what similar classes of employees elsewhere are being paid. In fact, it can be shown that had our demands been based exclusively on rates of pay at other ports, they would be greatly in excess of what they are. While, as we have stated, it will be our intention to deal orally with many of the features as to conditions it is in in order for us to say that one of the reasons we are not going more thoroughly into them at this time is that although important they are only relatively so. The main issue is the question as to rates of pay, that is, the basic rates. We should, perhaps, here mention that the rates now in effect were arbitrarily established, and have not at any time been agreed to by the men.

In the proposals submitted to the employing companies, rates of pay demanded were as follows:

Checkers and coopers, day work 65c. per hour.

Checkers and coopers, night work 75c. per hour.

It was also contemplated that monthly rated positions would have their rates adjusted accordingly.

The present rate for checkers, as a means of comparison, is 50c. per hour, either day or night. It will be observed that a higher rate is being asked for night than day work. This is because night work is largely overtime, and should be compensated for at a higher rate. Longshoremen at this point are receiving at the present time 65c. per hour, 15c. per hour higher, when the usual differential between these classes is only 5c. per hour. While it may be observed that the longshoremen's rate is uniform over the twenty-four hours it should be pointed out that they work two shifts of men, one day and one night. Some of the companies here pay the checkers at the specified rate ten hours for nine hours work, but this is offset by the fact that where the 50c. rate covers the twenty-four hours, at Montreal there is a night rate of 10c. per hour over the day rate. It will appear from the figures quoted, that we are asking increases of 15c. and 25c. per hour, but we prefer as far as the major part of the difference is concerned to refer to it not as an increase but as an adjustment. We believe we can show justification for this attitude.

We are prepared to prove that from no point of view are the rates now in effect, having been arbitrarily established by the companies, either fair, just, or warranted, and that on a proper basis of comparison our wages are lower than those paid elsewhere for work performed of a similar character. We are, in fact, prepared to prove that similar classes of employees at Northern Atlantic Ports, performing services identical with those performed by the men involved in this dispute, are paid rates very much higher even than those we are now asking. In spite of the limited facilities at our disposal we have gathered together some reliable information which should prove conclusively that on a basis of fair comparison the men here represented are not being paid either a fair or adequate wage.

The rate of pay of steamship checkers at other ports in the North Atlantic District, among which are New York, Boston, Portland, Philadelphia and Newport News at 75c. per hour, with an overtime rate of time and one-half after eight hours. They are, moreover, guaranteed a minimum of four hours pay once they have started work, and a full day's pay when they have completed the fifth hour of duty. This guarantee condition is one which has become well established, and is regarded as necessary, having in view the uncertainty of the amount of available work, due to ocean and other conditions not met with in other branches of employment. Analyzed, it is apparent that these checkers are receiving a much lower income for service rendered during ten hours per day, than do the same classes of employees at other points who work only eight hours per day. There are many other relevant factors to which you could properly give consideration, not the least important one being the fact that many of the men for whom we are speaking, during some parts of the season here, worked very irregularly, some losing a large amount of time. Regularity of employment is recognized as being a prime consideration in a question such as that before your Board. For instance, on page fifteen of the report of the Provincial Royal Commission on coal mining industry in Nova Scotia, issued as a supplement to the Labour Gazette for January, 1926, will be found the following: "The greatest need at the moment is regularity of employment, for upon that, whatever the wage rates may be—depends the earnings of the men."

Perhaps the most relevant point, and one upon which we feel we could safely leave the decision of this Board upon, alone, is the feature as to the relation between rates paid to similar classes of employees, on the railroads, at St. John, and the rates which are paid the steamship checkers. At one time there was a close relation between these rates, and in fact very little difference existed. To-day the reverse is the case, all relation in this regard having been destroyed, with no justification,

and we are now faced with the condition of having to work side by side with railway checkers who are being paid a higher rate than our own. Rates on the railways at St. John are 56c. per hour for checkers, 6c. higher than our rate, and we are now informed that the railwaymen will very probably receive an increase in the immediate future, a recent decision of a Board of Conciliation having so recommended. Canadian National steamship checkers are receiving 56c. per hour.

It is our desire to make clear our attitude in this particular connection, which is that while we do not believe the railway checkers' rates to be high enough, or commensurate with their requirements, we do not see why we should receive a rate lower than theirs. Their work and ours is identical in every respect, and we would suggest to your Board that you visit the freight sheds on the wharf here to verify our statement in this connection. We should at least receive a higher rate than men who are employed by the railways the year round, but we do not. What we regard as being particularly objectionable is the fact that railway truckers here are receiving the same basic rate as ourselves, while there is usually a differential of about six cents in favour of checkers over truckers' rates. This, we submit, is a condition which should be rectified by increasing our rates.

It seems to have been customary, in arguing a case such as our own, to submit, as supplementary to other contentions, budgets and statements dealing with the cost of living tending to show the inadequacy of the wages being paid. We shall depart from this practice. Rightly or wrongly we are of the opinion that the submitting of any theoretical budgets would only serve to becloud the issue. We could, of course, bring budgets purporting to show how impossible it is for a family to live decently on an income of 50 cents per hour. We could also bring in budgets purporting to show the difficulty of a family to live decently on twice that amount, and still be within unchallengeable reason. The essence of the matter is that we realize the impracticability of establishing at this time what we might term "adequate" wages. The most we hope for is a wage which is recognized as now being the standard in this particular industry. In short, we contend we are entitled to wages being paid to others performing the same work. In this connection might we point out that our opinion as to the soundness of our position in this respect is concurred in by no less an authoritative body than the Dominion Parliament. On March 18, 1926, the House adopted a resolution, moved by A. W. Neill, Independent, Comox-Alberni, that every effort should be made to affirm the full industrial freedom of the citizens of Canada to bargain for their freedom on all industrial contracts: that the exploitation of labour should be prevented and condemned; that no person should be compelled to work for wages less than the standard; that in all cases such wages as are generally accepted as current in each trade for competent workmen in the district where the work is carried out, should be enforced and paid. The Premier stated at the time that Parliament would be doing a national service in endorsing the opinions that this resolution expressed.

This resolution must have been made for the condition before your Board to-day. In effect, our right to bargain for a contract has been denied through the negative attitude and evasive tactics of the employing companies. We are working wages less than the standard, and we are seeking the enforcement of payment of wages which are recognized as standard in our industry. We look to your Board for relief, and we hope that in the opinion you express we shall have encouragement in our fight for fair play and justice.

This dispute is not a new one. Three years ago, under similar circumstances, we appeared before a Board at Montreal with a situation such as that existing here. The unanimous report of the Board was in our favour. Unfortunately, while the report recommended an increase, no amount was specified, thus leaving a loop-hole for evasion. A copy of that report we are filing with your Board. The dispute is essentially the same to-day as on this former occasion. We are still being exploited. We are still being paid at less than the standard. We are still denied a contract.

Should we in this brief, or in our oral presentation, have failed to make clear to the Board any feature or matter pertinent to the dispute, we trust that we shall be asked and given the opportunity to make it clear, feeling, as we do, that thorough investigation will result in vindication of the position we have taken in the matter now before you.

Submitted on behalf of the employees, by the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.

(Sgd.) F. H. Hall,
Vice President.

February 22, 1927.

EXHIBIT B

Memorandum of Agreement Between The Anchor Donaldson Line Ltd.; the Cairn Thompson Line; The Canadian Pacific Steamship Services; Furnace Withy, Manchester Line; Head Line; New Zealand Shipping Company; South African Line; Canadian Government Merchant Marine; Intercontinental Line; Scandinavian American Line; Houston Line; Lloyd's Mediterranean Service; Royal Mail Steam Packet; Munson Line; Oriole Line; East Indian Line; H. E. Kane & Co., and The Steamship Checkers Local No. 1237, being members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, covering checkers, coopers, and clerical staffs specified in the agreement and employed on St. John and West St. John Wharves.

Article 1.

Working hours shall be as follows: from 7 o'clock A.M. 'till 12 o'clock noon and from 1 o'clock P.M. 'till 6 o'clock P.M. day work; and from 7 o'clock P.M. 'till 12 o'clock midnight and from 1 o'clock A.M. 'till 6 o'clock A.M. night work.

Article 2.

All work performed on Sundays and the following specified holidays, namely: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day (provided that when any of the holidays above specified fall on Sunday, the day desig-

nated or observed by the Dominion Government shall be considered the holiday) shall be paid for at the rate of double time.

Men required to report for work on Sundays or holidays and who from any cause are prevented from performing duties shall be paid a minimum of five hours at the prevailing rate.

Men assigned to work on any day shall be paid for not less than the five-hour period at the prevailing rate.

Employees who are compelled to work during any meal hour shall be paid therefor at the rate of double time the prevailing rate and at the same rate for each succeeding hour till relieved.

Night meals to be taken between 12 o'clock midnight and 1 o'clock A.M., the employing company to supply good meals or pay cost thereof.

Any checker put temporarily in charge (floorman) of two or more checkers shall receive ten cents per hour more than checker's rate.

No existing rates or present classifications of position or duties shall be changed except as may be mutually agreed between the parties to this schedule.

Rates of pay for weekly or monthly rated positions shall be computed on the basis of checkers' hourly rates, for ten hours per day and the number of working days in the week or month.

Weekly or monthly rated employees shall be paid overtime at the prevailing rate for checkers for all work performed outside regular hours.

Article 3.

Men required to start work shall be definitely assigned to their duties not later than 7.30 a.m. or 1.30 p.m.

Article 4.

Men who have worked at this point during previous seasons shall be regarded as permanent employees and shall be returned to the service before any others are engaged at the commencement of the season, provided they report physically fit for duty on the opening of navigation but not later than December 15th.

No additional positions shall be created, nor new men employed, until all regular men are working steadily.

Article 5.

Except in the case of heavy freight requiring the services of more than one gang, or emergency doubling up, checkers shall not be required to handle more than a single gang.

The practice of railway checkers being required to perform steamship checking, where it has obtained, shall be discontinued.

Article 6.

The right of the employees to select their own representative or representatives to meet the employers in matters affecting the application of this agreement, or proposed changes thereto, is hereby established.

Article 7.

Waiting accommodation and sanitary conveniences shall be furnished for the employees.

Article 8.

An employee disciplined or who considers himself unjustly treated shall have fair and impartial hearing, provided written request is presented to his immediate superior within five days of date of receipt of discipline and hearing shall be granted within five days thereafter. A decision shall be rendered within seven days after the completion of the hearing. If an appeal is taken, it must be filed with the next higher official and copy furnished the official whose decision is appealed within five days after date of decision. The hearing and decision on the appeal shall be governed by the time limit of preceding section. At the hearing or on the appeal the employee may be assisted by a committee of employees or by any one or more duly accredited representatives. The right of appeal by employees or representatives in the regular order of succession and in the manner prescribed up to and inclusive of the highest official designated to whom appeal may be made is hereby established. An employee, on request, will be given a letter stating cause of discipline. Transcript of evidence taken at investigation or on the appeal shall be furnished on request to the employee or his representative.

If the final decision decrees that the charges against the employee were not sustained, the records shall be cleared of the charges; if suspended or dismissed, the employee shall be returned to his position and paid for all time lost.

No employee shall be held out of service for more than two days if work is available without being furnished a reason therefor in writing.

Article 9.

The articles and rates of pay embodied in this schedule shall remain in effect, subject to thirty days' notice from either party.

Article 10.

Rates of pay shall be established as follows, effective from December 1st, 1926:

Coopers and checkers—Day work, 65 cents per hour.

Checkers and coopers—Night work, 75 cents per hour.

The following rates shall apply for the weekly and monthly rated positions as specified:—

Accepted

For the Employees.

For the Shipping Companies.

EXHIBIT "C"

MONTREAL, June 1, 1923.

The Hon. JAMES MURDOCK, M.P.,
Minister of Labour,
Ottawa, Ont.

REPORT *of the Board of Conciliation named in virtue of the Industrial Disputes Investigation Act, for the purpose of inquiring into differences between the Shipping Federation of Canada and the Canadian Pacific Steamships Ltd.; and certain workmen being checkers and coopers members of Lodge No. 927, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees.*

SIR,—The members of the Board appointed by you, under date of May 22nd, 1923, to inquire into the above dispute and composed of Messrs. E. McG. Quirk, Chairman; Bernard

Rose, employers' representative, named by the Minister; J. G. O'Donoghue, K.C., employees' representative, have the honour to report.

The Board made every possible effort to get the parties to meet, and effect an adjustment. Notwithstanding such efforts and as result of the contentions of the employers, they were regretfully compelled to make an award without the parties to the dispute reaching a settlement that was mutually satisfactory.

In brief, the position of the employers is, that, owing to conditions now prevailing, and the low rates paid for freight and business being carried on at a loss during the past two seasons, they cannot afford to pay more than they are presently paying.

The Board finds itself in a quandry, owing to one very important fact, and that is: during the course of their investigation, they ascertained that checkers employed on the wharves by the railroads, are paid a rate even higher than that which the applicants for the Board demand from the shipping interests.

We are unanimously of the opinion, without going into the merits of the matter any further, that the employees are entitled to consideration in the matter of an increase.

The Board held sessions on May 28, 29, 30 and 31, and also on June 1st.

The whole respectfully submitted.

(signed) E. McG. Quirk.
J. G. O'Donoghue.
Bernard Rose.

Montreal, June 1, 1923.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

SIX new decisions of the Canadian Railway Board of Adjustment No. 1 have been received by the Department. This Board was established under an Order in Council, dated July 11, 1918, while the war was still in progress, its purpose being to secure uninterrupted service on the railways. The Board consists of six representatives of the railway companies and six representatives of labour, one for each of the railway brotherhoods. Earlier cases were outlined in the Labour Gazette for November, 1926, and in previous issues. The six new decisions are as follows:—

Case No. 283—Canadian National Railways (Atlantic Region) and Brotherhood of Maintenance of Way Employees.

A labourer in the Bridge and Building Department was laid off at intervals during 1926 when the working forces were being reduced, losing in all 40 days during the season. He claimed pay for the lost time on the ground that he should not have been laid off while employees junior to him were retained in service. The company contended that this man was employed only as a gang labourer and as such was not accumulating seniority while employed, such seniority only belonging to a permanent labourer. During the hearing it was found that the employee in question was formerly a pumpman whose position had been abolished, with the result that he was obliged to take temporary work. The Board denied the claim of the employees as to the seniority rights of the applicant as a temporary employee, but they directed that his name should be restored to the pumpmen's seniority list.

Case No. 284—Canadian National Railways (Atlantic Region) and Brotherhood of Maintenance of Way Employees.

A bridge and building foreman was absent from duty for seven months and on resuming work was allowed by the company to resume his former seniority. His time off-duty had been spent in the construction of a section of railway for a manufacturing company, the railway company giving him leave of absence for this purpose. The employees contended that by leaving the service of the railway this employee forfeited his seniority under the wage agreement, which provides that "employees leaving the service of the railway when their services are required, shall, in the event of re-employment, rank as new men." The Board denied the claim of the employees.

Case No. 286—Canadian Pacific Railway Company (western lines) and the Order of Railway Conductors and Brotherhood of Railroad Trainmen.

A difference of opinion arose between the company and its employees as to the application of the provision in the wage schedule (Article 7, clause (e)) that "permanent vacancies or new runs created will be bulletined for ten days and given to the senior qualified man applying therefor." The question arose under the following circumstances. During normal operation periods of the mines two train crews are employed at Frank (Crow's Nest Subdivision) to provide switching service. On March 31, 1922, a general strike of coal miners became effective throughout this field, causing a cessation of operation in Frank Mines. The two train crews engaged in this work were withdrawn and their assignment cancelled.

On August 23, 1922, a tentative settlement, which was confirmed on August 26, was reached between the mine operators and their employees, and switching service was resumed in this territory August 27, 1922. The company issued a bulletin to its conductors and trainmen on August 23, in accordance with Article 7, clause (e), calling for two crews to fill this assignment. As it was necessary to supply the service at once, without waiting for expiration of the ten day period stipulated in Article 7, clause (e), in the interim—August 27 to September 2—two junior unassigned crews were placed in this service temporarily while applications for the assignments were being received. The contention of the employees was that such assignments must be bulletined for ten days before becoming effective, while the company contended that upon an assignment being bulletined the conditions of assigned service were applicable to it. The Board in its decision, declared it would make no general interpretation that would meet all conditions which might arise, and that it should only be called upon to deal with specific cases. In the present case the Board suggested that both parties might agree that the time required for bulletining should be reduced from ten to five days, as this change would materially reduce the grievances arising under the rule in question.

Case No. 287—Canadian National Railways (central region) and the Brotherhood of Railroad Trainmen.

A dispute arose between the company and the employees as to the manning of trains in which gasoline motor cars are used. Article 4, clause (g) of the Schedule for conductors, baggagemen and brakemen on the former Canadian Northern lines east of Port Arthur is as follows:—

Passenger trains will have at least one train baggageman and one brakeman. Passenger trains of eight cars or more will have two brakemen and one baggageman, if there is a local baggage car on the train; one or two box baggage or refrigerator cars to count as one car, and three or four as two cars. Where gasoline motor car is used, only one brakeman will be required.

It appeared at the hearing that under a mutual arrangement motor car trains are operated without any brakemen. The employees asked that when one or more trailers are added to such trains a brakeman should be added to the train crew. The company refused to comply with this request. The Board decided that in the absence of any agreement to the contrary the article above quoted, requiring that there should be one brakeman in a motor car train crew, should be adhered to.

Case No. 288—Canadian National Railways (western region) and Order of Railroad Telegraphers.

A controversy arose as to the practice of the company in calling assistant agents to meet passenger trains on Sunday instead of agents. The telegraphers' schedule provides that telegraphers shall be assigned one regular day off in seven, Sunday being the day off for the agents at the point where the question rose. A regular swing telegrapher had not been appointed to relieve the agents on Sunday, the company calling assistant agents for this duty. The telegraphers claimed that the agents were entitled to be paid for each Sunday the assistant agents had been so employed.

The Board sustained the claim of the employees to the extent that the agent should be allowed to perform the Sunday service when it is required, seeing that a punitive overtime rate is paid for such service. As reasonable doubt on the question existed however, the Board did not sustain the claim of the employees for back pay.

Case No. 289—Canadian Pacific Railway Company (western lines) and Order of Railroad Telegraphers.

Automatic signals were installed between two points on the railway with a desk controller in charge of the operators. The employees claimed that the operators' salaries should be increased to $150 per month from the date of installation of electrically operated switches and semaphores. The company refused the demand on the ground that there was no provision in the schedule to justify extra compensation. They claimed that the new apparatus placed no additional responsibility on the operators, and entailed no hardship, exertion, or exposure. The employees, on the other hand stated that the new installation entailed much additional work and responsibility on the operators, giving an example of the work involved in the handling of one train by the new method.

The Board found that there was no provision in the schedule for adjustments of salaries following changed conditions or responsibilities. The adjustment of any established rate of pay because of such changes was a matter for negotiation between the company and its employees.

Labour Courts in Germany

By the promulgation of the Labour Courts Act of December 23, 1926, which comes into force on July 1, 1927, jurisdiction in labour matters in Germany has been reorganized and placed on a uniform basis. Hitherto the labour tribunals have been the Trade Courts, the Merchants' Courts, the Guild Arbitration Tribunals and the Labour Chambers of the Conciliation Boards.

The Trade Courts consisted of the municipal trade courts and the State trade courts in the Rhineland. The last named are purely autonomous bodies, entirely unconnected with the Department of Justice. The Trade and Merchants' Courts outside the Rhineland are municipal institutions, and they also have no connection with the Department of Justice. The Guild Arbitration Tribunals are internal institutions of the various craft guilds. The presidents must not be ordinary judges and need not possess qualification for judicial office. They were appointed by the communal administration and the economic interests concerned.

All these tribunals will be replaced by the new Labour Courts, which are not to be under the State or municipal administration, but under the State Department of Justice.

According to a declaration by Mr. Sitzler, Ministerial Director, 800 tribunals are being created, for which an expenditure of 2,000,000 marks will be required.

The labour tribunals: are (1) The labour courts, (2) the state labour courts, and (3) the federal labour court. The labour courts have jurisdiction, to the exclusion of the ordinary courts and irrespective of the amount in dispute, in all civil disputes between the parties to collective agreements, or between parties capable of entering into collective agreements, or as to the existence or non-existence of a collective agreement; also in disputes between employers and employed arising out of employment or apprenticeship, as to the existence or non-existence of a contract of employment or apprenticeship, or arising out of unlawful actions connected with employment or apprenticeship. The labour tribunals consist of qualified judges and assessors chosen from employers and employed persons. Disputes are settled by way of judgment or decision. The labour courts have jurisdiction in the first instance. Appeal from their decisions lies in the state labour court where the amount in dispute exceeds 300 marks. In special cases, appeal may be made from a judgment of the state labour court to the federal labour court.

A question which gave rise to considerable controversy was that of representation and the admission of advocates. Advocates or persons conducting legal proceedings by way of profession are excluded from the labour courts. Members or employees of economic organizations of employers or employed persons are nevertheless admitted. In the state labour courts and the federal labour court, however, parties must be represented by advocates. In the state labour courts, members or employees of economic organizations of employers or employed persons may be heard in lieu of advocates.

In proceedings in the labour court, a single fee in accordance with the amount in dispute is payable, which in a dispute involving not more than 20 marks is one mark. The amount rises up to a maximum of 500 marks. All other fees are in accordance with the Legal Costs Act and are payable at the conclusion of the proceedings.

Each chamber of the labour court consists of one president and one employers' and one employed persons' assessor. The number of chambers is to be determined by the State Department of Justice. Special chambers must be created for disputes in connection with handicrafts. The president is appointed by the State Department of Justice and must possess knowledge and experience in matters of labour and social legislation. He is generally an ordinary judge, preference being given to those who have been presidents of conciliation boards and similar bodies. The assessors, who may consist of both men and women, are appointed by the higher administrative authorities, on the proposal of the economic associations of employers and employed persons within the jurisdiction of the court, for a period of three years. The office of assessor is an honorary one.

The state labour courts are constituted in connection with the state courts by the State Department of Justice in agreement with the supreme state authority for social administration, after hearing the economic associations of employers and employed persons. The chambers are similar in composition and constitution to those of the labour court.

The federal labour court is constituted in connection with the federal court, and consists of the requisite number of presiding judges of the federal court as presidents, and of judges of the federal court as substitute presidents, the requisite number of judges of the federal court as judicial assessors and the requisite number of non-judicial assessors, the latter being chosen in equal numbers from employers and employed.

STRIKES AND LOCKOUTS IN CANADA DURING MARCH, 1927

THE number of strikes and lockouts in existence during March was ten, as compared with eleven during the preceding month. The time loss for the month was less than during March, 1926, being 7,312 working days as compared with 14,269 working days during the same month last year.

Date	Number of disputes	Number of employees involved	Time loss in working days
Mar., 1927	10	520	7,312
Feb., 1927	11	402	7,190
Mar., 1926	14	1,032	14,269

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees at its commencement and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days' or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review.

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Eight disputes, involving 163 workpeople, were carried over from February, and two disputes commenced during March. The strike of fur workers at Winnipeg, beginning on September 25, 1926, was not called off, but during February those employees who had not returned to work secured work elsewhere, so that employment conditions were no longer affected. Three of the strikes and lockouts commencing prior to March terminated during the month, and one of the strikes and lockouts commencing during March also terminated during the month. At the end of the month, therefore, there were on record six strikes and lockouts, as follows: Ladies' clothing factory workers, Toronto, Ont.; men's clothing factory workers, Montreal, P.Q.; cap makers, Toronto, Ont.; men's clothing factory workers, St. Hyacinthe, P.Q.; electrotypers, Toronto, Ont.; and coal miners, Inverness, N.S.

The record does not include minor disputes such as described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, although the unions or organizations concerned have not yet declared them terminated. Information is available as to four such disputes, namely: metal polishers at Sackville, N.B.; March 15, 1921; moulders at Galt, Ont., August 2, 1922; cigarmakers at Montreal, P.Q., March 24, 1925, and fur workers at Winnipeg, Man., Sept. 25, 1926.

One of the strikes which commenced during March was for an increase in wages, while the other was against a reduction in wages and for a closed shop. Of the four strikes which terminated during the month, three were in favour of the employer and one resulted in a compromise.

The following paragraphs give particulars in regard to certain disputes, in addition to information given in the tabular statement.

Men's Clothing Factory Workers, Montreal, P.Q.—In this dispute, which commenced July 28, 1926, to secure union wages and working conditions in non-union establishments, with the result that nearly all the employers involved signed agreements with the union during the summer and autumn, it is reported that there are now only two establishments affected and that these have to a great extent replaced the strikers, but that there are still thirty employees on strike.

Men's Clothing Factory Workers, St. Hyacinthe, P.Q.—In this dispute, which commenced March 19, 1926, in Montreal, the establishment being moved to St. Hyacinthe where a number ceased work on February 7, 1927, the employer replacing some of the strikers, at the end of March there were still involved eighty strikers, a number having returned to work or secured employment elsewhere.

Upholsterers, Kitchener, Ont.—This dispute, which commenced in February against a reduction in piece rates, the employer replacing the strikers, lapsed toward the end of March, when the last of the strikers secured employment elsewhere.

Electrotypers, Toronto, Ont.—This dispute, commencing in December against the discharge of employees for union activity when the employer refused to renew the agreement with the union, continued through March. During the month it was reported that one of the strikers had returned to work.

Structural Steel Workers, Calgary, Alberta.—This dispute, which commenced during January, was against the employment of non-union workmen who were brought from outside localities. By March 14, the employer having replaced the strikers, the dispute lapsed.

Laundry Workers, Ottawa, Ont.—In this dispute, which commenced on February 14, against changes in working conditions announced by the employer when the union had refused to consent to changes in the existing agreement, some sixty employees ceased work alleging a lockout. The employer secured other workers, and to some extent the former employees returned, so that by March 5 the dispute was considered terminated, although fifteen of those involved had not yet secured any employment or been taken back.

Painters, Decorators and Paperhangers, Kingston, Ont.—This dispute, involving a cessation of work on March 1 because of a proposal for an increase in wages from 70 cents per hour to 80 cents, was terminated on March 9, the contractors agreeing to pay 75 cents per hour until March 1, 1928, when the rate would be raised to 80 cents per hour. It has been reported that some of the employers had replaced the strikers and did not agree to the increase. The hours of labour were reduced from forty-eight to forty-four per week a year ago.

STRIKES AND LOCKOUTS DURING MARCH, 1927

Industry, occupation and locality	Number of employees involved	Time loss in working days	Remarks
(a) Strikes and lockouts commencing prior to March, 1927,			
Manufacturing—			
Clothing (including knitted goods)—			
*Ladies' clothing factory workers, Toronto, Ont.	4	108	Alleged lockout, commenced June 30, 1926, against enforcement of non-union conditions. Unterminated.
Men's clothing factory workers, Montreal, P.Q.	30	810	Commenced July 28, 1926, for union wages and working conditions in non-union ships. Unterminated.
Cap makers, Toronto, Ont....	5	135	Commenced August 27, 1926, for employment of union members only. Unterminated.
Men's clothing factory workers, St. Hyacinthe, P.Q.	80	2,160	Work ceased Feb. 7, 1927, for higher wages, shorter hours and recognition of union. Dispute in progress since Mar. 19, 1926. Unterminated.
Wood Products—			
Upholsterers (furniture)..... Kitchener, Ont.	3	40	Commenced Feb. 4, 1927, against reduction in piece rates. Lapsed Mar. 21, 1927.
Printing and Publishing—			
Electrotypers, Toronto, Ont.	6	162	Commenced Dec. 20, 1926, against discharge of employees for union activity. Unterminated.
Construction—			
Highway and Bridge Construction—			
Structural steel workers, Calgary, Alberta.	5	37	Commenced Jan. 19, 1927, for employment of union members only. Terminated (replacement of strikers), Mar. 14, 1927.
Service—			
Personal—			
Laundry workers, Ottawa, Ont.	30	150	Commenced Feb. 14, 1927, against changes in working conditions. By Mar. 5 strikers replaced or returned to work.
(b) Strikes and lockouts commencing during March, 1927.			
Mining, Non-Ferrous Smelting and Quarrying—			
Coal miners, Inverness, N.S.....	350	3,500	Commenced Mar. 21, 1927, against reduction in wages and for closed shop. Unterminated.
Construction—			
Buildings and Structures—			
Painters and paperhangers, Kingston, Ont.	7	210	Commenced Mar. 1, 1927, for increase in wages. Terminated Mar. 9, partial increase.

*Reports indicate that the strikers have been replaced, but there are still a number of employees out and on the strike benefit list of the union.

COAL MINERS, INVERNESS, N.S.—A cessation of work occurred on March 21 when 350 out of over 500 miners were not at work. The management had proposed a reduction in wages on the ground that the mine, in the hands of receivers for some years, was still being operated at a loss. The representatives of the United Mine Workers of America, to which union it was said about one-half of the miners belonged, negotiated an agreement providing for a decrease, but also stipulated that none but members of their union should be employed. The management refused this, and posted the new schedule of wages. Employees who were not members of the United Mine Workers of America, some of whom were reported to be members of another organization, applied for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act, 1907. The Minister of Labour sent representatives of the Department to Inverness to bring together the parties to the dispute. The employees who were members of the United Mine Workers of America did not report for work, and picketed the mine. The management placed the mine on a maintenance basis pending a settlement. The employees who had applied for a Board requested the Minister of Labour to hold their application in abeyance pending the result of further negotiations (page 358).

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is here given from month to month, bringing down to date that given in the LABOUR GAZETTE for February, 1927, in an addendum to the review of strikes and lockouts in Canada during 1926. The latter included a table summarizing principal statistics as to strikes and lockouts since 1918 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, so that for such countries the latest figures are not for relatively recent dates.

Great Britain and Northern Ireland

Preliminary figures for Great Britain and Northern Ireland in 1926 have been published in the *Ministry of Labour Gazette*. The number of disputes beginning in the year was 313, involving 2,721,000 workpeople directly and 9,000 indirectly. There were also 26 disputes involving 18,000 workpeople which began before 1926, and continued into that year. The total number of disputes in progress during the year was 339, involving 2,748,000 workpeople and causing a time loss of 162,784,000 working days. Although the number of disputes was the smallest on record, the time loss was greater than in any previous year. This was due to the dispute in the coal mining industry which began in May and was not terminated in some districts until December, and also to the general strike in sympathy with it in May.

In the accompanying table, all disputes are classified according to the industrial groups in which they occurred.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND NORTHERN IRELAND DURING 1926.

Groups of Industries	Number of Disputes beginning in 1926	Number of Workpeople involved in all Disputes in progress	Aggregate duration in Working Days of all Disputes in progress
General Strike	1	1,580,000	15,000,000
Coal Mining	58	1,098,400	146,992,000
Other Mining and Quarrying	6	500	22,000
Brick, Pottery, Glass, etc.	5	2,600	43,000
Chemical	3	300	10,000
Engineering	15	3,400	64,000
Shipbuilding	7	800	4,000
Other Metal	37	9,800	129,000
Textile	33	16,600	195,000
Clothing	12	1,000	8,000
Food, Drink and Tobacco	18	1,700	7,000
Woodworking and Furnishing	12	1,500	29,000
Paper, Printing, etc.	4	1,400	42,000
Building, Decorating, Contracting, etc.	41	3,400	34,000
Transport	41	23,300	169,000
Other Industries and Services	20	2,800	36,000
Total	313	2,747,500	162,784,000

During February, 1927, 15 new disputes were reported, involving directly and indirectly 2,100 workpeople, while 13 disputes, involving 3,600 workpeople which began before the beginning of the month, were still in progress. The total number of disputes in progress during the month was 28, involving 5,700 workpeople and resulting in a time loss of 65,000 working days.

The two principal disputes of the month were in the coal mining industry. One, involving 1,705 workpeople against local reduction in wages offered at the termination of the national stoppage on December 1, had not yet been settled at the end of February, and the other, involving 1,500 miners, which began in January over a revision of wages, was amicably settled during February.

Of the 15 disputes beginning in February, 7 were caused by questions as to wages, 4 by questions of employment of particular classes or persons and 4 by other causes. Of the 13 disputes settled during the month, 4 were settled in favour of employees, 4 in favour of employers, 5 by compromise and in 3 cases work was resumed pending negotiations.

United States

Preliminary figures for January, 1927, show the number of disputes beginning in that month as 46 as compared with 33 (revised figure) in the previous month. The number of employees involved is reported for only 35 of these disputes, and is 5,198, making the average number of employees per dispute, 149. Of the 46 disputes, 9 were in building trades, 8 in coal mining, 6 in the clothing industry, 5 in the textile industry and the remaining in various other industries.

The strike of textile workers at Passaic, New Jersey, which had been in progress for over a year, was called off when settlements were reached with the other employers, who agreed to re-employ the workers as rapidly as possible without discrimination against union members.

Two other important disputes were settled in January. The strike of paper-box makers in New York City for the 44-hour week and increase in wages was abandoned. A strike of carpenters in San Francisco, California, involving at one time 1,000 carpenters, which began April 1, 1926 for a closed shop was called off and no change made in conditions prevailing before the strike.

Belgium

During the year 1926, 140 disputes were terminated. These involved 82,266 workpeople directly and indirectly. Of these disputes, 137 involving 69,912 workpeople directly and 4,898 indirectly, were strikes, and 3, involving 7,456 workpeople directly were lockouts. There were 936 establishments concerned in the disputes. In the accompanying table, strikes and lockouts are classified by groups of industries:

STRIKES AND LOCKOUTS IN BELGIUM DURING 1926

Industries	Number terminating	Number of Establishments	Number of Workpeople affected	
			Directly	Indirectly
Strikes—				
Textiles	28	39	11,590	1,391
Woodworking and Furnishing	19	156	2,870	75
Metals	18	53	20,868	193
Construction	14	103	1,457	99
Hides and leather	12	22	1,583	198
Quarrying	8	29	5,383	2
Chemicals	8	48	2,245	3
Ceramics	7	7	3,463	1,063
Clothing	6	15	368	61
Mining	5	8	6,770	210
Transportation	5	7	12,842	1,233
Food	3	3	68	
Glass	2	2	167	370
Paper	2	2	238	.....
Lockouts—				
Woodworking and Furnishing	2	42	1,256	.....
Drafting, etc.	1	400	6,200	.....

Of the 140 disputes, 97 were caused by questions of wages, 16 against discharge of employees, 12 about working conditions, 6 against the application of fines, 5 over union questions and the remaining 4 for miscellaneous causes.

In the case of 42 disputes, the result was in favour of the workpeople, 52 were in favour of employees and 46 ended in a compromise.

Finland

During January, 1927, 3 new disputes involving 205 workpeople were reported. There were 3 disputes in progress at the beginning of the month, which makes a total of 6 disputes in progress during the month involving 552 workpeople.

France

The numbers of disputes reported for the months of July, August and September, 1926, are as follows:

	July	Aug.	Sept.
Number of disputes	167	147	122
Number of workpeople involved	28,085	27,559	19,998

The greater number of these disputes were as to wages, 152 in July, 122 in August and 101 in September.

The results of the disputes are as follows:

Result	July	Aug.	Sept.
In favour of employers	55	59	41
In favour of employees	32	24	17
Compromise	65	39	43
Unknown or not terminated	15	25	21
Total	167	147	122

Germany

In Germany, as in Belgium, strikes and lockouts are recorded by the number terminating, not the number in existence. During the 4th quarter of 1926, 52 strikes and 9 lockouts were terminated. The strikes involved 808 establishments and 24,187 workpeople directly and 3,099 indirectly, causing a time loss of 143,743 working days. The lockouts involved 380 establishments and 23,455 workpeople with a time loss of 171,036 working days. Of the 61 disputes, 18 ended in favour of workpeople, 28 were compromised and 15 were in favour of employers.

Latvia

During the year 1925, disputes took place in 53 establishments involving 3,224 workpeople and causing a time loss of 24,552 working days.

In the year 1926, there were disputes in 53 establishments, involving 5,065 workpeople and the time loss was 68,493 working days.

Netherlands

Preliminary figures for the year 1926 show a total of 199 disputes beginning in the year. These involved 8,700 workpeople and 570 establishments. Of the number of disputes 55.5 per cent were caused by questions of wages.

In the month of December, 1926, 11 strikes began, 9 of which involved 180 work people. There were no lockouts.

Australia

In the 3rd quarter of 1926, there were 80 disputes in 85 establishments. The total number of workpeople involved was 21,773, of which 18,069 were directly and 3,704 indirectly. The time loss was 156,347 working days and the estimated loss in wages £155,317.

New Zealand

The following table is a summary of industrial disputes in New Zealand for the year 1926:

Industry	Number of Disturbances	Number of Firms involved	Number of Workers affected	Total Duration (days)	Average Duration (days)	Approximate Loss in Wages
						£
Meat-freezing	11	17	1,451	147	13·36	12,143
Coal-mining	25	25	4,159	117	4·68	17,647
Shipping and cargo-working	20	22	575	46	2·30	2,527
Shearing	1	1	7	2	2·00	14
Miscellaneous	2	2	72	2	1·00	24
Totals	59	67	6,264	314	5·32	32,355

Progress in Prince Edward Island in 1926

The speech from the Throne at the recent opening of the fourth session of the 40th general assembly of Prince Edward Island noted a marked industrial and economic improvement during the past year. Special attention was called to the development of agricultural co-operation. "The co-operative marketing of agricultural products was more firmly established than ever before. The Co-operative Cheese and Butter Factories, the Egg and Poultry Association, Swine Breeders' Clubs, Sheep Breeders' Association, Grass Seed Growers, and the Potato Growers' Association have placed our province along the lines of co-operative marketing in the most advanced position in Canada."

The Speech also referred to the participation of the province in the Dominion grant for technical education. "The grant for technical education is being applied to the carrying on of night schools and short courses in various technical subjects with very gratifying results. The extension of this grant to agricultural education is confidently hoped for, in view of the recommendation submitted in the Duncan Report." A course of instruction for fishermen is being organized under a Federal biological board at Halifax and three of the provincial fishery inspectors have been in attendance. The provincial government will endeavour, in co-operation with the Federal Department, to render this course of instruction available to the fishermen.

With the object of raising the professional qualifications of teachers, the minimum period of attendance at the Normal School has been increased from five to nine months.

BITUMINOUS COAL MINERS' DISPUTE IN THE UNITED STATES

THE agreement between the operators of bituminous coal mines in Western Pennsylvania, Ohio, Indiana and Illinois (the "Central Competitive Field") and the United Mine Workers of America expired on March 31 without a new agreement or a renewal being signed, so that on April 1 the mines in that area were shut down. The wages in other districts have been based for many years upon the wages in the Central Competitive Field, but in this instance the union agreed some time ago that the miners in such fields would continue to work at the wage scale hitherto in force pending a settlement, and this offer was accepted in most districts. In the Southwestern Field, however, this was not accepted and a shut-down occurred there also. The following are the numbers of miners reported to be out in the various fields: Central competitive field: Illinois 72,000; Pennsylvania 40,000; Ohio 30,000; Indiana 22,000; Southwestern Field: Kansas 8,000; Oklahoma 9,000; Iowa 9,000; Missouri 4,000; the total being about 200,000 A few days before the end of March the union announced that in the Central Competitive Field, miners would be permitted to work at the old wage scale, and early in April it was reported that a number of operators were accepting this offer, but that they were operating small mines only.

The agreement which expired was signed three years ago at Jacksonville, Florida, and provided for a continuance of the wage scales in force since 1920, the agreement signed that year being renewed in September, 1922, after a strike from April to August inclusive, which involved anthracite miners as well as bituminous miners. A joint conference of operators and union representatives met at Miami on February 14, 1927, to negotiate a new agreement, the operators proposing a reduction in wages to which the union would not agree. Subsequent attempts at a settlement failed. The operators, it is reported, wished to reduce wages to the level of the non-union mines, with which they stated they could not compete, with the result that the non-union mines were securing an increasing percentage of the coal business, namely from less than forty per cent in 1922 to about seventy per cent in 1926. The lower wages proposed were reported to be on the basis of $5.50 per day for underground labourers and $4.50 for surface labourers as compared with a minimum of $7.50 for labourers under the union scale.

Since 1924 wages of coal miners in Canada have not been based upon scales in the United States Central Competitive Field. The miners in Alberta and Southeastern British Columbia, District 18 of the United Mine Workers of America, were involved in a dispute in 1924 from April to October to maintain the 1920 scale of wages as in the United States, but agreed to a decrease of 12½ per cent, after which the district became disorganized. (Labour Gazette, May, 1925, pp. 510-514). In Nova Scotia, organized under the United Mine Workers since 1919, it was then agreed that wages should not be based upon conditions in the United States.

Salaries of School Teachers in New Brunswick

The annual report of the chief superintendent of education for New Brunswick for the school year 1925-6 notes the increased number of schools, pupils and teachers, which now exceed the records of any previous year in the province. More than 2,300 schools were in operation, with 2,500 teachers, and 80,769 pupils. The supply of teachers now exceeds the demand, particularly in the highest and lowest classes. The practice of making loans to student-teachers was discontinued last year, as it was no longer necessary to stimulate attendance at the Normal School. The average salaries of teachers in 1916 and 1926 were as follows:—

Average Salaries of School Teachers in New Brunswick in 1916 and 1926.

Class of Teachers.	1916.	1926.
Grammar School..	$1,242 60	$2,166 89
Superior School..	799 03	1,340 73
First Class, Male..	873 64	1,259 91
Second Class, Male	393 77	704 70
Third Class, Male..	290 97	524 37
First Class, Female.. ..	482 06	948 69
Second Class, Female.. ..	318 60	680 31
Third Class, Female.. ..	261 72	527 60

Free text books were provided during the year for children of the lower grade schools.

About one hundred civic employees on outside service in Ottawa are to have one week's holidays with pay during 1927. It is stated that an ordinary labourer or outside employee who is paid by the hour and works at least 48 weeks in the year is entitled at least to six days' holidays in the year with pay.

OLD AGE PENSIONS IN CANADA

Text of Act passed by Dominion Parliament

THE old age Pension Act, 1927, passed by the House of Commons on March 4, (LABOUR GAZETTE, March, 1927, page 268) was passed by the Senate on March 24, without amendment and received the Royal Assent on March 31. The Act is based mainly on the recommendations of the special committee of the House of Commons appointed in 1924 on the motion of the Prime Minister to inquire into an old age pension scheme for Canada (LABOUR GAZETTE), June, 1924, page 477; July, 1924, page 580, etc.). The committee made a study of existing conditions in Canada in regard to provisions required for the relief of aged persons, and of systems of old age pensions in other countries,* and finally recommended the establishment of an old age pension system for deserving indigent persons of 70 years of age and upwards, the maximum rate of the pension to be $20 per month, subject to reduction according to the pensioner's private means or ability to support himself. The committee recommended further that the Dominion Government should pay half the amount of the pensions, the other half, as well as the cost of administration, to be borne by such provinces as may pass legislation adopting the system.

A bill based on the committee's recommendations was passed by the House of Commons on May 28, 1926, without division, but this bill was rejected by the Senate on June 8, 1926, on the motion for the second reading. Reference was made in the LABOUR GAZETTE, June, 1926 (pages 527-528), to the discussion which occurred in the Senate on this occasion.

The bill of 1927 is identical in terms with that of last year. The speech delivered in the House of Commons on February 15, 1927, by the Hon. Peter Heenan, Minister of Labour, outlining the provisions of the new measure was given in the last issue of this GAZETTE. The Minister dealt with the question of jurisdiction in regard to pensions, pointing out that the special committee had recommended a joint federal and provincial system after consultation with the Department of Justice. The initial step, he said, was being taken by the Dominion. Replying to the suggestion that a purely federal scheme would be preferable to a joint system, Mr. Heenan recalled that the House of Commons had rejected a proposal to the same effect at a previous session. He remarked that since that time the subject of old age pensions had been prominently before the electorate, and the proposed measure had been endorsed by the people of Canada. The Minister intimated further that while the bill provided relief for those at present in need, it was hoped that the existing system of Dominion Government Annuities would soon be developed into a broad scheme of social insurance on a contributory basis. This latter plan would, he hoped, also receive the co-operation of the provinces.

The debate on the bill in the House of Commons indicated general approval on the part of all the members of the principle of old age pensions. Criticism of the measure was mainly in the form of suggestions that the pension scheme should be on a purely federal basis, that it should be contributory, and that the age limit should be lower than 70 years. On the first of these points the Hon. Hugh Guthrie, leader of the Opposition in the House, said:—

"We ask for a federal measure. We prefer a scheme which will apply equally to every corner of Canada. This bill is limited to those persons who are in destitution and who have reached the age of seventy years. Apply the proposal to the Dominion of Canada equally and let the Dominion treasury bear the expense. I say to my right honourable friend and his government: If you will do that, I believe you will have something in the nature of a real pension measure for the class of persons to whom it applies. I am not seeking in my present remarks to extend the measure beyond those described in this resolution, namely, those who are destitute and at the age of seventy; but taking that as the standard adopted by this government, I say: Go further than you have gone; make it an all Canadian scheme; adopt the federal principle and apply it throughout the whole Dominion. Then you will have a pension scheme which may and which will be of some advantage to the people who seek it."

The Hon. Raoul Dandurand, who was in charge of the bill in the Senate, explained its provisions briefly, and referred to the explanation which he had given of the same bill last session (LABOUR GAZETTE, June 1926, page 528). He expressed the opinion that in the future it might be necessary for Canada to follow the example of Great Britain in supplementing the present bill by a contributory system. On

*A special supplement was issued with the LABOUR GAZETTE, March, 1926, entitled "Old Age Pension system existing in various countries."

the other hand, he proceeded, "even if we had a contributory scheme to present to the honourable members of this Chamber it would be absolutely necessary to pass an enactment containing the principle of this present bill, because men of 70, 65, or 60 cannot be asked to pay the premiums which would be necessary to entitle them to a fair pension at 70. There is a period which we must take care of, and that period may be fifteen or it may be twenty years. I mention the importance of a contributory system in order to draw the attention of the Prime Ministers of the various provinces to the desirability of hastening to place upon their statute books a scheme of that kind, and I am in hopes that when they meet in Ottawa next summer or next autumn, they will together examine the question whether they should not enact such a law in their respective provinces. I say this because I am aware that a scheme like the one I present to you, which should last, and must last about twenty years, is in many instances a rather heavy burden. One does not need to be a professor of economics to recognize that you cannot charge a budget with a fairly large sum without providing the ways and means. The treasurers of the various provinces will have to examine into their finances and see how they are to meet that fairly large obligation, and from this day forward they can make arrangements for a bill which will cover not the present time, but the future, and which will help the scheme to become self-supporting."

The debate in the Senate on the motion for the second reading was continued for several days. Some of the points that were raised in criticism of the Government's proposals were stated by the Hon. W. B. Ross, leader of the Opposition. He expressed an objection to the provision that an applicant may only qualify for a pension on the plea of poverty. "I object to that as one of the worst features of the bill," he said; "if you are going to give a man a pension, give it to him at a certain age....If the act that we are promised is constructed on that basis, I for one am perfectly willing to give it not only careful, but very sympathetic consideration." After pointing out certain anomalies which might occur under the proposed residence qualifications for a pension, the Hon. Mr. Ross said: "I am quite prepared to consider sympathetically an Old Age Pensions Bill that would be applicable to every man and every woman in the country if it were contributory, and made pensions payable at the proper time without conditions or limitations of any kind, or without any inquest as to whether the applicant is worth $50 or $5,000. I have deemed it necessary to say this, because there is a tendency on the part of a mind not trained to reasoning to conclude that a person speaking against a bill of this kind is opposed to every form of old age pension." Senator Ross stated further that his main objection to the bill was that it interfered with the provinces; "I do not know," he said, "where this Parliament gets its commission or its power to pass an act compelling the province to participate, or what is the same thing, inflicting a penalty indirectly on a province if it does not come in under a scheme of this kind. Therefore, we have to face the question of interference with the province on the part of the Parliament of Canada."

The motion for the second reading of the bill was agreed to on a division by 61 votes to 14, and the bill passed through the subsequent stages without amendment.

The text of the act is as follows:—

An Act Respecting Old Age Pensions

1. This Act may be cited as the Old Age Pensions Act, 1927.

2. In this Act the expression:

(*a*) "pension authority" means the officer or body charged by law with the consideration of applications for pension or with the payment of pensions.

(*b*) "pension" means old age pension payable in accordance with this Act and the regulations thereunder.

(*c*) "pensioner" includes an applicant for a pension.

(*d*) "province" includes the Yukon Territory, in respect to which 'Gold Commissioner' shall be read for 'Lieutenant-Governor in Council'.

(*e*) "statute" includes ordinance or order having the force of law.

3. The Governor in Council may make an agreement with the Lieutenant-Governor in Council of any province for the payment to such province quarterly of an amount equal to one-half of the net sum paid out during the preceding quarter by such province for pensions pursuant to a provincial statute authorizing and providing for the payment of such pensions to the persons and under the conditions specified in this Act and the regulations made thereunder.

4. Every agreement made pursuant to this Act shall continue in force so long as the provincial statute remains in operation or until after the expiration of ten years from the date upon which notice of an intention to determine the agreement is given by the Governor General to the Lieutenant-Governor of the province with which the same was made.

5. Before any agreement made pursuant to this Act comes into operation the Governor in Council shall approve the scheme for the administration of pensions proposed to be adopted by the province, and no change in such scheme shall be made by the province without the consent of the Governor in Council.

6. As soon as agreements under this Act have been made with two of the provinces adjoining the Northwest Territories, the Commissioner of the said territories may submit to the Governor in Council for approval a scheme for the administration and payment of pensions therein, and upon the approval of such scheme, the same shall stand, in all respects other than its duration, in the same position as an agreement with a province.

7. All sums payable to any province in pursuance of any agreement made under this Act shall be payable from time to time on the certificate of the Minister of Finance out of any monies belonging to the Consolidated Revenue Fund of Canada not otherwise appropriated.

8. (1) Provision shall be made for the payment of a pension to every person who, at the date of the proposed commencement of the pension:—

(*a*) is a British subject, or, being a widow, who is not a British subject, was such before her marriage;

(*b*) has attained the age of seventy years;

(*c*) has resided in Canada for the twenty years immediately preceding the date aforesaid;

(*d*) has resided in the province in which the application for pension is made for the five years immediately preceding the said date;

(*e*) is not an Indian as defined by the Indian Act;

(*f*) is not in receipt of an income of as much as three hundred and sixty-five dollars ($365) a year, and

(*g*) has not made any voluntary assignment or transfer of property for the purpose of qualifying for a pension.

(2) The receipt of a pension shall not by itself constitute a disqualification from voting at any provincial or municipal election.

9. (1) The maximum pension payable shall be two hundred and forty dollars yearly, which shall be subject to reduction by the amount of the income of the pensioner in excess of one hundred and twenty-five dollars a year.

(2) Where a pensioner is the owner of an interest in a dwelling house in which he resides and the pension authority accepts a transfer to it of such interest, the pension payable to the pensioner shall not be subject to any reduction in respect of the annual value of such interest, but the pension authority shall, on the death of the pensioner or upon his ceasing to use such dwelling house as his place of residence, be entitled to sell the pensioner's interest therein and to retain out of the proceeds of such sale the amount of all payments made to the pensioner by way of pension in excess of the amount he would have received if such interest had not been transferred to the pension authority, together with interest on the said payments at the rate of five per cent per annum, compounded annually.

(3) A pension authority shall be entitled to recover out of the estate of any deceased pensioner, as a debt due by the pensioner to such authority, the sum of the pension payments made to such pensioner from time to time, together with interest at the rate of five per cent per annum compounded annually, but no claim shall be made by a pension authority for the recovery of such debt directly or indirectly out of any part of the pensioner's estate which passes by will or on an intestacy to any other pensioner or to any person who has, since the grant of such pension or for the last three years during which such pension has continued to be paid, regularly contributed to the support of the pensioner by the payment of money or otherwise to an extent which, having regard to the means of the person so having contributed, is considered by the pension authority to be reasonable.

10. Where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in more than once province in which he would have become pensionable if he had continued to reside therein, the province in which the pension is granted shall be entitled to be reimbursed, by the other province or provinces in which the pensioner has resided as aforesaid, a proportion of the pension equal to the proportion which the duration of the pensioner's residence in such other province bears to twenty years.

11. Where a pensioner has during part of the twenty years immediately preceding the date of the proposed commencement of pension resided in a province in which he would not have become pensionable even if he had continued to reside therein, the amount of the pension which would otherwise be payable to such pensioner shall be reduced by the same proportion as the duration of the pensioner's residence in such other province bears to twenty years.

12. In any case in which, pursuant to either of the last two preceding sections, a pension is to be proportionately reimbursed or proportionately reduced, the following provisions shall have effect:—

(*a*) The proportionate reimbursement or proportionate reduction shall be calculated by reference to the nearest number, whether greater or less, of complete years during which the pensioner has been resident in any of the provinces in question;

(*b*) Mere lapse of time shall not affect any such proportionate reimbursement or proportionate reduction;

(*c*) If, after any reduced pension has been granted, an agreement under this Act is made with a province by reference to the pensioner's residence within which such reduction or any part thereof has been calculated, the pension may thereafter be proportionately increased and the amount of such increase shall be reimbursed in accordance with this Act, to the province by which such pension is paid.

13. When, after the grant of a pension in any province, the pensioner transfers his permanent residence to another province with which an agreement under this Act is in force, the pension shall thereafter be paid by the province to which the pensioner has removed, but such province shall be entitled to be reimbursed an amount equal to one-half of such pension by the province in which the pension was originally granted.

14. Where the pensioner, after the grant of a pension, transfers his permanent residence

to another province with which no agreement under this Act is in force, the pension shall continue to be paid by the province in which the pension was granted.

15. Where a pensioner, after the grant of a pension, transfers his residence to some place out of Canada, his pension shall cease, but his right thereto shall revive upon his again becoming resident in Canada.

16. No pension shall be subject to alienation or transfer by the pensioner, or to seizure in satisfaction of any claim against him.

17. On or before the thirtieth day of April in each year the Minister of Finance shall make a full report to Parliament of the operation of the agreements made pursuant to this Act and of the monies of Canada paid to the provinces under each of the several agreements entered into pursuant hereto.

18. Any pension authority shall have the right for the purpose of ascertaining the age of any pensioner to obtain without charge;

(*a*) from the registrar of vital statistics or other like officer of any province with which an agreement under this Act is in force a certificate of the date of the birth of such pensioner, or

(*b*) subject to such conditions as may be specified in the regulations made under this Act, from the Dominion Bureau of Statistics, any information on the subject of the age of such pensioner which may be contained in the returns of any census taken more than thirty years before the date of the application for such information.

19. The Governor in Council shall have power from time to time, on the recommendation of the Minister of Labour and with the approval of the Treasury Board, to make regulations, not inconsistent with the provisions of this Act, with regard to the pensions herein provided for, and, without limiting the generality of the foregoing provision, the Governor in Council shall have power to provide by regulation for:—

(*a*) The time preceding the attainment of pensionable age at which applications for pension may be made;

(*b*) The time at which, after application therefor, the payment of pension shall commence;

(*c*) The definition of residence and of the intervals of absence from Canada or a province by which residence therein shall not be deemed to have been interrupted;

(*d*) The evidence to be required or accepted by a pension authority in support of an application for pension;

(*e*) The manner in which the income of a pensioner is to be determined for the purpose of this Act and in particular the mode of reckoning the income of either one or two spouses who live together;

(*f*) The evidence from which the making of transfers of property for the purpose of qualifying for pension is to be inferred;

(*g*) The circumstances in which pensions may be paid for the benefit of persons supported or under treatment in public institutions;

(*h*) The mode in which pensions are to be payable;

(*i*) The time within which a pension voucher may be cashed;

(*j*) The persons by whom pension vouchers may be presented for payment;

(*k*) The circumstances justifying or requiring the suspension of the payment of a pension and the recommencement of its payment;

(*l*) The reports to be made by pensioners and others of events affecting the right to or the amount of a pension;

(*m*) The administration of a pensioner's property by a pension authority;

(*n*) The recovery with or without interest of pension payments made by reason of the non-disclosure of facts or by reason of innocent or of false representations;

(*o*) The time within which and the circumstances under which applications or proposals may be entertained for the increase or reduction of a pension which has been granted;

(*p*) The method of accounting and of the settlement of balances due by Canada to any province or by one province to another;

(*q*) The penalties to be imposed for breaches of the regulations, such penalties not to exceed a fine of fifty dollars or imprisonment for three months, or both fine and imprisonment;

(*r*) The constitution and powers of an interprovincial board to interpret and recommend alterations in the regulations.

(2) No regulation by reference to which any agreement with a province has been made shall be altered except with the consent of such province or in accordance with the provisions of the regulations to which it has agreed.

20. All regulations made under this Act shall, from the date of their publication, in the *Canada Gazette*, have the same force and effect as if they had been included herein. They shall be presented to Parliament forthwith after their publication if Parliament is then sitting or, if not, within fifteen days from the commencement of the session beginning next after such publication.

The government of Alberta has appointed the Hon. Chief Justice Harvey as a commissioner to conduct an inquiry under the Public Inquiries Act into the explosion which occurred on November 23, 1926, in a coal mine at Coleman, Alberta, whereby ten men lost their lives.

Bulletin No. 19 of the Vocational Education Series has just been issued by the Technical Education Branch of the Department of Labour under the title "Industrial Education in Canadian Vocational Schools." It contains an outline of the purpose of industrial education and deals, at some length, with prevocational, pre-employment and part-time or continuation education as they are found in Canada to-day. This bulletin also contains a discussion on textbooks and courses of study for Canadian vocational schools.

38726—3½

PARLIAMENT OF CANADA PROVIDES FOR UNION LABEL REGISTRATION

AN Act to amend the Trade Mark and Design Act (Revised Statutes of Canada, 1906, Chapter 71) to permit of the registration of labour union labels, was introduced in the House of Commons by the Honourable Peter Heenan, Minister of Labour, on March 7, on which occasion the Minister explained the purpose of the proposed legislation. The Bill was passed by the House of Commons on March 25 without division, and by the Senate on April 7, receiving the Royal Assent on April 14.

This Act is based on a request of organized labour for permission to register their trade union labels with the Dominion Government in order to prevent their unauthorized use, and also to obviate the use of forgeries and counterfeits. It is designed, briefly, to secure for union labels the same measure of protection as is already accorded to trade marks. A similar protection is granted at present to union labels in Great Britain, in Australia and in the United States.

Bills for this same purpose had been introduced in Parliament on ten previous occasions, in the following years: 1895, 1896, 1897, 1898, 1899, 1900, 1901, 1903, 1905 and 1926, respectively.

The union label is employed to distinguish the particular goods on which it is placed as having been produced in accordance with what are regarded by the workmen employed as satisfactory wages, hours and other working conditions. Union labels have been adopted by various trade unions in the course of the past forty years and a large number of agreements have been made with individual employers for their use. The use of the union label on goods is subject to agreement in all cases between the unions and the employers. It is provided in the Act accordingly that no union labels are to be placed upon goods or otherwise displayed without the consent of the proprietor; moreover, when an agreement has been reached with an employer for the use of a union label on his goods, such authorization shall be subject to cancellation only on twelve months' notice, unless otherwise specified by agreement. Goods bearing the union label may also be sold at any time if at the time the union labels were applied to them the proprietor was entitled to so apply them.

The Minister of Trade and Commerce, who is charged with the administration of the Trade Marks Act, is authorized by the new Act to refuse the registration of union labels in cases where he is not satisfied. Authority is given to the Exchequer Court to direct the cancellation of the registration of union labels after investigation and hearing, if in the opinion of the Court such action is justified by all of the circumstances of the case. Penalties are provided to protect union labels against unauthorized use or counterfeit.

In the House of Commons the Bill was passed without amendment. During its passage through the Senate it was referred to the Banking and Commerce Committee, where an opportunity was afforded for hearings from persons interested, including the representatives of various trade unions, the Canadian Manufacturers' Association, and the Retail Bureau of Canada.

Slight amendments were made in the wording of the Bill at the request of the Government during its consideration by the Senate Committee on Banking and Commerce. These changes did not, however, involve the principle of the measure. A provision was also added that the union shall accord the use of the union label to any applicant who complies with the rules of the union.

The Hon. Senator Dandurand, in moving the second reading of the Bill in the Senate, outlined the history of the movement for the registration of union labels. Similar measures, he said, were proposed in Parliament as far back as 1895 and repeatedly afterwards, but failed to pass. Since that time, he said, organized labour had made great increases in membership, and in addition to the funds which were maintained years ago for aggressive and protective action, unions in a number of cases had developed important insurance funds for the protection of their own members; they had also organized banks, and even entered the field of business. Petitions for the passage of this measure, he added, had been received from labour organizations in all parts of Canada.

"When the Union Label Bill came before this honourable body twenty-five or thirty years ago," Senator Dandurand continued, "it was contended that it would bring loss and occasion embarrassment to many employers through the efforts which the organized workers might make to force the label upon them. In the light of the actual results it must be admitted, however, that these distressing anticipations have not been fulfilled. True, the union label has never been given the protec-

tion of law in Canada which it has received elsewhere, but labour unions have continued to seek the granting of such fair wages and hours conditions in manufacturing and other establishments, and in many cases where these conditions were granted they have permitted employers to place the union label on their products as an indication to the public and to other workers of the satisfactory labour conditions existing in these respective plants.

"One frequently sees this mark of approval which labour has placed on the product of individual Canadian shops and factories such as boots and shoes, clothing, printed goods, etc., but I am assured through the department of the Federal Government which has to do with labour matters that it has not been the practice of trade unions to force the use of the union label on anyone, and, indeed, that the record which is kept of strikes and lockouts occurring in Canadian industries from year to year does not show that the union label figures at all in the lists of strikes and lockouts. It must therefore be admitted that the fears which were entertained on this score years ago have not been realized, and this fact should influence our judgment in dealing with the measure which is now before the House.

"All that this Bill involves is the granting to organized labour in Canada of the right to register their trade union labels with the Dominion Government in order to prevent their unauthorized use, and also to obviate the use of forgeries and counterfeits. The Bill is designed, briefly, to secure for labels the same measure of protection as is already accorded to trade-marks."

Contributions to the discussion were made by the Hon. Senators Smeaton White, G. D. Robertson, J. A. Calder, C. P. Beaubien, J. D. Taylor and others.

The Hon. Senator Beaubien, in discussing the bill, stated that the real issue was whether labour should be treated as a "privileged class". "Are we going to intervene," he asked, "between the open shop and free labour on the one hand, and on the other hand the closed shop, controlled by the iron hand of the trade union, dictating not only to the proprietor, but also to the men who work for him what they must do?" Senator White also contended that the bill discriminated unfairly between the unions and the employers, claiming that if the union wished to injure any individual employer the latter could not enter suit "against something that is not recognized by law."

The Hon. Senator G. D. Robertson outlined the recent history of the union label movement in Canada, showing that the principle of registered labels had been accepted at a joint conference in 1919 at which the moderate elements of both parties were represented, the outcome of that conference being the preparation of a bill similar to that now under discussion. Answering the question, why this legislation is necessary, Senator Robertson said it was "because these workmen engaged in various industries, of which there are four particularly affected—clothing workers, boot and shoe workers, cigar makers, and printers, have had past experience that makes this legislation desirable. The clothing workers, or garment workers, as they are commonly known, number many thousands. For the most part they are organized, and they have contracts with many employers, but there are numerous other employers manufacturing clothing who do not engage union labour and have no contracts with their work people, and therefore impose upon them conditions that are unsanitary and unfair, and goods manufactured under those unfair and unsanitary conditions are upon the shelves of stores for you and me to purchase, under a misrepresentation of the facts."

The Hon. Senator J. D. Taylor, spoke as a former printer, and also with experience as a proprietor making agreements with the International Typographical Union. Referring to the attitude of organized printers in the making of agreements between the union and employers, he said "they come in a spirit of negotiation to the proprietors of newspapers, and offer very substantial guarantees of protection to those proprietors. They ask, in return, for a mutual arrangement of satisfactory working conditions, and when the proprietor accepts those he does so with the assurance from the International body itself that he will be absolutely protected against any improper use by the local union of the very great authority which the International confers upon them. So strongly is that union organized that they are able to compel obedience to their laws and regulations by any member of the union, to keep every member at his work so long as there is any dispute between them and their employers; provided the employers have agreed to accept the arbitration of the International body at their International headquarters. That is a method that is called into effect by leading publishers in Canada nearly every year, and there has yet to be a single instance of any oppression or any ill-feeling in the long-run result in those organizations."

The text of the Act is as follows:

AN ACT TO AMEND THE TRADE MARK AND DESIGN ACT

1. Section four of the *Trade Mark and Design Act*, chapter seventy-one of the Revised Statutes of Canada, 1906, is amended by inserting the following paragraphs immediately after paragraph (*b*) thereof:—

"(*c*) 'Labour union' or 'union' means any organization of employees engaged in the manufacture or production of goods formed for the purpose of regulating the relations between employers and employees;

"(*d*) 'union label' means any mark, term, design, emblem, figure, sign, seal, stamp, diagram, ticket, device or form of advertisement, adopted by a labour union,"

2. Section five of the said Act is amended by adding thereto the following subsections:—

"(2) Any union label heretofore or hereafter adopted by any labour union to designate, make known, or distinguish any goods, wares, merchandise, or product of labour, wholly or partly manufactured, produced, or prepared by the labour of such union, or of any member or members thereof, may be registered for the exclusive use of such labour union in the manner herein provided; and the said union shall, for the purpose of this Act, be considered the proprietor of such label.

"(3) No union label shall be put or placed upon any goods, wares, merchandise, or product of labour, without the consent of the owner or proprietor of such goods, wares, or merchandise."

3. Section eleven of the said Act is repealed and the following is substituted therefor:—

"11. The Minister may refuse to register any trade mark or union label,—

(*a*) if he is not satisfied that the applicant is undoubtedly entitled to the exclusive use of such trade mark or union label;

(*b*) if the trade mark or union label proposed for registration is identical with or resembles a trade mark or union label already registered;

(*c*) if it appears that the trade mark or union label is calculated to deceive or mislead the public;

(*d*) if the trade mark or union label contains any immorality or scandalous figure;

(*e*) if the so-called trade mark does not contain the essentials necessary to constitute a trade mark, properly speaking.

4. Section thirteen of the said Act is amended by adding thereto the following subsection:—

"(3) Every labour union may register a union label by filing an application therefor, accompanied by a declaration made by the President, Secretary, or other executive officer of such union, specifying the name of the union on behalf of which such union label is being registered, the class of merchandise and a description of the goods to which it has been or is intended to be appropriated, and thereafter such union shall have the exclusive right of such union label."

5. Section fourteen of the said Act is amended by adding the following subsection thereto:—

"(2) The certificate of the registration of any union label shall also set forth the name of the labour union registering such union label, the number of such union label and the number or letter employed, to denote or correspond to the registration, and such certificate, in the absence of proof to the contrary, shall be sufficient evidence of the union label, of the name of the union, of the union named as proprietor, being proprietor, of the commencement and term or registry and of compliance with the provisions of this Act."

6. Section fifteen of the said Act is amended by adding the following subsection thereto—

"(3) (*a*) No union label registered by any labour union may be assigned by any process of law or otherwise.

(*b*) A labour union may authorize the use of any union label registered by it and such authorization to use shall be subject to cancellation only upon twelve months' notice, unless otherwise specified in any agreement for the use of such union label; and any goods may be at any time sold bearing such union label, if when such label was used in respect of such goods, the person, firm or corporation was so authorized. The union shall accord the use of the union label to any applicant who complies with the rules of the union.

7. Section eighteen of the said Act is amended by adding the following subsection thereto:—

"(3) The Exchequer Court of Canada may, on application and after investigation and hearing of the parties concerned, direct the cancellation of the registration of any union label registered by a labour union under the provisions of this Act, if in the opinion of the Court such action is justified by all the circumstances of the case."

8. Section nineteen of the said Act is amended by adding the following subsections thereto:—

"(2) An action or suit may be maintained in any court of record having jurisdiction to the amount claimed, by any labour union which has complied with the provisions of this Act as to registration, or by any authorized executive officer thereof, against any person, firm, labour union, association, or corporation, using without permission the union label of such labour union.

"(3) Nothing in this Act contained shall enable any suit, action, garnishee, interpleader or other proceeding to be brought, had or maintained against a labour union, except for the purpose of this Act."

9. The said Act is amended by inserting the following section immediately after section twenty-one:—

"21A. (1) No person, firm, labour union, association, or corporation, other than the labour union registering such union label, unless with the consent of such labour union, shall,

(*a*) Mark any goods or any articles of any description whatever with any such union label or with any part thereof, whether by applying such union label or any part

thereof to the article itself or to any package or thing containing such article or by using any package or thing so marked which has been used by the labour union which has registered such union label; or,

(*b*) keep or have in his possession for sale any goods, wares, merchandise, or product of labour, to which, or on which any such counterfeit or imitation is printed, painted, stamped, impressed or otherwise displayed; provided always that such person, firm, labour union, association, or corporation shall be liable only in cases where the union label was counterfeit or imitation to his, their, or its knowledge; and provided further that any proceedings taken under this Act shall be against the person, firm, labour union, association, or corporation that originally attached the counterfeit or imitation union label to such article;

(*c*) procure either for himself or on behalf of any other person, firm, labour union, association or corporation, the registering of any union label under the provisions of this Act by making any false or fraudulent representation or declaration verbally or in writing or by any fraudulent means whatever; or,

(*d*) make or cause to be made any die, block, machine or other instrument for the purpose of forging or being used for forging a union label; or,

(*e*) dispose of or have in his possession any die, block, machine or other instrument for the purpose of forging a union label.

(2) Every person, firm, labour union, association or corporation contravening the provisions or any of the provisions of this section shall be guilty of an offence and liable for each offence on summary conviction to a fine of not less than twenty dollars and not exceeding five hundred dollars.

(3) Every complaint under the preceding subsection may be made by an executive officer of the labour union which has registered the union label as in this Act provided."

10. The following sections are inserted in the said Act immediately after section twenty-two:—

"22A. When a complaint in writing, verified by affidavit, is made to any court or officer having authority to issue search warrants, showing that complainant has reason to believe that counterfeits or imitations of any union label registered by a labour union, as in this Act provided, or tools, cuts, plates, dies, blocks, machinery or materials prepared or provided for the making of such counterfeits or imitations, are concealed in any building, receptacle or place (particularly describing the same), such court or officer shall, if satisfied that there is reasonable cause for such belief, issue a warrant to search such building, receptacle or place for the articles described in the complaint.

"22B. Search warrants issued under this Act shall be in the form prescribed by the *Criminal Code*, so far as such form is applicable, and shall be directed to and be served and returned by the same officers in the same manner as search warrants in other cases in the said Code provided for; and the proceedings and practice after such return shall conform as nearly as may be to the practice and proceedings in regard to search warrants in such other cases."

11. Section forty-six of the said Act is amended by inserting the word "label" after the words, "trade mark" in the 7th and 24th lines thereof.

Third British Census of Production

The Board of Trade of Great Britain has issued the first four of the series of preliminary reports in which the results of the Third Census of Industry are summarized (Northern Ireland is not included). As in the case of the first Census (1907), the inquiry covers agriculture, forestry and fisheries, in addition to the manufacturing, mining and building industries. The present series of Reports does not include agricultural production or fisheries, which are being dealt with by other Government Departments. The reports give statistics of quantity and value of production, net output, exports and imports, persons employed, power in use, etc.

The industries covered by the first four reports are as follows:—

No. 1—Iron and steel trades, including blast furnaces, smelting, rolling, and founding; wrought iron and steel tube; tinplate.

No. 2—Cotton spinning and weaving; boot and shoe trade; rubber; paints, colours and varnish.

No. 3—Grain milling trades; sugar and glucose; spirit distilling; spirit compounding, rectifying and methylating trade; tobacco trade.

No. 4—Coal mining; coke and by-products; manufactured fuel; railway carriage and wagon building.

Over fifty persons are attending the School for Fisheries which opened in the Fisheries Experimental Station at Halifax on February 14. This attendance is rather in excess of what was expected and is regarded as indicative of an increasing interest in Maritime fisheries. Provisions have been made for lectures in every branch of preparing fish for the market.

LABOUR LEGISLATION IN BRITISH COLUMBIA AND SASKATCHEWAN

British Columbia

THE Legislature of British Columbia which met on December 16 and was prorogued on March 7 enacted several laws of interest to labour, including an Act to Provide for Old Age Pensions and amendments to the Minimum Wage Act, the Factories Act and the Mechanics' Lien Act.

The Old Age Pension Act enables the Provincial Government to enter into an agreement with the Government of Canada pursuant to the provisions of any act of the Dominion relating to old age pensions or any regulations made thereunder, and for the payment of one-half of the net sum expended by the Province for such pensions. The Workmen's Compensation Board is charged with the administration of the Act, including the consideration of applications and the payment of pensions. No change may be made in any scheme for the administration of pensions which has been approved by the Dominion Government except with that Government's consent. The Act will come into operation on Proclamation.

Amendments were made to those sections of the Factories Act which deal with the employment of children, young girls and women, and with night work in laundries. No child may now be employed in a factory except by written permission of the inspector, which must specify the hours of employment, not exceeding six. Formerly the employment of children was permitted in the business of fish-canning or curing or in fruit packing during the time of fish runs or in the fruit seasons. A further amendment makes overtime and night work of women and young girls in the above-mentioned industries and seasons conditional upon the written consent of such girls or women or their parents or guardians.

The Minimum Wage Act was amended to provide that employers' statements of wages, hours and working conditions of female employees, as required under the Act, should be verified by statutory declaration. Employers' registers must now contain a record of wages paid and hours worked, as well as the names, ages, and addresses of the women employed. Orders of the Board must be kept posted free from mutilation or defacement. A new clause is added which permits the Board to reconsider, without calling a conference, any order which has been in force for at least one year, and to amend such order or replace it by a new one. An employer who contravenes an order of the Board by payment of less than the minimum wage will, in future, upon conviction, be ordered to pay to the employee the difference between the wages paid and the minimum wage.

An amendment to the Mechanics' Lien Act provides that the right of a person entitled to lien shall pass to his personal representative in the event of his death, and may, subject to the provisions of the Act, be assigned by any instrument in writing. Formerly only the right of a lien-holder passed to his representative and was capable of being assigned.

The Superannuation Act was amended to provide that, upon application in writing from seventy-five per cent of all the employees or of the employees of any group of permanent employees, a municipality must adopt a superannuation scheme as provided by the Act, paying from the revenues all contributions required from it as an employer. The Act, which was passed in 1921, entitles a fireman to superannuation at fifty years of age, a policeman at fifty-five years, and other employees at sixty years in the case of men, and fifty-five years in the case of women. Persons retired owing to mental or physical disability are also entitled to allowances. An agreement is to be made between the employer and employees for the reduction from the wages of employees over thirty-five years of age of not less than four per cent and not more than eight per cent of wages, the employer contributing an equal amount *plus* one per cent towards a reserve fund. The rate may not be greater than seven per cent if the employee is under fifty years of age or greater than six per cent if he is under forty-five years of age, or above five per cent if he is under forty years of age. Special voluntary contributions may be made by or on behalf of any employee. Interest at the rate of five per cent per annum is credited semi-annually to the account of each employee. The superannuation allowance consists of the sum to which the amount at the employee's credit, together with a like amount taken from his employer's account and special contributions, if any (all with accrued interest), would entitle him according to the prescribed tables then in force. Any additional allowance payable from the special reserve fund is also added. The pension may be granted on any one of three plans, a single life allowance payable for the lifetime of the contributor; a guaranteed allowance payable for the life of the contribu-

tor or for a certain term of years, whichever period is longer; or a joint life and "last survivor" pension, payable during the joint life of the contributor, and any person nominated by him prior to the granting of the allowance, and during the lifetime of the survivor. In the event of the death or dismissal of the contributor before he has been granted a superannuation allowance the amount to his credit in the Superannuation Fund is refunded to his personal representative or to him as the case may be.

An amendment to the Motor Vehicle Act provides for the issuance of salesmen's licenses to persons operating motor vehicles for demonstration purposes. Rules for the granting of permits to minors are made more stringent.

A subsection added to the Attachment of Debts Act relates to the information to be given in affidavits in support of a garnishing order.

The Co-operative Associations Act was amended to provide for reduction of share capital, and for shorter notice in the case of certain general meetings.

An amendment to the Public Schools Act authorizes the Council of Public Instruction, on the application of the Board of School Trustees of two or more adjoining municipal school districts, to unite the districts for the purpose of constituting a technical school area, and to establish one or more technical schools therein. Provision is made for the management of these schools.

During the session a Select Committee of the House was appointed to enquire into the administration of the Workmen's Compensation Act and the Mothers' Pensions Act and will report at the next session.

The Legislature debated at some length a resolution introduced in January urging that any Bill introduced or reintroduced in the House of Commons of Canada in respect of old age pensions should make provision for: establishing an old-age pension scheme on a sound economic basis; operating such a scheme with perfect justice as between the provinces; minimizing any encouragement to waste, thriftlessness or dishonesty on the part of potential beneficiaries; the payment of an old age pension in certain cases at least to persons who have not reached the age of seventy years; and the payment by way of pension in certain cases at least of a larger sum than that designated in the bill already introduced. The debate on the resolution was adjourned.

Saskatchewan

The Saskatchewan Legislature which met on January 18 and closed on March 30, 1927, passed a number of measures of interest to labour, including an Act to provide for the "two-platoon system" in certain fire departments, and amendments to the Minimum Wage Act, the Masters and Servants Act, The Steam Boilers Act and the Factories Act.

The Fire Departments Two-Platoon Act applies, on and after January 1, 1928, to every city having a population of 10,000 or more, unless a majority of the ratepayers have voted against the adoption of its provisions, in which case the city council may still exercise the powers conferred upon it under the City Act to prescribe the duties of the fire department. In cities where no vote is taken or where a majority favours the adoption of the two-platoon system, the fire chief will divide the officers and employees of the fire department into two platoons, one for ten hours' day duty and the other for fourteen hours' night duty. Each platoon will change at least once in seven days from day to night duty or *vice versa*. No platoon may be on duty for more than 24 consecutive hours, after which period 24 consecutive hours off-duty must be allowed. Employees may, however, be required to remain in attendance during the continuance of a conflagration. No deduction from pay or holidays by reason of the provisions of the Act is permitted. A penalty of not less than $10 or more than $100 is provided for infringement of the law. This Act differs from the Bill which was introduced in 1924 only in containing the clause which provides for a vote of the ratepayers.

The amendments to the Masters and Servants Act, which will come into force on May 1, 1927, provide that a summons under the Act may be served by any adult either upon the person to whom it is addressed, or, if he cannot conveniently be found, by leaving it at his last or most usual place of abode with any inmate who is apparently sixteen years of age or over. The fee for service and return of a summons is fixed at 50 cents, with an allowance of 15 cents per mile for conveyance, or, where no public vehicle is available, reasonable livery charges.

Barber shops and beauty parlours were added to the list of establishments to which the Minimum Wage Act applies.

The Factories Act was amended to require the use of mechanical devices for removing dust, gases and other impurities from the atmosphere of workrooms.

An amendment to the Steam Boilers Act, exempts steam boilers on motor vehicles which are within the scope of the Vehicle Act unless the chief inspector of steam boilers gives notice to the owner that such of the provisions of the Steam Boilers Act as are specified in the notice apply to such boiler.

The Child Welfare Act revises and consolidates the laws of the Province for the protection of children, including those providing for Mothers' Allowances and Juvenile Courts. Two changes were made in the law governing Mothers' Allowances. The first permits the wife of an inmate of a sanitarium for tubercular patients to obtain benefits under the Act. The second requires the husband of any beneficiary to have been a resident of Saskatchewan at the time of his death or disablement.

The Town Act was revised and consolidated and a number of sections were amended, among them that relating to the closing of shops. The hours between which shops might close for half-holidays under a town by-law were formerly 1 p.m and 5 a.m. of the following day. The clause as revised provides for closing at 12 o'clock noon or such later hour as may be deemed advisable. Ladies' hairdressing, manicuring or beauty parlours are now included in the list of shops to which closing by-laws apply. A new clause forbids the sale by auction during the hours when shops are closed, of goods of the class ordinarily sold in those shops.

The City Act was amended by addition of provisions similar to the last two cited above.

The Civil Service Superannuation Act provides for the superannuation of civil servants at the age of 65 years in the case of men and 60 years in the case of women, provision being made, however, for the services of any person to be continued for a further period of five years. Contributions are made by the deduction of four per cent from the salary of each civil servant, such contributions to cease after thirty-five years service. Allowances are payable to civil servants who have completed ten years service and retired having reached the age of retirement, or owing to ill health or physical or mental incapacity. In the latter case the Civil Service Superannuation Board must declare the applicant to be entitled to superannuation. The allowance consists of one-fiftieth of the average salary for the three years preceding retirement, multiplied by the total number of years of continuous service up to thirty-five years. On the death of a superannuated civil servant one-half of his allowance is payable to his widow with an additional ten per cent for each child under 18 years of age, the total amount payable in respect of children not to exceed twenty-five per cent of the allowance. The same allowance is payable to the widow and children of a civil servant who dies after ten years service. A lump sum not exceeding the total amount of contributions with interest is payable to heirs in the case of death before ten years service has been completed.

New Wage System of Belleville Company

The American Optical Company of Canada, Limited, put into operation at the beginning of this year, a new system of payment for workers in their ophthalmic lens factory at Belleville, Ontario. The new plan is the incentive payment plan, which is in force in some other factories in Canada and the United States, with the adaptations necessary for their particular business. The shop was divided into two distinct sections or groups, the first group being paid for the work that is passed into the second group and the second group being paid for the work that is passed by the inspectors in the final inspection department. Each section has its inspection department and the operators are paid only for work that is passed by the inspectors. Each unit has what is called the day's stint and each operator knows that it is necessary for him to produce that stint each day. In other words, if a man is to produce 200 pieces a day and he has not done so by five o'clock, he must stay until five-thirty or six, or for as long as is necessary for him to complete the work. The operators know this and it is now very infrequent for a man to get so far behind in his day's production that he must stay overtime.

"The results we have obtained since the first of the year," writes E. W. Worth, manager of the company, "have been beneficial all round, as our charts show that we are now paying our employees 10 per cent more wages with 10 per cent less hours, and we are getting approximately 16 per cent higher production, with our quality reports, which are so essential in the optical business, holding up to their previous level. This latter fact shows very plainly the advantage of having the inspectors on a quality and quantity basis of payment."

REPORT OF ALBERTA COMMISSION ON FORTY-EIGHT HOUR WEEK

WHEN the Alberta Factories Act was being amended and consolidated at the session of 1926, opinion in the province was divided as to the wisdom of including in the new act a section providing for the establishment of an eight-hour working day in the industries of the province. Finally it was decided to establish, by Order in Council, a commission to investigate the subject of a 48-hour working week in factories, shops and offices (Labour Gazette, May, 1926, page 446). In the meantime it was provided that the working hours of labour in these establishments should not exceed nine in the day and 54 in the week. In accordance with this provision commissioners were appointed as follows:—

Messrs. A. A. Carpenter, chairman; Norman Hindsley, representing the employers, and E. E. Roper, representing the employees.

The commissioners recently presented reports, the majority recommending that the suggested limitation of hours should not be carried out until the other provinces have taken similar action, while the minority report recommends the immediate adoption of the eight-hour day in industries in the province.

Majority Report

To His Honour the Lieutenant-Governor in Council, Province of Alberta:

Sir,—The undersigned, being two of the Commissioners appointed to inquire into the advisability of establishing a forty-eight hour working week in the province, beg leave to report as follows:—

Under the terms of the Order in Council constituting the Commission to investigate the advisability of the adoption of a forty-eight-hour week by the various industries in the province of Alberta, it is set out, after reciting the provisions of Section 23 of "The Factories Act, 1926," that the Commissioners should "cause inquiry to be made into and concerning the questions involved in the establishment of a forty-eight-hour working week and as to the advisability of the establishment of the same with regard to any or all industries in any factory, shop, office or office building and the probable effect thereon on any such industries," and to report thereon to the Lieutenant Governor in Council.

Notices were sent by mail to the proprietors of all factories in the province, so far as the Commissioners were able to ascertain these from an examination of the records of the Bureau of Labour, and notices were also sent to the proprietors of the various hotels and departmental stores in the four larger cities. Notices were also published in the daily newspapers issued in these places, setting forth the chief objects of the inquiry and the dates and places of the sittings of the Commissioners. Sittings were held in accordance with the notices sent out and as published in the daily newspapers, these sittings being held at Medicine Hat, Lethbridge, Calgary, and Edmonton, on the 7th, 8th and 9th and 10th and 14th of December last respectively. A copy of the evidence submitted to the Commission at the various hearings and the statements filed with the Commission, either during these hearings or prior or subsequent thereto, are transmitted herewith.

It may be well to point out here the distinction between what is called a basic eight-hour day and a simple forty-eight-hour week and a straight eight-hour day and forty-eight hour week. The basic eight-hour day does not limit the actual hours of labour but merely gives the worker for eight hours, what he previously received for nine or ten or whatever hours worked, with overtime payment for the time worked beyond eight hours. The forty-eight-hour week does not limit the hours of labour to an eight-hour day, provided the total hours worked during the week do not exceed forty-eight. The straight eight-hour day and forty-eight-hour week limits the working hours to eight hours in any one day, even if a less number be worked on any other day of the week and limits the total hours worked in any week to forty-eight, so as to ensure the worker of one day's rest each week. It is a straight eight-hour day and forty-eight-hour week that the labour organizations have contended for in this enquiry, subject, of course, to relaxation in such cases as may be found to be necessary, this being decided by public authority.

The provisions of "The Factories Act, 1926," as it now stands, provide for a nine-hour day and a fifty-four-hour week. According to the terms of the Commission, the scope of this inquiry is limited to a forty-eight-hour week alone, and the notices first sent out so set out the nature of the inquiry. However, as the Commissioners subsequently learned that it was the desire that the scope of the inquiry should be enlarged so as to include the question of the advisability of a straight eight-hour day and forty-eight-hour week, the Commission, at the sittings at Calgary and Edmonton, asked the parties appearing before it in these cities to consider

also the question of this further restriction of the hours of labour. Subsequent to these sittings notices were sent out to all parties attending at the various hearings, asking that they further consider the question of the straight eight-hour day as applicable to their respective industries and that they communicate with the Commission in regard thereto, and replies were received from practically all those appearing at the various hearings. The straight eight-hour day, along with the forty-eight-hour week is, of course, more restrictive than the forty-eight-hour week alone, and it could, no doubt, have been taken for granted that when an objection was lodged to the latter limitation, it would apply with as much, if not greater force, to the former restriction. As was expected, the replies received in answer to the later inquiry of the Commission indicated even more strenuous objections on the part of the employers to the eight-hour day than to the forty-eight-hour week. In view, however, of the conclusions arrived at by those of your Commissioners who have signed this report, any distinction between these two forms of limitation of hours, so far as this report is concerned, is immaterial.

The enactment of eight-hour day and forty-eight-hour week legislation was supported at the various hearings of the Commission by representatives of organized labour, and the contentions in support of the proposed change may, in the main, be given as follows:—

That the bringing into effect of an eight-hour day and forty-eight-hour week would be merely carrying out the provisions as to hours of labour of the draft convention adopted at the International Labour Conference held in Washington in 1919, which provisions have already been adopted and enacted by a considerable number of countries and that, as, under The British North America Act, the power to enact legislation regarding hours of labour, in the main, rests with the respective provinces of the Dominion, the province of Alberta should, for the purpose of carrying out the terms of this convention, enact this eight-hour day legislation.

That, so far as hours of labour are concerned, a very large percentage of the industrial concerns of the province are already on the basis of an eight-hour day or forty-eight-hour week, and the employers in the remaining industries should be made to put their industries on the same basis.

That, by adopting the proposed legislation, it would protect the employer who worked his employees shorter hours from the competition of the employer who worked his employees long hours.

That, with the reduction of hours, there was a tendency towards greater efficiency on the part of the employee and that the employers should suffer little from the change.

That the shortening of hours of labour would tend to provide employment for a greater number of men and so decrease unemployment.

That the same arguments have been advanced against any proposal to reduce hours in the past and industry has survived although the hours of labour have been greatly reduced.

The desire of the worker to secure himself more leisure time was also stressed.

The general objections on the part of the employers are set out in the memorandum filed with the Commission and are given below:—

That to bring into effect forty-eight hour week legislation would give other provinces and countries an unfair advantage in competition with Alberta.

That such industries as are capable of doing so, already work forty-eight hours a week and some less.

That for many of our most important industries it is impossible to regulate hours of labour to comply with the said restriction.

That many industries closely connected with agriculture cannot comply with a forty-eight hour working week without inflicting hardship and, at certain periods, heavy loss upon their farmer clients.

That to enact a forty-eight hour working week would at once restrict an investment of foreign capital in this province.

That our resources cannot be developed, nor can industrial plants be built up sufficiently to create a pay roll within our borders that will provide a market for the agriculturists whom we constantly invite to settle amongst us.

That reduction of hours generally means reduced production and higher prices to the ultimate consumers.

That reduced hours will lead to the introduction of labour saving machinery that will eventually reduce the number employed.

The Draft Convention adopted by the International Labour Conference at Washington in 1919, and referred to by the supporters of eight-hour day legislation, provides for the limiting of the hours of workers in industrial undertakings, to eight in the day and forty-eight in the week. Provision is made that where the employers and workers agree, the eight-

hour day limit may be exceeded some days of the week, where less than eight hours are worked during other days of the week, provided the hours worked weekly do not exceed forty-eight. Other exceptions provide that where, by reason of the nature of the process, the work is required to be carried on continuously by a succession of shifts, the working hours may be extended to fifty-six in the week on the average. Provision is also made under which regulations by public authority shall determine the permanent exceptions to be allowed any proprietor for work that must necessarily be carried on outside the limits laid down for the general working of an establishment, also for certain classes of workers whose work is essentially intermittent and for temporary exceptions for exceptional cases of pressure of work. Commerce and agriculture are not included under the terms of the convention.

It was generally recognized at the Washington Conference, that the question of the limitation of hours of labour was practically a world wide one and the difficulty was there recognized of dealing with the question satisfactorily unless all those countries which had any considerable interest in industrial undertakings should be willing to adopt legislation of at least approximate uniformity, subject, of course, to allowance for differences of climatic conditions or of industrial development. Particularly was it realized that without the great industrial countries of Great Britain, France, Germany, Italy and the United States adopting the provisions of the convention, the work of the conference must be largely futile. Up to the present, none of the countries mentioned have adopted the hours of labour prescribed by the draft convention. It is true that France has signified its ratification, but it is conditioned upon the ratification by Germany. Italy ratified the convention conditionally in 1924, but has now adopted a nine-hour day.

It was stated at the sittings of the Commission in Edmonton that Greece, Czechoslovakia, Bulgaria, Chili, Roumania, China and India have ratified the convention. Your Commissioners have before them the last report of the Director of the International Labour Conference issued at Geneva in 1926, and it would appear that of these countries Roumania, although it had signified its ratification, had not, as late as March of last year, passed any legislation making effective the eight-hour day provisions. India, by the terms of the convention, is not required to adopt an eight-hour day but only a sixty-hour week. Bulgaria, in the report just mentioned, stated that competition from neighbouring countries that had not adopted the proposals of the Washington conference, had placed it in a disadvantageous situation. China is in such an unsettled state that little weight can be attached to its adherence or non-adherence.
